NO DUTY. George W. Wilson was rehearsing with Edwin Booth at the Boston museum. Wilson, in one scene, asked the star where he should stand. "Where do you usually stand?" asked Booth. "Mr. Barrett had me over there," answered Wilson. "Yes," mused Barrett, "I usually have him there"—indicating the other side of the stage. "Suit yourself—I'll find you wherever you are," said Booth.

Household Remedy

Taken in the Spring for Years.

Ralph Rust, Willis, Mich., writes: "Hood's Sarsaparilla has been a household remedy in our home as long as I can remember. I have taken it in the spring for several years. It has no equal for cleansing the blood and expelling the humors that accumulate during the winter. Being a farmer and exposed to bad weather, my system is often affected, and I often take Hood's Sarsaparilla with good results." Hood's Sarsaparilla is Peculiar to itself. There is no "just as good." Get it today in usual liquid form or tablets called Sarasatabs.

POULTRY KEEPING PROFITABLE.

Prof. Dryden of O. A. C. Advises Farmers to Increase Flocks.

Oregon Agricultural College, Corvallis.—"There has been an enormous increase in the production of eggs and poultry in the state in the past two years, but in spite of this the demand has far exceeded the supply, and prices are still as high as ever," said Professor James Dryden of the Oregon Agricultural College in discussing the subject of the present tour of the poultry demonstration car sent out over the Southern Pacific lines by the college.

"If the farmers of Oregon would keep, on an average, 100 hens instead of about 50, it would shut out the imports and add \$4,000,000 or \$5,000,000 a year to the wealth of the state. The purpose of the demonstration car is to stimulate a greater production of poultry and eggs. The quickest and best way is to increase the flocks of the farmers rather than to have poultry keepers start large egg farms. The demand cannot be met by the establishment of large, exclusively poultry farms. If the general farmer goes out of the egg producing business there will soon be an egg famine—possibly a serious financial panic.

"Though there are opportunities for profit along special lines in poultry-keeping, the market for specialties is limited, and it would be folly to advise everyone to go into special lines. I am free to confess that we have kept more people out of the poultry business than have gone into it as an exclusive business. I have received great numbers of letters during the past year from all parts of the state as well as from other states, in which the writers stated that they were going into the poultry business on a large scale, and a large majority of them said they knew nothing of the business. Our plain duty was to advise caution. If every one of them had gone into the business as they intended and invested their all in it, it is safe to say that there would have been thousands of dollars lost in every county of the state, and the poultry business would have received a black eye.

"Poultry keeping is not a difficult business unless we make it so. If conducted along sane, common-sense lines, there is profit in it. The two points on which special emphasis is laid in the demonstration car are feeding for eggs and housing. Egg rationers are on display, feeding charts show results of experiments, breeding charts show results of breeding for eggs, different grades and qualities of eggs are exhibited, marketing possibilities are demonstrated, and the equipment for successful hatching and brooding of chicks is displayed. The walls of the car are covered with signs and charts containing lessons in practical poultry keeping. A 'knock down' colony house is taken along and set up outside the car at each stop.

"While chickens may be made to do well in different houses, it may be said in favor of the colony system and free range that there is no noted poultry district in the United States where poultry-keeping has been permanently successful, where the colony house system was not followed. The colony house, moreover, was the house used at the Oregon Experiment Station last year for the hens that made the highest egg records ever made in the United States so far as official or authentic record is concerned. The demonstrators on the car explain how those hens were housed and cared for, and answer any questions as to their feeding and treatment."

DRY FARMING ALFALFA.

Prof. Scudder Sees Big Possibilities in Alfalfa Seed.

Oregon Agricultural College, Corvallis.—The growing of alfalfa on the dry farming lands of Oregon in cultivated rows for the production of seed has been the special dry farming hobby of Prof. H. D. Scudder of the Oregon Agricultural College. He has advocated this plan widely through Eastern Oregon for the past five years, and is beginning to see practical results on a large scale. A prominent wheat farmer at Arlington has planned to put in 100 acres of alfalfa on his dry land, and has asked the agronomy department of the college for special instruction and the best seed. Another man, one of the largest wheat farmers in Gilliam county, is to put in 1,000 acres of alfalfa this spring. The great number of letters coming to Prof. Scudder from all parts of Eastern and Central Oregon on this subject indicates the first great change for the better in dry farming agriculture there.

FENCES INCREASE VALUATION OF FARM LANDS CONSIDERABLY

When Well Fenced and Divided Into Convenient Fields and Lots \$10 Per Acre Is Added to Value of Property—Nothing but the Very Best of Material Should Be Used.

(By H. F. GRINSTEAD.)

Any farm is worth \$10 per acre more when it is well fenced and divided into convenient fields and lots. As there is more or less work and expense entailed in getting a good hog-tight fence in place, one should get only the best material, and spend more time in setting and stretching than when the common barbed wire is used.

Woven wire, even of the 26-inch width, exerts several times the strain as that of the three-strand barbed wire, and the corner-posts must be of good size, and well braced.

Posts cut in the winter and allowed to season till the summer before being set will be more satisfactory, but this plan is not always practicable.

We have used posts a rod apart on our farm, but I have learned from experience that that is too far and now I am putting them 12 feet apart.

Set the corner or end posts first, then drive the others in line between them by stretching a wire on the ground. This wire must be stretched tight; and in driving do not let the post touch the wire, as it would push it out of line.

The work of "getting ready" is the most important item in making this kind of fence, since a quarter of a

Corner Post Anchored.

mile may be stretched and stapled by two men after everything is in place and the posts set.

Set corner posts at least three feet in the ground, and brace to overcome the direct tension of the wire as well as the tendency to pull up.

Eight or ten feet from the corner posts set the stray post, against which the corner post is to be braced. Cut a big square notch in this post a foot from the ground, to receive the end of the brace, and a similar notch should be cut in the corner post three feet from the ground to receive the other end.

This will throw a large part of the strain on the stray post, but in order to make this more effective, and overcome the tendency to pull upward on the corner post, a double strand of smooth No. 10 wire is put around both posts from the top of the stray post to the bottom of the corner post, or

Gate Well Braced.

approximately at right angles to the brace, then twisted tight with a short stick.

The brace should not be less than six inches in diameter, and squared at the ends.

There is yet another way of bracing corner posts, to be commended for its simplicity and low cost where timber is scarce. It is best suited for back fences, where there is no passing around the corners.

This is an anchor placed in line with the fence for an end post, but where there is a corner it is midway between, or at an angle of 35 degrees with either line.

A pit two feet deep and a foot wide and four inches long is dug back six feet from the post to be braced. A log or chunk three feet long is buried in the hole, two strands of No. 9 wire tied around the middle of it, then secured to the top of the posts.

When this log or "dead man," as it is called, is covered and well tamped, the wire from it to the post should be twisted till the post leans slightly, then when the wire is stretched the post will give sufficiently to put it back straight.

One may think that this anchor would pull up, but there is no danger if it is put in two feet, and the wall of the pit straight down, or a little caved, with a notch cut in the bank for the wire to make a straight pull toward the top of the post. This form of brace tends to pull the post down—rather than up, as is the case with the other braces.

For a yard fence where appearances count for more than in other places, the brace may be hidden. A hole is dug to the desired depth, being as long as the distance between the posts the stay post being set in one end, and the corner post in the other.

A brace is fitted in tight between them in the bottom of the hole, and the dirt filled in, then another is put

in the same way at the surface of the ground.

A modification of the anchor brace is made by running the wire from the top of the second or stay post to the bottom of the corner post, then setting horizontal brace between the posts near the top.

For a good fence I prefer to have the posts set in the early spring and

Anchor Brace.

stretch the wire a month later, after the posts have settled, and the weather becomes warm.

There is considerable contraction and expansion due to heat and cold, so a fence stretched in midsummer is more likely to remain tight. In stretching the wire, always fasten the stretcher to the end or corner post, and not to some object beyond, just because it is more convenient.

I have tried this and know that unless the end posts receive the tension when stretching, they will give as soon as the stretcher is removed. A stretcher with two levers, one at the top and another at the bottom is the best type, since on uneven ground the wire may be stretched to conform to the surface.

The most important thing in the construction of a fence is having posts well set, for without this it is impossible to stretch heavy woven wire. Never try to stretch more than 40 rods at once, and if this is four-foot wire it will require enormous tension. A part of the crimp should be drawn out of the wires. Nail to every

Brace and Wire. A, Corner Post; B Stay Post.

post, but not to every wire. Staple a part of them to one post, and the alternate ones to the next post.

Make substantial gates, light though strong. Our gates are 1 by 4 lumber and usually 10 or 11 feet wide. In order to save waste, get 16-foot lumber.

Seven pieces of that length, and one ten will make the gate without any waste. There should also be another piece a foot wide and ten feet long which may be sawed in two and nailed, one piece on either side where the hinges are bolted on.

The gate may be made 11 feet long and five feet high by cutting the 16 foot lumber this way, the short pieces being used in pairs for the uprights, one piece being sawed into two eight foot pieces for the diagonal brace. These short braces are better than

Invisible Braces.

when run the full length of the gate, and the extra pair of uprights keep the gate straight.

Good hinges should be bolted on and bolts used in putting the gate together.

Poultry Farms.

Despite the handicap of high-priced grain, it appears that the highly specialized poultry farms are able to stand present conditions fully as well as the individual farms. At any rate, the large producers are likely to study the question more closely, and perhaps they are able to figure out a profit, everything considered, where the farmer is scared by the high cost of production.

Making Hens Lay.

To make them lay keep them comfortable and busy, but don't overfeed. More pullets refuse to lay from being overfed than underfed. Our pullets get two regular feeds a day, a hot mash in the morning, grain for supper, with a scratch at noon.

Stimulate Children?

Ask your doctor how often he prescribes an alcoholic stimulant for children. He will probably say, "Very, very rarely." Ask him how often he prescribes a tonic for them. He will probably answer, "Very, very frequently." Then ask him about Ayer's Sarsaparilla as a strong and safe tonic for the young. Not a drop of alcohol in it.

Always keep a box of Ayer's Pills in the house. Just one pill at bedtime, now and then, will ward off many an attack of biliousness, indigestion, sick headache. How many years has your doctor known these pills? Ask him all about them. Made by the J. C. AYER CO., Lowell, Mass.

Raft of Cocoanuts.

In the Philippine islands one frequently sees a raft of cocoanuts being floated down the river to market. The buoyant nuts are closely packed into a circle, braced across with bamboos, and tied with fiber; and the queer craft, with its native paddler, is then ready for the trip down stream to a point where the raft will be broken up and the cocoanuts sold.—Wide World Magazine

RED CROSS BALL BLUE.

The blue that is all blue. Best for washing because it makes the clothes clear and white, lasts longer than liquid blue and produces better results.

Avoid liquid bluing because it is only a weak solution of blue in an expensive package. RED CROSS BALL BLUE is sold everywhere. Price, 10c. ASK YOUR GROCER.

Peasant Woman in Hard Luck.

A peasant woman of Budapest, Hungary, drew \$40 from a savings bank, and, on her way home, bought a tame hare for her children. For safety she tethered the hare with a handkerchief in which she had rolled the notes, but the animal managed to get away—tether and money and all. The poor woman in her despair hanged herself next day.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

FREE ADVICE TO SICK WOMEN

Thousands Have Been Helped By Common Sense Suggestions.

Women suffering from any form of female ills are invited to communicate promptly with the woman's private correspondence department of the Lydia E. Pinkham Medicine Co., Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence. A woman can freely talk of her private illness to a woman; thus has been established a confidential correspondence which has extended over many years and which has never been broken. Never have they published a testimonial or used a letter without the written consent of the writer, and never has the Company allowed these confidential letters to get out of their possession, as the hundreds of thousands of them in their files will attest.

Out of the vast volume of experience which they have to draw from, it is more than possible that they possess the very knowledge needed in your case. Nothing is asked in return except your good will, and their advice has helped thousands. Surely any woman, rich or poor, should be glad to take advantage of this generous offer of assistance.

Address Lydia E. Pinkham Medicine Co., (confidential) Lynn, Mass.

Every woman ought to have Lydia E. Pinkham's 80-page Text Book. It is not a book for general distribution, as it is too expensive. It is free and only obtainable by mail. Write for it today.

Try once more if you have been doctoring with this one and that one and have not obtained permanent relief. Let this great nature healer diagnose your case and prescribe some remedy whose action is quick, sure and safe. His prescriptions are compounded from roots, herbs, buds and barks that have been gathered from every quarter of the globe. The secrets of these medicines are not known to the outside world, but have been handed down from father to son in the physicians' families in China.

CONSULTATION FREE. If you live out of town and cannot call, write for symptom blank and circular, enclosing 6 cents in stamps.
