How many dollars worth will we sell opening day?

It's Going Over Big — So Be On Hand — Stanley's Opening

If we don't have the largest throngs of buyers that Eugene has ever witnessed I'm knocked clear "Cuckoo." We have based our prices on volume. We must turn merchandise to make these prices. You do your part and we'll do our part. Give us co-operation. We are working for you.

Ball Owens Process, "Perfect Mason"
And "Ideal"

Fruit Jars—The selection of the right jar for canning and preserving is of prime importance. Too often the quality of the jar has been taken for granted—just as too little attention has been given to the Rubbers and Caps.

Success in canning is a question of small details, and a perfect jar is as essential to good results as the selection of ingredients and the method of procedure. Ball Jars are the scientific development of many years devoted to experimenting and practice. The vast resources of the Ball institution have been constantly devoted to the perfecting of the jars that bear its name.

Ball Jars Are the Only Fruit Jars Made by the Owens Process—The "Owens Process" consists in drawing into the forming molds by suction the exact quantity of glass necessary to make the jar, this glass being evenly distributed on all sides; then blowing into shape, forming one homogenous structure. In the old process the neck as well as the sealing shoulder is pressed, while the body of the jar is blown. This makes two natures of glass which is difficult to anneal, and often results in the jars twisting off at the neck when screwing on the caps.

The Owens Process makes possible an absolutely smooth and perfect shoulders for the Rubber Ring, insuring a positive air-tight seal.

The inside finish of the jar is perfectly smooth, has no sharp offsets to catch any particles of food while being emptied, making it easier to wash, therefore more sanitary.

Ball Owens Process Jars may be readily identified by the even distribution of glass, the smoothness of the finish around the neck, the freedom from blisters, clearness of glass and the strong, double shoulder which was originated by the Ball Process.

If grocery prices in Eugene have been reduced give Stanley's the credit.

If you wish us to keep the prices down give Stanley's the business.

It takes a lot of business to be able to sell at prices like these. Just give us the business and we will do the rest —always sell at the lowest possible prices.
