## BEN'S BIFOCALS

By Herbert W. Copeland

You've read how Ben Franklin discovered "the juice." That modern folks put to such varied use. Whomsoever he goes the Yankee is proud To tell how "our Ben" drew sparks from the cloud!

And we've a right to be proud of this wizard and sage, The greatest of diplomats of his day and age, He harnessed the lightning, this genius of ours! He commanded respect of Europe's great powers.

But why take your time his greatness to tell When everyone knows all this very well? But some may not know—it seldom is told— He did a great thing for folks growing old:

He made himself glasses for both near and far; Bifocals they're called, you know what they are. He first tried them out and proved their great worth; And now they are used all over the earth.

Of course we've improved—made better ones now, But 'twas "Banhomme Richard" who first showed us how To see near and far as older we grow, The top part for distance, the readers below.

HERBERT W. COPELAND, Principal of Maupin School, also graduate and licensed OPTOMETRIST

treats cases of hypermetropia, presbyopia, myopia, and astigmatism with properly fitted glasses.

See him on Saturdays or evenings, not at any time that will interfere with school duties.

Why strain your eyes to read when relief is so easily obtained?
