ACTION ON BLIGHT IS NOT SUCCESSFUL

Nitrogen fertilizers applied to Lane county walnut trees to combat blight have proven unsuccessful. O. S. Fletcher, county agricultural agent, announced Saturday after completing a check on the action of the fertilizers. "The presence of nitrogen in the fertilizer increased the wood growth

of the trees, but did not affect the blight," Mr. Fletcher said. It is doubtful whether the blight can be successfully combated by the means of fertilizing, Mr. Fletcher said. Other methods will be used to try to bring about a Mill of the pest.
