

BOYS AND GIRLS FROM LAKE WILL BE AT MEETING

OREGON AGRICULTURAL COLLEGE, June 13.—The twelfth annual boys' and girls' summer school will be held at the Oregon Agricultural college, June 15 to 27, inclusive. All club members of Oregon in good standing are eligible to enroll. Many members are expected to attend from Lane county. Five hundred club members and 200 local leaders from every county in the state will be there.

The expenses are the necessary railroad fare and \$15 for room and board. Quarters will be in college dormitories, the girls in Waldo hall and the boys in Cautron hall, with meals served in Waldo. Club members will furnish their own bedding.

"Busy at all times" is the motto of the club department. Class work will start at 8:30 and last until noon. One and one-half hours are allowed for lunch, and at 1:30 all report for assembly. After assembly the "clubbers" are free to spend the afternoon at recreation of some sort provided by those in charge. Stunt shows, movies, and parties are examples of the evening entertainments.

Club classes will be conducted by outstanding specialists of the college. Crop production, stock judging, blacksmithing, horticulture, farm mechanics, poultry, beekeeping, and bacteriology will be taught the boys in such a way that they will understand. The girls' program has been increased also. Baking, canning, cooking, house decoration, table service, and other home economic projects will be taught.

Assembly speakers will be such men as Governor Walter M. Pierce, J. A. Churchill, state superintendent of public instruction; W. J. Kerr, president of the college; Paul V. Maria, director of the state extension service; and Miss Gertrude Warren of the United States department of agriculture.

VETERAN DEAN AT O. A. C. HONORED

In recognition of 30 years of service to Oregon agriculture on the staff of the state college, Dean A. B. Cordley of the school of agriculture was honored with words of praise and affectionate appreciation by more than 100 of his staff, associates, and friends at a banquet in the new Henton hotel Thursday night in celebration of his initiation into Alpha Zeta, national agriculture fraternity. Dean Cordley is the first man to be elected to Alpha Zeta as an honorary member from Oregon and one of the few ever selected in the United States.

"The work that Dean Cordley has done alone for the agricultural interests of Oregon is worth more than the entire cost of Oregon agricultural college since its inception," declared W. K. Newell of Eugene, former state food and dairy commissioner. He cited the work of Dean Cordley in discovering lime sulfur spray, said to have saved millions of dollars in Oregon alone.

A beautiful silver service was presented to the dean by his staff in agriculture at the close of the banquet. Telegrams from former students and associates from all over the country were read, expressing the widespread appreciation of the lasting results of his long service as teacher, scientist, and leader in scientific and practical agriculture.

Ten years after entering the course in agriculture at Michigan agricultural college in 1885, Dean Cordley came to O. A. C. where for 30 years he has been a leader in scientific work and the development of the strong school of agriculture at the college, now recognized throughout the country for the high quality of its courses and of its graduates. He holds the degree of doctor of science from his alma mater in recognition of his services to agriculture and the nationally known value of his scientific contributions, particularly the development of lime-sulfur sprays, and control of anthracnose and codling moth in the northwest.

BRICK PRICES WILL BE STABLE, REPORT

A 20 per cent increase in quantity of brick moved is announced by the Common Brick Manufacturers' association of America in the monthly report of that body, a copy of which has just been received here. The price was declared to be stable.

"There are reports as of the first of May advance orders equivalent to about 45 days' production of the reporting plants, which is not a bad situation," said the report. "The increase in business, however, is not evenly distributed over the country. California shows the largest per cent of increase in new business and future orders. The Illinois-Indiana and Wisconsin district, of which Chicago is the principal center of production, also shows a considerable increase, both in the movement of the product and orders on the books. Similar gains are noted in New England, New York, eastern Pennsylvania, New Jersey, Delaware and Maryland. There is a slight falling off in brick business in Ohio and Michigan, two of the most active industrial states.

Proper Nails May Aid Plaster Board

The use of the right sort of nails when putting up a plaster board wall is of the highest importance. This will become apparent to anyone when an improperly nailed wall or ceiling made of this material starts to fall. It has been the cause of much popularity regarding plaster board, but the real trouble is not with the material but with the way it is put up.

The breaking of side walls is due to improper backing. I use a nail about 1 1/2 inches long, with a flat head 3/8 inch in diameter. Between studs placed

Poultrymen Lose Millions in Chicks

COLUMBUS, O., June 11.—Lies that live on baby chicks cost the poultry industry of the United States more than \$15,000,000 annually, according to the Ohio State University college of agriculture.

To reduce this loss, F. C. Bishop, federal entomologist, is now at the university laboratories to study the effect of this pest on egg production and to attempt a cure.

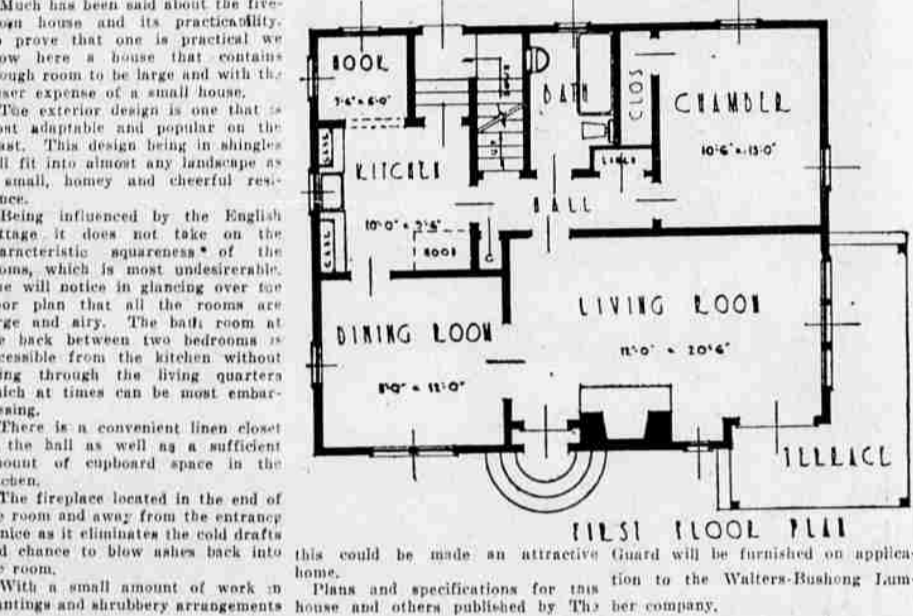

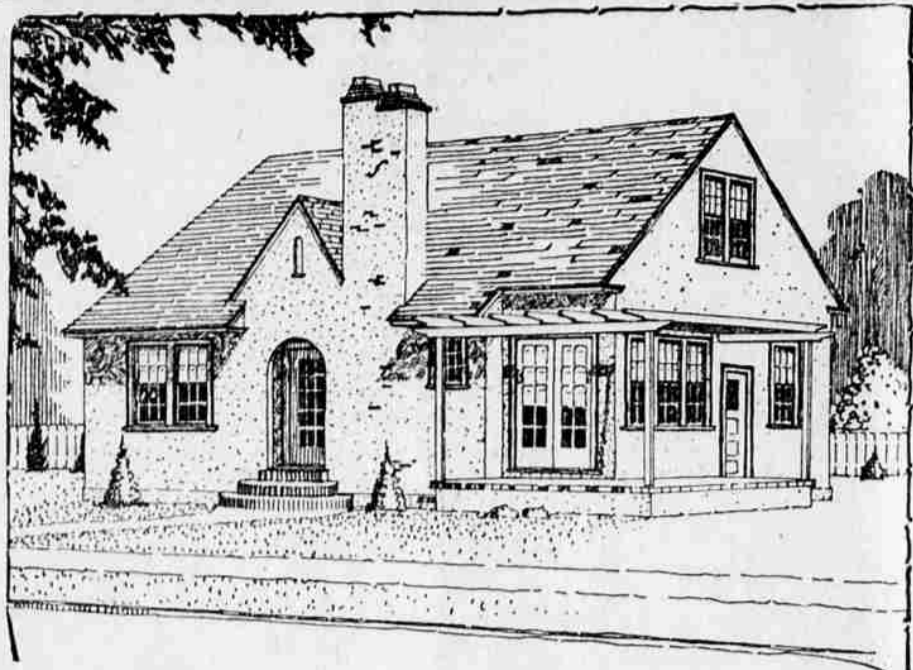

Bishop's work with the U. S. Bureau of Entomology includes not only food insects, but pests that affect the health of animals. In Ohio, however, he will devote his entire time to the study of fowl insects.

Bishop is known best as the man who developed sodium fluoride as a treatment to control poultry lice.

Employees Assigned To Military Camp

"The Paraffine Companies, Inc. is the first California industrial concern to assign three of its employees to the Army's Citizens Military Training camps this year, and this company, I am proud to say, has always been to the forefront in rendering a patriotic service to the government."

This was the tribute paid the Paraffine Companies, Inc., manufacturers of paints, roofing and floor covering, by Colonel E. V. Smith, chief of staff, Ninety-first division, and in charge of the Citizens camp which opens at Del Monte on July 21 and ends August 19.

The boys assigned to the camp yesterday by their company are Ted Barton, 21, merchandise department; Lloyd Greenville, 23, Pabolin department; and J. L. Fuller, 22, stationery department. The concern will pay the salaries of the lads during the training period.

Forests cover two-fifths of the total area of Russia.

Riding a girder is not a job for a nervous man. BUT no one is nervous by choice. There is a way that you may so strengthen your body that the nervous system will be cushioned on sound muscles and flesh. But this condition will not come about unless you have rich red-blood-cells. Red-blood-cells are the most important thing in all the world to each of us. More red-blood-cells! That's what you need when your nerves give way and you cannot control yourself.

S.S.S. will prove to you its "Why" and "How" reason. Since 1826 S.S.S. has helped thousands. Because S.S.S. does build blood power, it builds you up when you are run-down, clears the system of blood impurities, routs so-called skin disorders—and stops rheumatism, too.

This is why S.S.S. is accepted as the greatest of all blood purifiers, blood builders and system strengtheners. Start taking S.S.S. today. Its medicinal ingredients are purely vegetable. Your nerves will become stronger, you will have more energy, vitality and vigor and a more up and going appearance.

S.S.S. is sold at all good drug stores in two sizes. The larger size is more economical.

FRUIT MOTH IS ADVANCING WEST

(By NEA Service) URBANA, Ill., June 13.—The oriental fruit moth, alien insect pest, has advanced almost to the Illinois boundary from the Atlantic coast and now threatens that state with invasion.

W. P. Flint, state entomologist, is co-operating with the college of agriculture at the University of Illinois here in efforts to fight this pest, once it enters the state.

According to Flint, the entry of this pest is almost inevitable. To combat it, within, he has asked farmers to send in any worms they find for research. The insect is a small whitish worm with a brown head. It bores into the twigs or fruit of peaches, apricots, plums or quinces.

"The oriental fruit moth," explains Flint, "is one of those foreign invaders which probably came into this country from China or Japan some time before 1915. It is now well established all along the eastern coast of the United States and during the past year has been found in many of the southern and middle western states, including Tennessee, Arkansas and Indiana.

"The moth is a pest of all our common tree fruits. The greatest losses in this country have been from its injury to peaches.

"The insect has two to four broods, depending upon the climate. The first brood works largely in the twigs of peaches and other fruit trees while the second and third broods attack the flesh of the fruit.

"This insect is extremely difficult to poison. In some orchards in the east it has damaged more than 70 per cent of the crop."

CUCUMBER BEETLE

A mixture of powdered lead arsenate and hydrated lime in the proportion of one to ten by weight is an effective dust for controlling the common striped cucumber beetle. The dust can be placed in a gunny-sack and shaken over the plants three or four times daily until vining begins.

SPRAY FRUIT NOW

Apple trees should be sprayed early to control apple worm and other insect pests. Either the standard lime sulphur solution, or the 3-4-50 Bordeaux mixture may be used.

SKIM MILK FOR PIGS

Weaned pigs can be fed no better substitute for their mother's milk than skim milk or buttermilk.

SOYBEANS FOR HAY

Soybeans have been found to make a good hay crop for dairy cattle. The plant is popular in many places because of its heavy yield, amounting to two tons on fairly good land, and its high feeding value.

STOCKS AND BONDS

We solicit inquiries to buy or sell any marketable listed, local or unlisted securities. Active market for Durant, Star, Flint, and Rickenbacker Motor issues. Public Utilities. Prompt attention given all orders. Cash paid for purchases; no delay. Quotations furnished.

She's A Prize-Winner, Not A Flapper

Peggy Keith has won all sorts of honors in farming and stock raising, and has helped to prove that not all the youngsters of today are sheiks or flappers. She's from Virginia.

Farm Facts

THE government expects a smaller early peach crop in 10 southern states this year than was harvested in 1934. The condition of the crop is placed at 69.2 per cent of normal, as against 78.6 per cent last year.

More than 10,000 cattle are under government supervision for bovine tuberculosis. North Carolina already has 30 counties officially recognized as free from this disease.

Early spring lamb conditions are reported good in nearly all areas of the country. This was due to good pasture and favorable April weather.

Shipping shortweight butter recently cost a Colorado dairy company \$2800, a fine imposed by the Pueblo, Col., federal court.

Three-fourths of the losses of sheep and lambs in western ranges are due to improper feeding conditions, says the U. S. department of agriculture. Shepherds have spent thousands of dollars in medicines as cure-alls, when the real preventive for sheep ailments was proper feeding.

A slight decrease in wheat acreage is reported for 21 countries by the International Institute of Agriculture at Rome. The total to date is 127,046,000 acres, against 129,075,000 for the same countries last year.

The department of agriculture

Germany to Test Wisconsin's Corn

MADISON, Wis., June 12.—A group of Wisconsin's Golden Glow corn has been sent to Germany to be planted there for experimental purposes.

Dr. F. Hagedorn, minister of agriculture from Germany, has written to this country, from the University of Hohenheim, near Stuttgart, where it was originated at the Wisconsin College of Agriculture.

This type of corn was planted in a trial in northern Germany last year. Wisconsin lies in about the same latitude.
