PHONE WORKS PLANNED

MORE IMPROVEMENTS TO BE INSTALLED HERE

Phenomenal Growth Has Been Experienced in Development in Eugene During Two Years

A phenomenal growth has been experienced in telephone development in Eugene in the past two years. About a year ago it was found necessary to install one additional section of local switchboard with sufficient facilities to care for approximately 500 subscribers. Before this installation it was found necessary to make an emergency installation of 50 subscribers' answering "jacks" in order to care for immediate installations for service. The installation of the additional section was then completed and is now in service, but from all commercial estimates it has been found necessary to install in the near future 300 additional subscribers' multiples and 240 more answering "jacks" to keep pace with the demand for service. This work should be completed within the next seven or eight months and will involve an expenditure of approximately \$4930, according to J. L. Bland, local manager.

"We are also planning during the year 1923 to increase the capacity of the present telegraph carrier system now operating through Eugene between Portland and Oakland, California," said Mr. Bland. "This will involve the installation of one additional carrier unit at a cost of approximately \$3500. This equipment is used for telegraph service over leased wires used by newspapers, brokers, etc."

The toll switchboard will also be increased in size during the early part of 1924 by the addition of four positions similar to those now in service, said the manager. This addition is necessary in order to care for the increase in toll traffic incident to the use of the telephone repeaters installed about a year ago. The additional switchboard equipment will cost about \$6000.

Leaky Gas Connections

Gasoline cannot only drive a car at terrific speed—it can reduce it to a mass of molten metal. A leaky connection—a short circuit or hot engine—the car is enveloped by fire—the gas tank explodes. It will pay you to repair a gas leak at once.

There are other common causes of fire, some of which cannot be easily detected. Even a minor blaze in your car or garage means an outlay of cash for repairs... It is wise to insure your car against such loss.
