Cool Salads for Hot Days

WITH hot days in the offing, every housewife likes to serve cooling salads, but somehow the idea of preparing one in the stifling afternoon for supper doesn't sound so attractive. So why not make the salad in the morning when you are in the kitchen anyway? Use gelatin to mold the fruits or vegetables, put it in the ice-box to keep cool, and there your refreshing salad is, in the evening—all ready to turn out and serve.

Colorful and Cheerful

Some recipes for gelatin salads are:

Jellied Cheese and Pineapple Salad: Soak one tablespoon gelatin in four tablespoons cold water, then dissolve over hot water. Mash two three-ounce cream cheeses, add two cups crushed pineapple and eight-

een sliced, stuffed olives. Add dissolved gelatin, and season to taste. Pour into individual wet molds and chill. Serve unmolded on lettuce, garnishing with whole stuffed olives and cream mayonnaise.

Jellied Asparagus and Pepper Salad: Soften one tablespoon gelatin in one-fourth cup cold water. Add enough water to juice from a can of asparagus tips to make one cup. Add one bay leaf and one sprig celery tops, and boil three minutes. Strain over gelatin, and stir until dissolved. Add one and one-half finely diced green peppers, one sliced, boiled carrot and one-fourth teaspoon salt. Arrange asparagus tips, tip end down, around the edge of a fluted mold. Pour gelatin mixture in center and chill. Serve unmolded on lettuce, garnished with mayonnaise.

WIRING PLANS ON THE FARM

Investment in Good System Is Advised by Engineer

"The wiring system of an electric installation is the foundation which determines the uses to which electricity can be put and the convenience of its application," says R. H. Rogers, electrical engineer.

"Just as a lack of good road prevents the automobile from attaining its greatest usefulness in many rural districts, so lack of complete and adequate wiring on the farm will prevent the farmer from using electric service to the fullest advantage in lighting buildings and grounds and doing the manifold tasks of household work and farm chore."

"It is well to consider that the investment in a good wiring system results in a permanent improvement continuing to give service year after year without changes or further expense. If an inadequate wiring system is installed it will not be long before additional expenditure will be necessary, if electricity is to be used to the best advantage.

"The electric utility can be of great assistance to the farmer in preparing specifications for wiring. A public utility, organized to furnish service, has the responsibility and desire to assist its customers in securing the most satisfactory use of electricity. Its knowledge gained through the years of experience, will be valuable in aiding the farmer to avoid costly mistakes and to provide a wiring system which will be both economical and complete."

A Once-A-Week Service to Weeklies and Semi-Weeklies

The careful live stock feeder watches each animal and feeds according to the animal's needs. Many farm animals are underfed and can not produce profit on the feed they get.

In the Rocky mountain and Western states, the forests are dry as tinder this time of year. Watch out for fire. Be extra careful with matches and "smokes" and campfires.

The growing of one intertilled crop following a good clover or alfalfa sod is excellent in a rotation, but the common practice of growing two or more intertilled crops in succession after the clover or alfalfa is a mistake. Intertillage inevitably causes rapid destruction of the soil organic matter.

Sweet-cream butter made for winter use will keep best if stored in brine made of one part of salt to three parts of water, says the Bureau of Dairy Industry, U. S. Dept. of Agriculture. Butter stored by the bureau in dry salt and paraffin deteriorated on the surface. Be sure to use enough salt in the brine, wrap the butter in parchment butter paper, and see that the rolls are entirely submerged in the brine.

Bacteria are single-celled plants, so small they can not be seen with the naked eye. They are found in large numbers in the soil and in many

other places. They multiply rapidly when given proper food and a warm temperature. Warm milk is an ideal food for bacteria. Bacteria cause milk to sour and produce other undesirable changes. For this reason milk should be produced in a sanitary manner and kept cold.

Every automobile should be equipped with ash receivers for both front and rear seats, for the benefit of the smokers of the family. Many a woods fire or grass fire is caused by burning cigarette or matches tossed out of moving cars along the road.

Various experiments on the use of alfalfa meal for livestock that the grinding of alfalfa hay into meal has little effect on the feeding value, the chief advantages of the meal being that it can be fed with less waste than hay, is more convenient form, and can be shipped at less expense.

New Zealand spinach stands the heat better than ordinary spinach and so is obtainable during the hottest months. Strip the leaves from the stem, wash well, and cook in an uncovered pan with only enough water to prevent burning. Add salt when the spinach has wilted sufficiently, chop, and mix with butter before serving. Serve vinegar or sliced lemon with spinach.

Many vegetable combinations are good when you do not have enough of any one vegetable to go around. Carrots and peas in equal quantities string beans and carrots; celery and turnips; rutabaga and potato; tomato and onion, or tomato and okra; corn, string beans, onions, beet, and peas, blends of different greens.

Feed flavors and odors in milk are most frequently caused by ranculent feeds. When fed to dairy cows one hour before milking, silage made from corn, alfalfa, sweet clover, or soy beans, and green alfalfa, cabbage, turnips, rape, and kale seriously affect the flavor and odor of milk. Milk is only affected slightly by green rye, green cowpeas, potatoes, fried beet pulp, or carrots. Green corn, green oats and peas, green soy beans, pumpkins and sugar beets have practically no effect on the flavor and odor of the milk.

Chicken mites thrive in warm weather. It is advisable to watch the roost connections, says the Oregon experiment station, and if any mites are present, to paint all connections and the bottom of them with a strong germicide or wood preservative. Crude oil is sometimes used, but has little lasting power, it is found.

NEW RUST RESISTENT WHEAT
Canadians Develop Grain Immune From Devasting Disease

The Oregon Grange Bulletin says that the Canadian department of agriculture has developed a wheat which can resist rust, but seed will not be available in large quantities for two or three years, though it is expected that eventually the rust-resisting wheat will save Canadian producers millions of dollars every year.

"Oregon State"

A National and State College maintained as described by Senator Morrill, founder of the Land-Grant Colleges, "to offer opportunity . . . for a liberal and practical education . . . for the world's business, for the industrial pursuits and profession of life"—

Oregon's Land-Grant College, now in its 62d year, affords training in 19 degree-granting schools and departments.

AGRICULTURE (B. S., M. S. degrees)

Agricultural Economics, Agricultural Education, Animal Husbandry, Dairy Husbandry, Farm Crops, Farm Management, Horticulture Pomology, Vegetable Gardening, Poultry Husbandry, Soils, Agricultural Products, Landscape Architecture, Sciences Basic to Agriculture (6 majors.)

CHEMICAL ENGINEERING (B.S., M.S. degrees)

COMMERCE (B.S. degree; M.S. in Agricultural Economics, Rural Sociology) Accounting and Management, Advertising and Selling, Banking and Finance, General Business, Real Estate, Secretarial Training Marketing, etc.

ENGINEERING (B.S., M.S. degrees)

Civil (Structural, Highway, Sanitary, Hydraulic, Railroad, Construction); Electrical (Power, Railways, Lighting, High Voltage, Telephony); Mechanical (Machine Design, Heat Power,

Ventilation, Heating, Gas, Refrigeration, Aeronautical) Industrial Shop Administration.

FORESTRY (B.S., M.S. degrees)

Logging Engineering, Lumber Manufacture, Technical Forestry.

HOME ECONOMICS (B.S., M.S. degrees)

Clothing, Textiles, and Related Arts; Foods and Nutrition; Household Administration; Institutional Management.

MILITARY SCIENCE AND TACTICS (B.S. degrees)

Field Artillery, Engineers, Infantry.

MINES (B.S., M.S. degrees)

Geology, Mining Engineering, Metallurgy.

PHARMACY (Ph.C., B.S., M.S. degrees)

Pharmacology, Pharmaceutical Analysis, Pharmacognosy.

VOCATIONAL EDUCATION (B.S., M.S. degrees)

Administration, Supervision, and Teaching of Agriculture, Commerce, Home Economics, Industrial Arts.

The School of Basic Arts and Sciences, Industrial Journalism Library Practice, Physical Education, and Music—service department not leading to degrees—together with a privately supported department of Religion, afford additional training supplementary to the major curricula.

Freshman Week Begins September 23
