## USES MADE OF OUR FORESTS

168,000,000 MILLION ACRES OF NATIONAL FOREST RESERVES

Uses to Which It Has Been Put to and the Income From It as Shown by this Report From the National Forestry Division.

The actual use of the varied resources of the government's 168,000,000 acres of national forest land is on the increase, according to the report of the work for the fiscal year 1928. The report says that from an administrative standpoint the most striking fact of the year was the remarkable increase which took place in the volume of business transacted. This growth in business done by the United States forest service last year over the previous year is partly brought out in the following statement showing percentages of increase in the number of timber sales, 236 per cent; in the amount of timber cut under sales, 192 per cent; in the number of free timber permits, 75 per cent; in the number of grazing permits, 11 per cent; in the number of special use permits, 67 per cent. That the additions to national forests and new creations caused this increase only to a small extent is shown by the fact that the area increased is only 11 per cent. In speaking of this feature of the work of the forest service in his annual report, Secretary of Agriculture says in part:

"The growth in the volume of business arising from use of the forests has created a very serious administrative problem. Last year 78 per cent of the time of the administrative and protective force was taken up by the demands of national forest business. The average forest area to each officer supposedly available for patrol duty was about 120,000 acres; but with more than three-fourths of the time of these officers occupied with timber-sale, grazing and other business, the force actually available for patrol was equivalent to about one man to each 500,000 acres. That under these circumstances the fire losses in a year of exceptional danger were kept down to a very small figure in comparison with the value of the timber exposed and the damage from forest fires elsewhere is a matter of congratulation.

"The risk incurred, however, is out of all proportion to the added cost which more adequate protection would involve. I am convinced that the provision made for the care and use of the national forests has become inadequate to their needs, and I have therefore submitted estimates for the fiscal year 1910 which asks for a substantial increase in the appropriation. With the further growth in business which is certain to take place during the present year, even less protection can be given than has been given in the past. Indeed, the point has now nearly been reached at which it is not even a choice between providing for the needs of those who would use the forests and protecting the forests themselves."

Kluger, the Jeweler, 1069 Virginia Ave., Indianapolis, Ind., writes: "I was so weak from kidney trouble that I could hardly walk a hundred feet. ## Now is the time to visit California

When summer has passed in these northern states, the sun is only mild under the bright blue skies of Southern California. This is one of nature's happy provisions — eternal summer for those who cannot endure a more severe climate. California has been called the "Mecca of the winter tourist." Its hotels and stopping places are as varied as those of all well regulated cities. Visitors can always find suitable accommodations, congenial companions, and varied pleasing recreations.
