

Be Careful

About the little things and the big things will take care of themselves is a well-known saying. Did you ever stop to think how true this is? The purchasing of clothing is a very little matter, but too much care cannot be given it, especially if you are desirous of obtaining the highest measure of satisfaction from same.

We are now showing our new fall clothing, made up with all the new ideas of style and up-to-date high grade tailoring, at prices that sell the goods when you see them.

Suits

RESEEDING THE FOREST RANGE WITH CULTIVATED GRASSES

STUDIES AND EXPERIMENTS TO
INCREASE THE FORAGE ON
THE ALL-IMPORTANT SUMMER
RANGE IN NATIONAL FORESTS

C. R. Seitz, supervisor of the Umpqua and Tillamook forest reserves, hands the following bulletin issued by the forest service of the United States Department of Agriculture:

The livestock industry turns to account one of the greatest natural resources of the West—the forage crop. From the plains to the Pacific an astonishingly large proportion of the area is grazing land. It is estimated that this region contains over 400,000,000 acres which are useful at present only for pasturing stock. A map printed in colors to bring out the main areas of grazing, agricultural and desert lands was published not long ago. It showed the grazing land color spread like a sheet over nearly all this vast domain, which comprises something like one-third of the entire United States, with relatively minor patches of the other colors. In arid regions the range is comparatively poor, but almost everywhere enough forage plants can grow to make grazing profitable.

The forest service, in co-operation with the bureau of plant industry, has begun a series of experiments to find out how the carrying power of grazing lands within the national forest reserves can be increased. In a nutshell, the problems are, first, how to grow, and second, how to utilize, the largest amount of forage. The conclusions reached are likely to have an important bearing upon improved use of the open range generally. The economic possibilities of these experiments are enormous.

In the past the stockman on the public ranges has simply taken what nature offered him. But grazing tends to put nature at a disadvantage. Plants which propagate by seed, for example, have no chance when the seed stalks are being eaten off all the time. In many grazing regions the carrying power of the range has been very greatly reduced through the present methods of use. Within national forests the restriction of the number of stock to the capacity of the range has already checked the worst evils that result from over grazing. But the new investigations promise greater things.

These investigations are to be carried out along three distinct lines—studies of what can be done in the way of introducing cultivated grasses, studies of range improvement, through better knowledge of how wild grasses propagate, and studies of how to handle both cattle and sheep so as to reduce the waste due to herding and trampling. The present account deals with the first, the introduction of cultivated grasses.

The man in charge of these studies is Frederick V. Coville, who is an expert in matters connected with the use of the range. Mr. Coville made a careful study of grazing problems in the Cascade mountains of Oregon for the interior department ten years ago, and contributed to the discussion of the grazing question which formed part of the public lands commission report made in 1905.

The experiments will begin in Walla-walla county, in Northeastern Oregon, in the Imnaha national forest. There at different altitudes a number of moist natural meadows have been picked out. Those having the greatest altitude are 10,000 feet or more above the sea, where in early July the snow still covers the ground, although rapidly melting under the summer sun. The lowest meadows are about 5000 feet above sea level.

The purpose of these wet meadow experiments is improvement of the summer range. Stock do not winter in the mountains, but are gradually driven higher and higher as the advancing season calls forth the vegetation on which they feed. The winter ranges on the plains, supplemented largely by hay, alfalfa and other feed crops which the ranches produce depend for their utilization upon this summer pasture, to which the stock can be driven when the dry season sets in. It means can be found to improve the summer range the benefit will be felt from Canada to Arizona and New Mexico, so that the experiments are of broad importance.

The meadows selected for sowing will first be grazed as short as sheep can crop the native grass. Since the ground is wet, it will be much cut up by the sheep. Clover, timothy, red-top or bluegrass seed will then be sown broadcast, and the sheep will be driven to and fro across it until the seed will lie dormant until next summer's sun melts the snow and warms the ground. Whether it will grow and mature a crop remains to be seen. If it will, one problem of mountain pasturage will have been solved, for a much larger quantity of forage will be furnished by these plants than the native growths supply.

If this grass sowing on the high Oregon mountains is successful, it will show the way for similar development elsewhere. There is hardly a limit to the possibilities presented.

SEEDS AND FARM LAND
We can sell you better land for less money than you can buy any place in Lane county. Don't fail to write us before buying.

CUTLOOK FOR HOPS GLOOMY AT PRESENT

The hop situation in Europe is entirely different from that on the coast, and, of course, it is good news to the growers there to hear of a decreased crop on the Pacific coast. The latest foreign reports say that the German and Bohemian crops will be large, while the English crop will be of fine quality, though slightly below the average in quantity. The Oregon crop is rather an unknown quantity, as mold has appeared in many sections, and reports as to its extent are conflicting and unreliable, though undoubtedly the damage will be great. Another factor that enters into and complicates the situation is the probability that many of the yards will be left unpicked. One hop dealer estimated the total yield of Oregon this year, under average conditions, at 180,000 bales, but estimates the yield now at 100,000 bales. Others, well informed, too, place the yield still lower, one putting the figure at not to exceed 75,000 bales. The Washington crop is in much the same condition as that of Oregon, and will not run above 40,000 bales, according to recent estimates. In the meanwhile, prices—or rather the lack of them, gives the hop outlook anything but a roseate hue.

Kola Nels yesterday afternoon purchased 47 bales of selected hops of last year's growth from B. Cady's lot, in Benton county. The price paid was 5 cents, which is considered remarkably good at this time, when the market is in such a depressed condition, owing to the poor outlook for this year's crop, where growers in a majority of cases are only receiving 7 cents on contracts for 1907 hops. Mr. Nels also purchased a lot of selected hops of last year's growth from Moyer & Milligan, paying 4 1/2 cents.—Salem Journal.

BACK FROM TRIP TO BELKNAP SPRINGS

L. E. Runyan and wife, Attorney C. K. Adams, Will H. See and wife and Miss Sult, of Portland, who have been at Belknap Springs for the past four weeks, having made the trip up from Portland in two automobiles, arrived in Eugene last evening on their return trip and went on to Corvallis, intending to start from that city early this morning for home. These autos were the first to make the trip up the McKenzie as far as the inner river resorts. The road that far up is good for autoing most of the way, although in some places it is rather rocky. Coming down from Montomery's place yesterday the party encountered much mud, a heavy rain having fallen in that vicinity the night before.

GOOD INVESTMENTS IN EUGENE PROPERTY

Vacant lot, 160x180, NW corner West Fifth and Olive street, only half block from Willamette street. Price, \$8000. Short time only.

Notice for Publication.
United States Land Office,
Roseburg, Or., July 26, 1907
Notice is hereby given that in compliance with the provisions of the act of congress of June 3, 1878, entitled "An act for the sale of timber lands in the States of California, Oregon, Nevada and Washington territory," as extended to all public land states by act of August 4, 1892, Adela M. Pierce, of Walton county of Lane state of Oregon, filed in this office on March 1, 1907, her sworn statement No. 8423 for the purchase of the NW 1/4 of NE 1/4 of Section No. 24, in Township No. 18, south, range No. 9 west, W. M., and will offer proof to show that the land sought is more valuable for its timber or stone than for agricultural purposes, and to establish her claim to said land before W. W. Calkins, U. S. Commissioner, at his office in Eugene, Oregon, on Wednesday, the 30th day of October, 1907.

She names as witnesses: Jarvis Sutherland, of Walton, Oregon; William S. Sutherland, of Walton, Oregon; William T. Ball, of Walton, Oregon; W. H. Pierce, of Walton, Oregon.

Any and all persons claiming adversely the above described lands are requested to file their claims in this office on or before said 30th day of October, 1907.

Just a word to those who wish to invest in Land

IN the first place, we ask the question why people buy cheap land when, from every point of view, good land is much more profitable? For instance, poor land which cannot be worked at a profit. You can't pay for it in a hundred years. But on the other hand, if you buy good land that you can work at a profit, it will eventually pay for itself, whatever the price may be; and again, good land is much easier worked.

If you want to raise stock, good land is the cheapest. If you want to raise grain, good land is the cheapest. If you want to raise fruit or vegetables, good land is the cheapest. Why? Because it takes no more to plow it; because it takes no more to harvest it. So it is clear to see that if it pays to work poor land, it surely pays to work good land.

So when you buy, buy good land, and then if you should want to sell it, you have no trouble in disposing of it.

So if you want good land at the right price, come and see us.

We have made arrangements to sub-divide some of the best large tracts in the country, to suit those who may wish to purchase their land. It is of the best grade, suitable to grow anything that grows in the West. Our prices are right, our land is A1 and location good.

SMALL TRACTS—CLOSE IN

Have four, acre and a half, tracts adjoining city limits, lies nicely, good soil, just what you want for a home or investment. One of these tracts costs no more than an average city lot. You can make your own terms, small payment down, monthly installments if you wish.

FOR SALE

A-1 farm 4 miles from Eugene on main graveled road, all in cultivation and all purpose place; will sell cheap for cash or trade for city property. If you are looking for a snap come and see it.

FOR SALE

600 acres; well-improved farm, close to market; 300 acres in cultivation; living water; 30 acres timber; on good county road. Price, \$26 per acre.

FOR SALE

Choice river bottom land; in tracts to suit purchaser; well worth your time to see this. Price from \$55 to \$100 per acre.

FOR SALE

73 acres close to town; house and barn; small orchard; 1 1/2 miles from State University; nice, rolling land; a bargain at \$4,000.

FOR SALE

House and two lots; good location; on right side of street; modern house; will trade for land with proper location.

FOR SALE

Choice vacant lots along ear line. Prices to suit purchasers.

If you want timber and timber lands, we have some in large or small tracts. We make timber lands a specialty.

All correspondence promptly answered.

If you want choice river bottom land, don't forget to see us.

If you want to buy real estate, call on or write us.
