FARMERS AND FAIRS

Fair time is approaching and prospective exhibitors should be planning to make the most of their opportunities to show their best products. The real success of a fair, whether it be one embracing a state, a county, or only a local community, depends more on the number of exhibitors than upon the number of exhibits.

That a farmer can not display a great variety of superior products should not prevent him from entering at least a few. Even though a prize is not won, the effort to win is stimulating and beneficial to every exhibitor.

In these days of home demonstration agents more attention is being given to exhibits by farm women and girls, and these should be encouraged in every way possible. There are few farms which could not make a creditable exhibit of some kind and no farm should be unrepresented in its local fair.

Congressman Hull of Illinois has written a piece about "Learning to Be a Congressman." Most of them are more interested in learning how to stay that way.

The presidential candidates will be officially notified soon. We hope they will not be too surprised to think of something nice to say.

Even if Mr. Shaver doesn't approve of Mrs. Shaver's political talk he probably shows discretion in not letting on.

A cave in Sicily magnifies the voice fifty times. Wouldn't Senator Heflin simply adore that?

The campaign is developing some promising prospects for the Ananias Club.

INSIDE INFORMATION

Attractive stitchery on children's clothes can be done by loosening the tension on the shuttle, and winding silk or wool embroidery yarn on the bobbin. The design is marked and stitched on the wrong side with plain white or matching thread for the upper thread.

Thick lamb chops may be seared on each side and on the edges in the broiling oven or a very hot skillet, and the broiling finished in the oven. They should always be served piping hot, so it is necessary to have all the other dishes of the same meal ready when the chops are done.

A large number of stains can be removed by water without harm to the fabric if handled promptly. Un-

less the stain is known to be insoluble in water and the fabric water-spots, or runs, it is best to try water first. Test the effect of water on an inconspicuous part of the garment.

A tasty way to cook string beans is to shred them finely, and give them a short quick cooking in a comparatively small amount of lightly salted water. Remove the tips, ends, and strings, and cut the beans lengthwise, into long thin shreds, with a pair of scissors. If the beans are young they will cook with melted butter in about 15 to 20 minutes. Tender in from 15 to 20 minutes. They will keep their bright green color and have a delicate fresh flavor. Season them with melted butter, and add more salt if necessary.

Refreshing ices for summer desserts can be made from almost any fruit juice sweetened to taste and flavored with a little lemon if the juice lacks acidity. White of an egg may be added when the ice is partly frozen.

One of the easiest emergency desserts for a "company" menu in summer is shortcake, made with any fresh fruit, whipped cream, and either sponge cake or biscuit dough. Peaches, raspberries and bananas all make good shortcakes.

When binding the neck of a dress, use a double bias fold about three-fourth of an inch wide when folded. Place the raw edge along the neck of the garment with the binding lying on the right side. Stitch about a quarter inch from the edge. Turn the binding over and baste over and baste down, without turning in the folded edge. Stitch again on the right side, close to the first stitching. This catches the binding at the back and makes a neat, firm finish.

Chewing gum is hard to remove from clothing, and sometimes leaves a stain. Chewing gum usually contains a gum known as chicle, which has been boiled down, flavored and sweetened. Resins of various kinds are sometimes used. A gum stain can often be softened with an egg white and then washed. Prolonged treatment with carbon tetrachloride is also satisfactory, as a rule, although it may be necessary to remove traces by sponging with water at intervals.

OREGON NEWS NOTES

Lakeview—Surfacing of Quartz Mountain highway completed.

LaPine—Work starts on LaPine and Fort Rock road construction project.

Gold Beach—Concentrates running \$400 to the ton in gold and silver taken from Curry mine.

Milton—New building code in effect here, with fire preventive provisions.

Condon—New lumber mill at Kinzua to start working by September 1.

Klamath Falls—New ladies apparel shop opened here.

Early and late lamb crops very good, with light losses.

RADIO PLAYS STELLAR ROLE IN MODERN BALLOON RACING

Special Receiving Equipment Built for Use in a Balloon

At least four of the fifteen contestants in the last Gordon Bennett International Balloon Race were equipped with radio receivers. These pilots deliberately sacrificed precious weight in the small basket suspended from the huge gas bags in return for the advantages to be gained through the use of radio.

The skill required in piloting a big gas bag is not generally appreciated by the laity, hence the need for radio may not be altogether clear. A balloon having no motive power of its own, must drift along with the winds, somewhat after the fashion of a sailing ship. However, the balloon has one decided advantage over the sailing ship, in that it moves in the vertical as well as the horizontal plane. By throwing out ballast, the pilot can rise; and by valving the gas, the pilot can descend. Skill in piloting the balloon is necessary to take full advantage of the favorable winds that exist at various levels, and to avoid adverse winds and serious storms. Hence a knowledge of meteorological conditions is an invaluable aid to successful ballooning.

There is still another human element that enters into consideration. A balloon in flight does not have the noise, the dash and the vibration of the swiftly moving airplane or airship. Instead, the big gas bag floats along with the wind, and, at night, the balloonist is completely enveloped in a black isolation unbroken by any human contact. This monotony is a serious factor in competition and must weigh in the ultimate result.

With this foregoing picture in mind, it can be understood what radio

means to the balloon pilot. During the annual races, the National Broadcasting Company undertook to broadcast regular bulletins giving weather reports and news of the other contestants.

Aside from the invaluable weather and news bulletins thus flashed to them, the fortunate radio-equipped balloons were enabled to listen to the entertainment as broadcast far below in their lonely vigil throughout the night.

Ernest Demuyter, pilot of the Belgian entry, equipped the Belgica, with a special adaptation of a radiola super-heterodyne, supplied by the Radio Corporation of America, which was mounted in a weather-proof cabinet including the batteries and a loop antenna. The loudspeaker was of the cone type, also mounted in a special weather-proof cabinet with a leather carrying strap. The receiver was suspended from the ring of the gas bag by means of leather straps, so that the entire cabinet, with its enclosed loop, could be orientated to take direction bearings by means of intercepted broadcast signals. Prior to the flight, the receiver was tested on the roof of the tallest building in Detroit, and signals 250 miles distant were brought in clear and loud. Although this receiver is not primarily intended as a radio direction finder or radio compass equipment, accurate bearings were taken and compared with a map.

Thus in free ballooning, as well as in airplane and airship flight, and on the high seas, radio has taken its place as an indispensable aid to the navigator.

NATIVES PUZZLED BY U. S. SCIENTIST

Think Anthropologist Is Hunting for Treasure.

Washington.—When an American comes down to the Caribbean and begins industriously digging along a coast where pirates once flourished, what is he probably looking for? If you answer "buried treasure" you agree with what the people of Santo Domingo thought when Herbert Kreiger of the United States National museum landed at their island with a request to dig among the shell heaps left there by prehistoric cave men.

Mr. Kreiger had credentials. He is a straightforward person. But—he had a strong chest with his baggage! The Santo Dominicans remembered that a few years ago a pot of Haitian gold was found on the governor's estate, and they watched the digging American. The strong chest which Mr. Kreiger carefully loaded with bits of broken crockery of prehistoric Indians was examined incredulously. When the visitor sailed for the States with no doubloons and with a perfectly satisfied expression on his face, they were still puzzled.

In his report of the expedition, which Mr. Kreiger has just presented to the Smithsonian Institution, he says that the caves of Samana bay yielded some thirty kinds of shells. These represent the remains of seafood dwellers who occupied the island before modern inhabitants came. Mr. Kreiger also collected bones of birds and animals cast into the refuse heaps of the cave dwellings, and brought back specimens to show the kind of animal life that abounded in this tropical island before Columbus' time.

The task of piecing together the civilization of the prehistoric Indians was made more difficult by the fact that fertilizer concerns have removed large quantities of the shell heaps in collecting bat guano and limestone phosphate from the caves.

"The region is of special interest to anthropologists," Mr. Kreiger reports, "because of the presence of many heretofore unexplored aboriginal village sites and cave habitations."
