A Once-a-Week Service to Weeklies and Semi-Weeklies Outside Large Cities and County Seats

Diversification and crop rotation lead to well organized and profitable farming.

All roots that taint milk should be fed immediately after milking. This applies especially to turnips and similar roots.

Cows in good condition and producing less than one pound of butterfat daily will usually not require grain if the pasture is good.

In marketing fruits and vegetables no one factor is more important than careful grading. If constantly adhered to it builds good will and creates confidence.

Mineral food for hens is best supplied in the form of oyster or clam shells, or limestone, which supply the calcium for eggshell formation. Bone meal may also be used to advantage, especially to supply the phosphates, and is usually mixed in with the mash ration.

A total of 19,492 miles of surfaced roads was constructed by State highway departments during 1926, according to information compiled by the Bureau of Public Roads of the United States Department of Agriculture. Of the mileage 13,664 miles was laid over former earth roads and 5,827 miles represented a rebuilding of old surfaces.

It is desirable to keep floors of dairy barns as clean as possible. No washing process should be practiced that leaves the floors wet all the time. This condition is unhealthy. It should be remembered that floors will not dry up so quickly in cold weather as in warm weather, and the cows should not be made to lie on a wet floor; even though heavily bedded.
