DENTISTRY today is progressing beyond all expectations. It is possible to do dental work without much pain. We believe that a farmer who would be guilty of plowing with a crooked stick, as they once did, would be prosecuted; so, in the same way, we must adapt ourselves to modern methods. With this mind, let us have your ear just a moment. We have had your county seat permanently, and to be able to do this we be up to the times, both in methods and appliances. In fact you will find everything known to the dental profession to pain and make you comfortable. Our power and heat electricity. Electrical Dental Engine gives a steady, even Electrical Sterilizer—before each use of the instruments are sterilized; Electric Fan keeps you cool by a constant blast of air; Electric Hot Air Syringe gives a warm blast of air to the teeth, relieving the shock which cold air produces. Compressed air feeds the atomizer which is filled with antiseptic and used after each and every operation, taking away every trace of blood poisoning. Imperial Columbia Chair can be changed to suit the little ones. Fountain cuspidor through passes a stream of water, leaving a clean appearance and satisfactory condition. Saliva Ejector takes care of spit as it accumulates, relieving the patient of all discomfort caused especially when rubber dam is applied. By this method of treatment and save abscessed teeth, old roots, make them good as by our crown work. Gold fillings are placed in your hand pressure, doing away with all soreness and the ache having it hammered in.
