

STUDEBAKER builds more six-cylinder cars than any other manufacturer because Studebaker builds them better. We can show you 84 definite points of superiority in the Special-Six over Studebaker's nearest competitor.

In times of close competition, merit wins. Today competition in automobiles is keener than it ever was, because people are

buying more carefully than ever. Studebaker increased its sales 29% in 1921, though the industry, as a whole, showed a falling off of nearly 45%. 1922, up to May 1st, shows a gain in Studebaker production of 143% over the same period of 1921.

Studebaker sales records tell their own story. The buying public has declared for Studebaker superiority.

CRAMPS, PAINS AND BACKACHE

St. Louis Woman Relieved by Lydia E. Pinkham's Vegetable Compound

St. Louis, Mo.—"I was bothered with cramps and pains every month and had to go to bed as I could not work. My mother and my whole family always took Lydia E. Pinkham's Vegetable Compound for such troubles and they induced me to try it and it has helped me very much. I don't have cramps any more, and I can do my housework all through the month. I recommend your Vegetable Compound to my friends for female troubles."

Mrs. DELIA SCHOLZ, 1412 Salisbury Street, St. Louis, Mo.

Just think for a moment. Lydia E. Pinkham's Vegetable Compound has been in use for nearly fifty years. It is prepared from medicinal plants, by the utmost pharmaceutical skill, and superior methods. The ingredients thus combined in the Compound correct the conditions which cause such annoying symptoms as had been troubling Mrs. Scholz. The Vegetable Compound exercises a restorative influence of the most desirable character, correcting the trouble in a gentle but efficient manner. This is noted by the disappearance, once after another, of the disagreeable symptoms.

FILBERT CULTURE IS TOPIC

LANE FARMERS AT O. A. C. INSPECTION TO LEARN OF NUTS Must Successful Varieties of Crop and Also For Fertilizers Will Be Pointed Out

Increase of the Oregon filbert industry by seeking better propagation is one point expected to appeal especially to Lane county farmers at the experiment station inspection at O. A. C. Saturday, June 24, as the leading exponent of the filbert is a Lane county man—George Dorris, of Eugene.

The most successful varieties for the crop and also for fertilizers will also be pointed out to the Lane county fruit growers. The station planting is on anything but natural filbert land and the accomplishment under such conditions was greatly encouraged filbert men in the possibility of this crop under favorable conditions to be found in the valley.

The best kinds of wheat to grow on valley lands for winter and spring plantings and also on fairly well drained or even wet lands is another showing that has interested many valley growers. The aim of this work is to take the determined varieties, get good strains of pure seed, and then discard the 40 or more varieties that clutter up the crop and the market and greatly complicate the industry.

A new vetch bred by a United States plant breeder at the college to stand the over-watering that ruins the common vetch has many admirers. Three Benton county farmers are now cooperating with the station in growing field lots of this vetch for seed. One of them, Mr. Wagner, lives near the Benton-Lane line at Monroe, and has 40 acres of splendid looking crops.

Large fields of Grimm alfalfa are proving this to be the very best forage crop possible on sandy loams of the valley. One 25-acre field has just been cut but enough of the crop was left standing to show the Lane men the value of this alfalfa. The annual yield on this and several other like fields here average from 4 1/2 to 5 tons of cured hay per acre—1 1/2 tons more than the average for the state, including the big irrigation fields of eastern Oregon.

These crops stand from 6 to 10 years before being plowed under. Thus in their life time they yield from 20 to 40 tons of the best hay known from a single planting and a financially profitable for the grower but it builds up his soil, opens it up to a great depth for water passages, and adds to Oregon resources the largest quantity of hay much needed by the dairy cow.
