## Wamic News

Many attended the funeral of Mrs. Cecil Mayfield, held Friday, at eleven o'clock, the remains being brought from The Dalles where she died the previous Wednesday. Rev. J. I. Parker, of Wapinitia, officiating at the funeral. Mrs. Mayfield had been ill for some time, suffering with a cancer in her side and had spent the winter in The Dalles and Portland where she took medical treatment. When her condition became serious she expressed a wish to be brought to her home and had come to The Dalles on Saturday previous to her passing away on Wednesday. Mrs. Mayfield was well known here, having lived on Smock a number of years and had won many warm friends who are saddened by her death. A num-

## Gum vs. Street Cars

What's that? Portland girls eating street cars you say?

Well, not exactly, but it amounts to the same thing.

According to the United States census reports, the per capita consumption of candy and confectionery last year was near \$5. This would mean around \$1,500,000 for the city of Portland, and \$1,500,000 would buy about 100 brand new, modern trolley cars of the type now in use in Portland.

But then, that's nothing. The men folks were worse yet. More than 150 trolley cars "went up in smoke" in Portland last year for the consumption of cigars and cigarettes aggregated somewhere around \$2,500,000.

## Farm Reminders

Weevil infested beans and peas can be treated with carbon-bisulfid to destroy the weevils before planting. The seed to be treated is usually placed in a tight receptacle of some kind and the liquid either poured over them or placed in a saucer on top of the seed. The container is covered and left for 24 hours. The dosage is 1½ ounces for 10 cubic feet of space. Dipping the seed in boiling water and immediately cooling will destroy most of the weevils. The new crop is usually infested by planting infested seed.

A light application of land plaster on the clover crop will stimulate the early growth of the clover. The amount is 40 to 80 pounds to the acre.

All seed potatoes while still dormant and before they are sprouted should be given the corrosive sublimate treatment.

The presence of flies is an indication of uncleanness, unsanitary conditions, and improper disposal of substances in which they breed. Screening the food
