ASHORE IN A GALE.
Albion Breaks Her Anchor Chains.
Florence West, Jan. 15: (On Thursday morning last the tug Roberts took the schooner Albion in tow at Cushman's mill at Acme and started out with her, but as the bar was too rough to venture out, the Albion anchored about three quarters of a mile above the government wharf.)

The wind was blowing at a terrific rate Saturday. The schooner Albion, Captain Olsen, laden with lumber, was at anchor, waiting until the bar should be calm enough to permit her crossing out. She had two anchors down, the kind ordinarily used on schooners. About 7 o'clock Saturday evening the starboard chain broke and not a minute after the port chain gave way. Where she was lying the current was running eight miles an hour and the tide ebbing. After the port chain gave way the jib was hoisted and Captain Olsen endeavored to run the vessel into the cove on the weather side of the government wharf, but owing to the darkness and velocity of the wind this was impossible.

The schooner went swiftly down the river and struck the corner of the government wharf, knocking off a fender pile and then, after rubbing along the dock, passed it, veered around and ran ashore, bow straight on.

"DON'T GIVE UP THE SHIP."
When she struck the captain gave the order to lower the boat, but discovered that the schooner was fast and so stayed with the ship. In less than fifteen minutes, the jib blew all to pieces and the foresail was immediately set to keep the vessel aground. She was then about two hundred feet from shore.

At flood tide, which was about 10:30 o'clock, the crew succeeded in getting lines around the trestle work of the jetty which were fastened to each windlass end, all slack taken in, and the schooner was out of danger. The foresail was then lowered.

THE NEWS BROUGHT HERE.
At three o'clock a. m. Sunday, the mate left the vessel and started for Florence. The distance is a little less than four miles but the mate thought it was ten. It was nearly 7 o'clock when he reached this city, and the officers of the tug Roberts were at once notified of the disaster. Steam was raised as soon as possible and the tug left for the scene.

The water began to pour into the hold of the schooner at 8 o'clock and continued for an hour and a half without cessation. The pumps were put to work but were stopped, as the labor was useless. The Roberts arrived at 9 o'clock and endeavored to tug the vessel off, but without success, as the craft was heavily laden with lumber, having a deck load of 65,000 feet and 35,000 in the hold.

Captain Olsen boarded the Roberts and came to this city and made a contract with Mr. I. B. Cushman, of the Sluslaw River Lumber Company, to unload a portion of the lumber. The tug steamed up to Acme, where a gang of nine men and a scow were procured. On her return here another scow was taken in tow and she again proceeded down the river. On arrival at the government wharf the men were put to work transferring the deckload of lumber from the schooner to the two scows. This was between five and six o'clock Sunday afternoon. The tug returned here but went down early Monday morning and brought the men up for breakfast. The work of unloading was then nearly completed. After the inner man was satisfied the gang were taken down again and the work was finished.

The pumps were again manned and this time more successfully, all the water being pumped out. The vessel was then afloat and was taken in tow by the tug and brought up to Acme, where she now lies. The lumber was also taken to that place. On examination the schooner was found to be less badly damaged than was at first supposed, the only injury being some open seams on the bow, caused by striking the government wharf. These will be calked and the Albion will be re-loaded with lumber for the port of San Francisco.

FINAL SETTLEMENT.
Estate of T. J. Smith, deceased: Notice is hereby given, that George B. Dorris, executor of said estate, has filed his account for final settlement of said estate, and Monday the 4th day of March 1895, has been set by order of the court for hearing of objections to the same.
Geo. B. Dorris, Executor.

When Baby was sick, we gave her Castoria.
When she was a Child, she cried for Castoria.
When she became Miss, she clung to Castoria.
When she had Children, she gave them Castoria.

Wood's Phosphorine, the great English Remedy. At YERINGTON'S.

Commissioners Court.
At this time the court considered and allowed the following bills and the clerk was ordered to draw warrants on the general fund in payment thereof, to-wit:
J. K. Marlay, rebate on taxes, certificate No 88, 1894. 13 75
E. D. McKenny, city poor, medical attendance. 12 00
J. M. Parker, supervisor road dist No 12; continued for explanation.
John Bamford, supervisor road dist No 45; continued for explanation.
I. L. McDaniel, supervisor road dist No 7; continued for explanation.
At this time the following supervisors were appointed to serve for the year 1895:

- District No 4—Joe Huddleston
- " 7—Peter Baler
- " 8—Geo Cummings
- " 9—J F Smith
- " 10—A K McKinzie

RUSSIAN ARMY ODDITIES.
Queer Features of the Military Service of the Czar.
The Russian army is full of strange features. Thus the biggest fellows are detailed for duty in the bodyguard regiment—Probrashenski—founded by Peter the Great and originally composed of that monarch's personal friends, all giants in their way. The czar's family take great pride in this regiment, and on the named day of its patron saint attend the festivities in a body, usually re-enforced by foreign ambassadors and ministers. Then there is the Ismailowki regiment, where only blonds are tolerated, and the well known Lawlow guards, all of whom must have turned up noses.

The regulations of the guard chasseurs, on the other hand, admit only dark haired men. The guard officers, being privileged by birth as well as rank in their chosen professions, treat their colleagues in the line almost as badly as the latter treat their subalterns. Up to a few years ago the distinction between them was such that a guard lieutenant had precedence over the captain of the line. The late czar's father changed this state of things somewhat, but not much. A major of the guards would even today rank higher than a line colonel, if there were such a person. But the advancement of the regular army officer seldom surpasses the rank of battalion chief. Men having attained that distinction are generally made "commanders" of a small precinct, while disgraced guard officers or general staff officers obtain the colonelship or lieutenant colonelship of the regiment to which they have devoted their lives.

Only very rarely does a line officer succeed in obtaining a commission in the war academy and eventually in the general staff. It should be mentioned, however, that the majority are unfitted for such advancement. The requirements of the officer's examination in the line are considerably less stringent than those upon which the admission to the guards' officer corps are based. The applicant's social standing is not at all considered, and to complete the wretchedness of the line officer his pay is ridiculously small and inadequate, especially that of the infantry officer, the lieutenant receiving not more than \$300 per year all told. The captain has a little over \$500, the major \$450. The most abject poverty prevails among them, and only a few of the younger officers own more than one uniform, which must do service both on and off parade. The infantry private of the line receives in money 15 shillings per year, including the czar's and others' presents.—Pittsburg Dispatch.

WHAT THE MINE BOSS KNOWS.
Nowadays a Colliery Manager Must Have a Smattering of the Sciences.
The subjects, in addition to the three R's, which intending colliery managers should endeavor to get a thorough knowledge of, are as follows: 1. Geology, which gives them a knowledge of the rocks forming the earth and the formations in which coal is found; also of the faults, dikes, washouts, etc., which interrupt the continuation of coal seams. 2. Boring and sinking, a knowledge of which is required in the location of shafts and in searching for coal seams that have been disclosed by faults, etc. 3. The practical working of mines, which enables them to lay out a mine on the most advantageous systems of working, hauling and drainage. 4. Principles of mechanics, which enables them to know the strength of beams, girders, ropes and chains required for different kinds of work; also the horsepower of engines required for winding, hauling and pumping certain quantities of water. 5. Steam, compressed air and electricity; the properties of steam and the principles of the steam engine enable them to use steam economically and to the best advantage and to superintend the erection of engines and to be a help to them in purchasing new engines; compressed air, which enables them to know the advantage of it over steam for driving, drilling and coal cutting machines; electricity, so that they may know something of the advantages of electric signaling and lighting and of the transmission of power for long distances. 6. Mine ventilations, gases, coal dust, lighting of mines and explosives and blasting; a thorough knowledge of these, if properly carried out, insures the safe working of a mine and will considerably reduce the causes of explosions. 7. Surveying, because the manager is responsible for the plans to be produced to the inspector and for his workings trespassing into other royalties and for leaving sufficient coal under surface erections, etc. 8. The coal mines regulation act, which should be well understood to comply with the act in all its details for safety. 9. And last, but not least, he must study hard to be able to deal properly with any manager man of all shades of opinion.—"Science and Art in Training."

The Typewriter Envelope.
The introduction of a typewriter envelope as a universal boon to careful typewriters proves how extensively commercial correspondence is carried out by means of the ingenious typewriting machine, and how manufacturers of the day are constantly on the alert to meet every need in all that concerns art and industry. The peculiarity of these novel square envelopes is to offer a splendidly even surface and regular thickness of paper just in the space where the address has to be written. In this wise, whatever typewriter is employed, and no matter "shaded" or "unshaded" is avoided and perfect alignment secured. It is worth noting, too, as a sign of the advance of modern civilization, that the very first parcel of the new invention dispatched from England was for Balkiavik, which boasts of the only typewriter in the whole of Iceland.—Philadelphia Press.

He "Tipped" Him the Gloves.
It is related of the famous Jonas Hanway that, on being politely reproached by a nobleman for not coming oftener to dine with him, he replied:
"Indeed, my lord, I cannot afford it."
On another occasion he was paying the string of servants, who, as usual, appeared on the scene as he was leaving the house he had visited.
"Sir, your groutcoat," said one, upon which he paid a shilling.
"Your umbrella, sir," said a second, another shilling.
"Sir, your hat," another shilling.
"Your gloves, sir."
"Why, friend," said Hanway, "you may keep the gloves. They are not worth a shilling."—London Tit-Bits.

An Observing Boy.
Boy—Half a pound of steak, but let it be very tough.
Butcher—Tough? What's that for, my lad?
Boy—'Cause if it's tender daddy'll eat it all himself.—Pick Me Up.

JAY GOULD'S ESTATE.
The Report of the Appraiser Makes It Over \$80,000,000.
Extra \$6,000,000 for ties would.

NEW YORK, Jan. 21.—Today the exact value of Jay Gould's estate was disclosed when the report of appraiser David McClure was filed with the Surrogate. It amounts to \$80,934,508.79. A tax will probably be imposed upon this amount. To determine the value the appraiser took the market values at the time of the death of Mr. Gould. A claim of \$6,000,000 is found to be due from the Jay Gould estate to George J. Gould for services for 12 years at \$500,000 a year. A codicil in the will states that this was to be his remuneration for acting as his father's sole representative in the transactions, which were all of great magnitude in selling particular properties of millions in value. He had practically the sole control and management of his father's large estate during the final years of the latter's life, and had alone access to the safe deposit vaults which contained millions of dollars worth of securities.

A Happy Husband.
DELEWARE, Ohio.—After four months use of Simmons Liver Regulator my wife is almost entirely relieved of chronic constipation and bleeding piles.—W. B. Leeper. Your druggist sells it in powder or liquid. The powder is to be taken dry or made into a tea.

DIED.—Junction City Times: In Los Gatos, California, Monday, January 14, 1895, Georgiana Hamilton, daughter of John and Anna Hamilton, aged 17 years, 5 months and 4 days. She formerly resided in this city and is quite well known. She was taken sick during October and grew a great deal better but took a fatal relapse. The funeral took place at 3 p. m. Tuesday in the Los Gatos cemetery.

The newest fad is an "identification party." Slips are passed around and each one writes a predominating characteristic of some one present, and the rest are required to name the person. The people have been so engrossed all their lives in studying themselves that bad guesses predominate.
The "Ideal" oil stove fills a long felt want at a small expense to run it. See them.
