How to Really Save On Cost of Painting

FIRST, find out what good paint is, for that is where you start to save on paint. We spend more to make paint for your economy as follows:

We use only the best materials in Fuller's Specification House Paints—PIONEER WHITE LEAD, pure linseed oil, zinc and finest colors.

We super-purify the lead in a special purifier. Then we make the lead so fine that it will pass through a silk screen with 40,000 meshes to the square inch.

The "whiter" lead means clear-toned colors. The extreme fineness means better mixing quality, greater covering capacity, more ease in spreading—a paint that's always uniform and smooth.

Such paints when applied form a beautiful elastic, tough, protective coat that stays. They are known as "Fuller's Specification House Paints."

Where "Cheap" Paints Fail

Don't Figure Paint Economy as "Cost per Gallon."

"Cheap" paints can't compete with good paints in economy. "Cheap" paint covers less—you buy more gallons. It is harder to spread, requires more work—so you pay more labor cost. Your "saving" in less cost per gallon is very quickly eaten up.

Cheap paint starts to crack in twelve months. Good paint remains good five or more years. It is really the cheap paint that is expensive. Don't allow surfaces to rot—it costs less to paint them.

There is no real cost in painting with the best paint. Depreciation of an unpainted building far exceeds the cost of paint.
