Dr. Darrin Talks on Deafness.

It is from the throat that the citadel of the hearing is taken.

The mucous membrane lining of the throat lines also the passages to the ears—the Eustachian tubes.

When disease sets up in the throat it is likely to extend into the Eustachian tubes.

The same conditions that cause swelling or inflammation, or the secretion of thick and heavy mucus in the throat cause the same effect in the ear tubes.

Pharyngitis, Laryngitis, Rhinitis, Tonsillitis, Bronchitis and all the many diseases affecting the membrane of the throat may result in deafness or discharging ears.

Scarlet fever, Diphtheria, Typhoid fever produce inflammation of the throat, which often extends to the ear tubes and causes Deafness.

It is necessary to use an entirely different treatment; one that will reach the seat of the inflammation in the ear tubes themselves and that can be done by electricity.

Head noises either indicate a condition of impaired hearing or that the hearing is going to fail.

Whenever the treatment has gained an influence over head noises, it is a certain sign that restoration of hearing will soon take place.

Nearly every case of deafness caused by disease in the Eustachian tubes can be cured by the proper use of electricity and medicines if skillfully applied.
