From various sources reports have been received that jackrabbits of the kind common in Eastern Oregon are numerous this fall in the Willamette valley. As the Eastern Oregon rabbits have never been numerous enough in the valley to cause any fear of injury to crops it has been as-

sumed that they would not thrive here, but the unusually large number that has been seen lately gives rise to the belief that they may prove to be a pest. The Eastern Oregon rabbit is larger than the species common in the valley.
