ELL your dealer you want L to see a Fisk Tire beside any other he offers you. He has it in stock or can get it. See for yourself what the Fisk Tire has to offer in extra size and strength, howits resiliency compares when you flex the tire under your hand, how the depth of the non-skid tread looks beside other treads. This is the way to buy tires!

There's a Fisk Tire of extra value in every size,

## GREAT DISCOVERY BY YOUTH

Experiments of Seventeen-Year-Old Laxon Gave Dresden China to an Appreciative World.

a king's faith in the transmutation of metals and the skill of an apothecary's seventeen-year-old son caused the discovery of the celebrated Dresden ware. The king was Augustus of Saxony and the boy was Bottiger, who composed a tincture that was supposed to be capable of being transformed inmuch fun for Bottiger, for the king locked him in a complete laboratory and refused him freedom, "O'Dair" writes in the Milwaukee Sentinel. The restraint almost unbalanced the boy's mind. "He foamed at the mouth and knocked his head against the wall and trembled so violently that two soldlers could not hold him. And he drank 12 cans of beer a day without getting drunk," It was thought advisable to move the boy to Dresden and give him certain liberty. While continuing his experiments there he discovered the Meissen porcelain, commonly called Dresden china. This discovery rejoiced Augustus and he spent large sums in constructing the Japan palace. Many workmen came from Delft to make the new ware and soon all Europe was buying Melssen.

In gratitude the king gave Bottiger his freedom, a ring with his effigy, two apes, a young bear and credit with the royal banker, and in addition the profits from the porcelain factory for

But what do you think! Bottiger died of dissipation at the age of thir-

#### FOUND HIS PROBLEM SOLVED

Stroke of Luck Said to Have Come to Man at Work on Idea of Unsinkable Boat

Among the "accidental" inventions may be mentioned the lifeboat. In the course of a country stroll William Wouldhave, the inventor of the selfrighting lifeboat, came across a woman who asked his help in lifting a heavy vessel of water just drawn from the well. On the surface of the water there floated the broken half of a wooden bowl.

Wouldhave was drawn into conversation, and like many another man who cannot keep his hands quiet while he talks, he idly toyed with the floating piece of wood. Naturally he turned it over and found to his surprise that it immediately righted itself. He inverted it again, with the same result; and since he was at the time actually at work on the problem of an unsinkable boat he immediately realized the importance of his chance discovery.

It is an experiment that anyone can readily make for himself. All one requires is the fourth part of a hollow "prolate spheroid"; or to put it in more homely language, the quarter of Put the shell in a bowl of water and face downward,-New York Times.

Early Workers in Copper.

From the very remotest times copper has been a favorite with metal workers. The Assyrians, Egyptians, Persians and Greeks were fine metal workers and claim some of the best specimens of the art, including the hand-hammered copper statue of Pepi I, a great Egyptian king, who reigned in 2600 B. C.

Another great work of art is the Great Gate of Chalmaneser II, an Assyrian king contemporary with Ahab of biblical times. The British museum contains a masterpiece of hand-hammered copper known as The Sirus-a pair of shoulder pleces for a suit of armor, picturing a Greek warrior and an amazon in combat.

Scores of European cities-particularly in Belgium-have beautiful statuary, roof ornamentations and other large pieces of hand-hammered

Insulated Shovel.

Where inborers are at work on an electric railway of the third-track class there is always danger if ordinary tools are employed, for the touching of the third rail with a pick, shovel or crowbar may lead to fatal results. There was patented some time ago a tool which is insulated for the purpose of protecting the workmen on electric railways. In the case of the usual shovel there is placed an insulating sleeve over the metallic handle so that there is no possibility of grounding the current through the workman should the tool come into accidental contact with the "live" rail. Furthermore, there is made use of an insulating material of some distinct color, which is an additional precaution.

Adjustable Curve. There is a most ingenious drawing instrument for making curves, which was invented by a Massachusetts man. This device consists of a bow, a flexthle rule pivoted at its ends to the ends of the bow and having a pair of inwardly extending studs, a flat reinforcing spring contracting with the inner side of the rule and having slots receiving the studs and a screw-threaded adjusting device extending between the center of the spring and the bow. By adjusting the screw-threaded member the curve may be changed to meet all requirements within the range of the instrument. Perhaps the greatest application of this device is in laying parabolas of varying sizes.

### ANCIENT BUILDING A MARVEL

Magnificence of the Labyrinth Greek Writer, Herodotus, Found Almost Beyond His Description.

The ancient Egyptians had at Arsince, near Lake Moeris, in the Fayoum district, west of the Nile, one of the most noted buildings ever in the world -the Labyrinth. There was one on the Island of Lemnos, in the Aegean sea; another on the island of Crete, in the Mediterranean, and one in Italy. to gold. But being a genius wasn't But that of Egypt was by far the most

Myth, tradition, legend, mystery and awe are to be found in obscure sayings about it in remnants of Greek classical literature. It was composed of 3,000 chambers, 1,500 below the earth's surface and 1,500 above. The grand hierophants permitted Herodotus to enter some of the chambers above, but not below. The Greek writer could scarcely find words with which to describe the beauty and splendor of the famous edifice. He says: "The upper chambers I myself vis-

ited, and I pronounce them among the grandest efforts of human industry and art. The almost infinite number of winding passages through the different courts excited my highest admiration; from spacious halls I passed through smaller chambers, and from them again to large and magnificent saloons almost without end. The walls and cellings are marble, the latter embellished with the most exquisite sculpture; around each court pillars of the richest and most polished marble are arranged.

"At the termination of the Labyrinth stands a pyramid 160 cubits high, approached by a subterranean passage, and with its exterior enriched by huge figures of animals."-Edgar Lucien Larkin in Seattle Post-Dispatch.

#### TELL OF WEATHER'S CHANGE

Many Flowers Give Warning of the Coming of Rain, if One Will Stop to Observe Them,

Many flowers are said to be excellent barometers. For instance, it is when the blooms of dandelions have seeded and are in the fluffy, feathery condition that the weather prophet faculties come to the fore. In fine weather the ball expands to the full, but when the rain approaches it shuts up like an umbrella. If the weather is inclined to be showery, it keeps shut up all the time, only opening when the danger from the wet is passed.

The ordinary clover and all its varietles, including shamrock, are also barometers. When rain is coming the leaves shut together like the shells of an oyster. For a day or two before rain comes their stems swell to an appreciable extent, and stiffen so that the leaves are borne more uprightly than usual. This stem swelling when rain is expected is a feature of many flower-

The figures or which the leaves of the horse chestnut are made up keep flat and fanlike so long as the fine weather is likely to continue.-Cleveland Plain Dealer.

Wild Oats That Travel.

We are all more familiar with "wild oats" in a moral than a botanical sense, yet in the latter it is an article of no small curiosity.

For one thing, it has a semi-inherent power of moving from one place to another. Let a head of it be laid down in a moistened state upon a table and left there for the night, and the next morning it will be found to have walked away.

This locomotive power possessed by wild oats resides in the peculiar hard "awn," or spike, which sets the grain a-tumbling over and over sideways.

A very large and coarse kind of wild oats, brought many years ago from Otaheite, was found to have this ambulatory character in uncommon perfection.

If ordinary cultivated outs are allowed to degenerate, they revert to their former state, and acquire this among other characteristics.-London

Three Pithy Paragraphs.

I have never yet heard man or woman much abused that I was not inclined to think the better of them; and to transfer any suspicion or dislike to the person who appeared to take delight in pointing out the defects of a fellow creature.-Jane Porter.

I do not want to see the time come when any group in this country will become so powerful and strong that by its power it may work or create conditions of suffering among some other group.-Hugh Frayne.

One of the silliest of human delusions is the idea that time will bring sverything out all right. Haven't you heard people get that off-and then proceed to do nothing whatever with time?-John M. Siddall.

Authors' Noms de Plume.

Artemus Ward and Mark Twain were literary examples of adopted names, writes Frederic J. Haskin in the Chicago News. Henry M. Stanley, the African explorer, was originally John Rowlands. For euphony in authorship, James B. Taylor became Bayard Taylor and James B. Matthews became Brander Matthews. Ulysses S. Grant began as Hiram S. Grant, Grover Cleveland as Stephen G. Cleveland and Whitelaw Reid as Jacob W.

Use of Oil Long Ago.

Oil from natural springs in Sicily was used in lamps in the temple of Jupiter at Rome and oil-fed lamps were burned in other temples and in rich men's homes.

### HOW SOUND IS TRANSMITTED

Vibration of the Air Brings It to the Ear-Travels Faster in Summer Than in Winter.

Sound is transmitted to the ear by the vibration of the air. When one particle of air is made to vibrate it sets the adjacent particles to vibrating, and so a sound wave, if not obstructed, passes in all directions from the sounding body. The calculated velocity of sound in the air when the temperature is at freezing point is 915.69 feet per second. When the temperature increases, sound travels faster, and the rate has been calculated at a little more than one foot per second for each degree of rise in Fahrenbeit's thermometer. Contrary to popular bellef, sound travels faster in summer than in winter, and in warm than in cold climates. It might be thought that sound would travel more slowly through a dense atmosphere, but the elasticity increases as rapidly as the density, and, therefore, the velocity of sound is not affected by varying density. The velocity of sound in water, when at the greatest density, is 4,707.4 feet per second. The experiments by which this velocity was de termined were made by M. Callaodin. in 1826, across the Lake of Geneva, from Rolle to Thonon, a distance of about nine miles. Water, therefore, transmits sound four times as fast as

#### NO OLD AGE PROBLEM HERE

Indians of the Andes Mountains Kill Those of Race Who Reach Fateful Limit.

High in the fastnesses of the Andes mountains of Peru there lives a race which sets an age limit and kills all of its people who reach the fateful mark. In each village an official is appointed to terminate the careers of persons who live too long.

Different communities, however, have different ideas as to what limit should be placed on human existence. In some places the only duty of the executioner appears to be to secure the presence of a man at his own funeral in the "title role." If a person becomes so ill that his funeral becomes a certainty in the near future, a date is fixed for the same, and if the leading figure shows a disposition to be unpunctual, the village executioner takes the matter in hand.

The Andes natives are of Indian descent, possibly from the Quichau Indians, according to scientists. They live in adobe hovels and are said never to remove their clothing. They are very shy and have no diversions aside from chewing coca leaves, from which modern scientists extract cocaine.

Improved Range Finder.

The largest range finder in the world is more than twice the size of any used during the war, and has been constructed in England for use in coastal defense, says Popular Mechanics Magazine. It was designed by the two original inventors of the range finder that has been in use in the British navy for many years, and that consists of a horizontal tube carried on a central frame, which rotates with the tube on a pedestal.

New Powerful Machine Gun.

Remarkable possibilities are concelvable in connection with a powerdriven machine gun, said to have originated in Germany, but which is now being developed in this country, says Popular Mechanics Magazine. Besides having several advantages over other machine guns, it is, or rather will be when it is fully developed, driven entirely by external power, such as an electric motor, or a gasoline engine.

"Original Package."

In American constitutional law this means the package in which goods are shipped from one state to another. The United States courts held that where an article is imported into one state from another, it does not lose the protection of the interstate commerce clause, while the original package remains unbroken and is the property of the importer. Interpretation of these decisions made it possible to evade state laws by selling direct to the customers in "original packages." The importance of this is in its bearing on the sale of cigarettes and other commodities about which state laws differ.

Guilty Suffer Doubly. Guilt has always its horrors and

solicitudes; and to make it yet more shameful and detestable, it is doomed often to stand in awe of those to whom nothing could give influence or weight but their power of betraying.-John-

## NOTICE TO CDEDITORS

Notice is hereby given, that the undersigned, by order of the County Court of Polk County, Oregon has been appointed Administrator of the Estate of Louisa J. Bezanson, deceased, and has qualified.

All persons having claims against the said estate are hereby required to present them with proper vouchers within six months from the date of this notice to the said Administrator at Independence, Oregon, in said County of Polk.

Dated and first published June 30th 1922.

W. B. CUTHBERT Administrator of the estate of Louisa J. Bezanson, Deceased. D. E. Fletcher, Attorney for the estate

#### LEGAL NOTICES

NOTICE TO CREDITORS

Notice is hereby given that the undersigned C. W. Irvine, has been appointd by the County Court of the State of Oregon for the County of Polk Administrator of the Estate of Jane B. Constance, deceased, and has qualified.

All persons having claims against the said Estate are hereby required to present them, with the proper vouchers, within six months from the date of this notice, to the said Administrator at the Farmers State Bank of Independence, Oregon in said county and state.

Dated and first publication June 16, 1922.

C. W. IRVINE Administrator of the Estate of Jane B. Constance, Deceased. D. E. Fletcher, Attorney.

EXECUTOR'S NOTICE

Notice is hereby given, to whom it may concern, that the undersigned C-W. Irvine has been duly appointed executor of the last will and testament of Henry C. Constance deceased, by the honorable County Court of Polk County, Oregon, and has qualified.

All persons holding claims against said estate are hereby notified to present the same to the undersigned, duly verified, on or before six months from the date hereof and all persons knowing themselves indebted to said estate are hereby to make immediate settlement of the same, with the undersigned executor.

Dated and first publication June 16th, 1922.

C. W. IRVINE Executor of the Estate of Henry Constance Deceased, Independence, Oregon. D. E. Fletcher, Attorney for Estate
