MRS. KNAPP PASSES AWAY

AGED RESIDENT OF HARRISBURG IS CALLED

HARRISBURG, Ore., March 20.—(Special to the Register)—The third death to occur here within a week was that of Mrs. Margaret Knapp, who passed away shortly afternoon Thursday at her home in town. Death resulted from rheumatism at her advanced age of 83 years, having been troubled with it during all the past winter.

Mrs. Knapp was born in Germany, March 28, 1839, and would therefore have been 84 years old had she lived 13 days longer. At the age of 18 she came to America with her parents, the home being taken up at Baltimore, Md., until in 1869 when her marriage occurred to John Albrecht and they resided in Chicago for the next eight years. In 1877 they moved again this time going to North Platte, Nebraska, at which place a daughter, Rosa A. Widener, was born, her death having occurred in this city about three years ago. It was in this place also that Mr. Albrecht's death occurred. She was later married, a second time, to a Mr. Knapp. Mrs. Knapp's residence in North Platte extended to 1915 when she came to Oregon and took up her residence in this city with her deceased daughter, living here until called by death. Mrs. Knapp was a lifelong member of the Lutheran church, having become a member while still living in Germany.

The funeral services were conducted last Saturday forenoon at 10:30 o'clock from the local funeral parlors of Wright and Poole undertaking establishment. Rev. C. T. Cook, of Halsey, and pastor of the Methodist church, delivered the funeral sermon. The remains were laid to rest in the Masonic cemetery.

One granddaughter, Mrs. Florence Martin, of Portland, but formerly of this city, survives.

Well-Timed
Gasoline
Has a "Follow Through"

THERE'S a marked difference in the way gasolines explode. And it's important that you know.

One kind explodes instantaneously—detonates. It depends on a single crash for the power to drive the piston.

Union Non-Detonating Gasoline explodes in a different way. It thrusts the piston by a long, sustained impulse. It has a "follow through"—exerts a steady pressure throughout the entire stroke.

Detonation Less Efficient

A crashing explosion is less efficient than one that's prolonged.

It limits the compression because of the tendency to explode *prematurely*. It causes vibration, which means wear and tear.

The Sustained Explosion

The prolonged explosion of Union Non-Detonating Gasoline provides *progressive*, sustained impulse.

It permits increased compression in your motor, for compression, as all authorities know, is limited by the tendency of fuels to detonate.

Increased Efficiency

Increased efficiency is dependent on compression, the *complete* burning of the fuel and smooth impulses.

Therefore Union Non-Detonating Gasoline gives a new "lift" on the hills, more speed on the straightaway and a smoother, stronger rush in the "pick-up."

And there's less wear and tear because vibration is reduced.

This higher efficiency means economy also.

Union Non-Detonating Gasoline is always *uniform*. It doesn't disintegrate, thus doesn't deteriorate in storage. It has all the power *when* you use it that it has when it leaves the Union plants.

So there are several reasons for Union Non-Detonating Gasoline.
