**POLK COURT ADMITS SEVEN NEW CITIZENS**

Dallas—Seven new citizens were admitted by Judge H. H. Belt at the opening session of circuit court. They are Ole Fryberg, Swede, Dallas; Vincent Mauer, German, R. 1, Dallas; Mrs. Pauline Aulen, French, Dallas; Otto Schlessner, German, Grand Ronde; Edward Becken, Canadian, Independence; Jacob Wildt, Canadian, Broadmead. Henrich Schmidt, Canadian, was denied citizenship because it developed during his examination that he had moved back to Canada and resided there for eight months during the past five years. The petition of Peter Berzel, a German, was dismissed for lack of appearance by the petitioner for three successive terms of court.

**POSTMASTER FISK'S BROTHER NOW GENERAL**

Dallas—One of thirteen colonels of the United States regular army who were recently promoted to be brigadier generals on the permanent list is Harold B. Fiske, brother of Post-

master V. P. Fiske and son of Mrs. Charlotte Fiske, of this city. General Fiske has been assigned to the training and operations division of the general staff. During the World war he held the temporary rank of brigadier and served on the staff of General Pershing. General Fiske visited his relatives here a short time early the past summer.—Itemizer.

**RALPH WILLIAMS IS TENDERED FEDERAL POST**

Ralph E. Williams of Portland and Polk county's big republican, has been tendered the position of assistant secretary of the treasury by Secretary Mellen.

Mr. Williams is republican national committeeman from Oregon and has taken an active part in national affairs for years. He is heavily interested financially in Dallas, being president of both banks there.

Mr. Williams is undecided as to whether he will accept the appointment. Phone your news items to the Enterprise office.

**NEW YORK IN FIRST PLACE**

American Metropolis Has Crowded Out London as the Largest City in the World.

New York has surpassed London in population, according to the New York city census committee, if the same radius of territory is included within the New York city limits as is calculated in the London figures. In a statement issued by Dr. Walter Laidlaw, executive secretary, figures show that within a radius of nineteen miles of the city hall there was on January 1, 1920, a population of 344,568 more persons than in the metropolitan police district of "Greater London," says the New York Herald.

Greater London, it is explained, includes not only London county, but an "outer ring" in which the metropolitan police have specified powers and duties.

The Greater London suburban area, irregular in outline, extends as far in some directions as nineteen miles from Charing Cross," says Dr. Laidlaw. "It seems proper, therefore, to include in comparing Greater London and New York suburban territory within nineteen miles of the city hall."

This radius reaches Tottenham, Staten Island; part of Westchester and Nassau counties, and the part of New Jersey that includes Newark, Jersey City and other large population centers immediately adjacent to New York.

The population of Greater London on June 19, 1921, was 7,476,168, while that of "Largest New York," including the outlying districts, on January 1, 1920, was 7,820,676. London increased in the thirty years between 1891 and 1920, 1,844,362 persons, while Largest New York increased, between 1900 and 1916, 1,879,546 persons.

**SIAM HAS LEPER "VILLAGE"**

Plague-Stricken Patients Fill Offices in the Town Government and Assist in Work.

A progressive Siamese leper "village" is described by the Bangkok correspondent of the London Daily Mail. Wonderful progress has been made during recent times with regard to the treatment of lepers in this neighborhood, many scores having been housed at the Chingmal leper asylum, which was established with the joint aid of the Siamese government and the mission to lepers some thirteen years ago.

This asylum is run on the lines of a Siamese village, with a village headman chosen by the lepers themselves. The leper has been made to think that he is still a useful citizen of the state, and not a social outcast as heretofore. They work under their headman, look after the roads, and attend to the clearing of the jungles.

There are two schools within the settlement for children of the lepers and the attendance is good, despite the fact that most of the pupils suffer from the terrible disease. The plague-stricken boys and girls, with their nerveless, deformed fingers, work as hard as their more fortunate leper-free schoolmates in the other school of the asylum.

The asylum has its own currency, so that the coins can be avoided by the outside world.

**Steam Shovels Disturb Indians' Sleep.**

The slumbers of prehistoric Indians buried in the Southwest before the time of Christ will be rudely disturbed this summer by the raucous growl of the modern steam shovel.

Self-dumping cars, trackage, derricks and other up-to-date paraphernalia will be used for scientific excavation in the ancient Pueblo Bonito, in Chaco canyon, by Dr. Nell M. Judd, curator of American archeology of the Smithsonian Institution.

Doctor Judd left Washington to conduct this work under the auspices of the National Geographic society. He thinks his work may result in connecting the period in which these Pueblo Indians lived with the Mayan race in British Honduras, of whom there is record as far back as 95 B. C.

**Mosquitoes Dislike These Odors.**

Where mosquitoes abound, a preparation combining one ounce of oil of citronella with four ounces of melted vaseline should be rubbed on the face and hands. Persons who object to the odor of citronella could use this: castor oil one ounce, alcohol one ounce, oil of lavender one ounce. Both preparations were used by workers in the Panama canal zone and gave great relief until the extermination of mosquitoes was undertaken. Neither preparation should be allowed to get into the eyes.

**Miles of Wire in This Apparatus.**

A million-volt transformer of 1,000 KVA capacity is being built by a leading electric company for its experimental laboratory at Trafford City, Pa. The windings of this transformer contain nearly 70 miles of wire. The terminal bushing is the largest ever built in the Westinghouse shops. Special machines had to be fitted to turn the bushing on this account. Its length is 19 feet, and it is 41 1/2 inches in diameter. The static shield will be 10 feet in diameter and 20 inches deep. The bushing will weigh about 9,000 pounds when completed.

**We Have Your Copy Of An Interesting Book On Internal Baths. It Is Free**

Dr. Chas. A. Tyrrell always claimed his life was saved by Internal Bathing. And that after it made him well, it kept him 100% well and efficient for many years. This is not hard to believe when Physicians agree that most human ills are caused by accumulated waste in the lower intestine and no medicine has ever been found to keep it free from these poisons. Dr. Tyrrell's book tells why and how this has been the means of freeing over a million of enlightened Americans, many right here in town, from "that tired feeling" as well as the more serious illnesses which follow if the pernicious poisons are not cleansed out. Pure warm water scientifically administered, will take these poisons out and keep them out.

Ask today for this book—"Why Man of Today is Only 50% Efficient"—Remember it is free to you.

**WILLIAMS DRUG STORE, Independence, Ore.**

**RECLAIMED LAND FOR HOMESTEAD ENTRY**

The secretary of the interior announces the opening to homestead entry of 9,681 acres of public land Oregon-California. The land is divided into 174 farm units and will be opened on October 27, 1922, by a drawing at 2 o'clock p. m. Under provisions of an act of congress ninety days' preference right is granted to ex-service men of the war with Germany, after which any lands remaining unentered will be open to filing by persons qualified to make homestead entry in the United States.

In connection with the work of the Reclamation Service in reclaiming the arid lands embraced in the Klamath Project in southern Oregon and north-California, one of the most interesting engineering features is the drainage of some 505,000 acres of land in the bed of Tule Lake, which will be divided into farm units and irrigated from the Government system. The chief source of water supply for Tule Lake came from Lost River. By means of a diversion dam in this stream the waters have been turned through a canal into Klamath River, and Tule Lake has been slowly but surely drying up. The lands to be opened comprise the area uncovered by this process.

The farm units included in the opening have an irrigable area varying from 13 to 80 acres each, the average size being 55 acres. The lands are comparatively smooth, free from brush, trees, and stones, and the soil is of sedimentary character composed of sand and silt.

The elevation is about 4,000 feet above level, the temperature varying from 15 degrees below to 100 degrees above zero. The winters are long and the growing season rather short. The principal crops are hay and grain, and potatoes have been grown suc-

cessfully on the lake lands; also gardens of the hardier vegetables. On account of danger from frosts the locality is not adapted to fruit growing. In fact this is essentially a livestock country.

Most of the land can be put in good condition for irrigation for around \$10 per acre. It is likely to cost from \$15 to \$30 an acre more to secure a good stand of alfalfa. The nearest railroad is at Klamath Falls, 30 miles from the land, but the state highway runs from Klamath Falls to Malin.

The cost of water right is \$90 per irrigable acre, but the terms of payment are very easy. At the time of making water-right application a deposit of 5 per cent of the cost of water right, or \$4.50 per irrigable acre is required. No further payment is due for five years, after which the balance is paid in installments extending over a period of 15 years, without interest. There is an annual operation and maintenance charge as on all irrigation projects.

The drawing for these lands will be held in the office of the project manager, U. S. Reclamation Service, Klamath Falls, Oregon, to whom applicants should write for further information.

**PORTLAND TAX AMENDMENT TO GO ON THE BALLOT**

Portland—The constitutional amendment allowing Portland to tax itself \$3,000,000 over a period of three years will not be effected in any way by the decision of the exposition committee last Friday to postpone the 1925 exposition to 1927.

The enabling measure, which must be voted on by voters of the state, provides for holding of an exposition in 1925 "or as soon thereafter as possible." The state measure merely authorizes Portland to tax itself for

the exposition, the managing committee points out. No tax is provided outside of Portland.

Decision to postpone the exposition was unanimous after careful consideration and debate. Committeemen felt that more time was necessary in which to raise the \$1,000,000 by private subscription and prepare grounds and buildings.

In the city of Portland the measure on the ballot will provide for a tax of \$3,000,000 to be raised on a basis of \$1,000,000 each year for three years, the first levy to be made after private subscribers have raised a fund of \$1,000,000 as a stock subscription.

An intensive Oregon advertising campaign will be started after the election, if the amendment is passed, the managing committee decided. The attractions and opportunities of every section of Oregon will be heralded to the world in a campaign which will continue until 1927.

**Drafts Cause Disease**

Watch the ventilators and sky lights in the poultry house and keep them closed to avoid drafts which result in roup, leg weakness, and colds. If the birds are affected with colds, tincture of iodine injected into the nostrils by means of a machine oil can, after squeezing out the mucus, will prevent the cold from developing into canker or roup.

**Feed Mash for Layers**

See that the pullets consume as much mash as possible as this is what will make them lay. The tendency is to eat too much scratch feed which causes them to stop laying. They should have all the green feed they will take, plenty of fresh buttermilk, and as much mash as scratch grain.
