

Scrofula

Are entirely free from it. It may develop so slowly as to cause little if any disturbance during the whole period of childhood.

It may then produce dyspepsia, constipation, and marked tendency to consumption, before causing eruptions, sores or swellings.

To get entirely rid of it take the great blood-purifier,

Hood's Sarsaparilla

In a liquid form or in chocolate tablets known as Sarsatabs. 100 doses \$1.

To Know Ourselves.
How can a man learn to know himself? By reflection never, only by action. In the measure in which they seek to do they find that they know what is in them. But what is thy duty? The demand of the hour—Goethe.

The Limit.
"You say she is modest?"
"Extremely; she is too modest to take a bath in one of those newly invented glass bath tubs."
"I don't see why?"
"Because it is transparent."

Quick Reflex Action.
Shocked and Grieved Parent—Tommy, where did you get those beautiful little spotted eggs? You have been robbing some bird's nest, you wicked boy!
Tommy—"I'm going to set the old hen on 'em, mamma, and raise some pretty little birds, so you can put some more of 'em on your hat."—Chicago Tribune.

One of the Essentials

of the happy homes of to-day is a vast fund of information as to the best methods of promoting health and happiness and right living and knowledge of the world's best products.

Products of actual excellence and reasonable claims truthfully presented and which have attained to worldwide acceptance through the approval of the Well-Informed of the World; not of individuals only, but of the many who have the happy faculty of selecting and obtaining the best of the world affords.

One of the products of that class, of known component parts, an ethical remedy, approved by physicians and commended by the Well-Informed of the World as a valuable and wholesome family laxative is the well-known **Syrup of Figs and Laxid of Senna**. To get its beneficial effects always buy the genuine, manufactured by the **California Fig Syrup Co.**, only, and for sale by all leading druggists.

C. Gee Wo

The well known reliable **CHINESE ROOT AND HERB DOCTOR**

Has made a life study of roots and herbs, and in that study has gathered up the most valuable secrets of the world's best medicines.

NO MERCURY, POISONS OR DRUGS USED.—The Cures Without Operation, or Without the Aid of a Knife.

CURES S. S. S. RHEUMATISM

Every case of Rheumatism has its origin and its development in the blood. It is not a disease which is contracted like a cold, but it is in the blood and system before a pain is felt, and the changes in the weather or any physical irregularities, such as a spell of indigestion, bowel disturbance, etc., are merely the exciting causes producing the pains and aches, which are the natural symptoms of the disease. Rheumatism is caused by an excess of uric acid and other corrosive, irritating poisons in the blood, which are carried through the circulation to every part of the system. Every muscle, nerve, membrane, tissue and joint becomes saturated with these acid, irritating impurities, or coated with fine, insoluble caustic matter, and the sharp, piercing pains or the dull, constant aches are felt with every physical movement. When the blood is filled with uric acid poison, permanent relief cannot be expected from liniments, plasters, or other external treatment. Such measures give temporary relief, but in order to conquer Rheumatism and bring about a complete cure, the uric acid and other inflammatory matter must be expelled, and this cannot be done with external treatment. S. S. S. cures Rheumatism because it is a perfect and entirely vegetable blood purifier. It goes down into the circulation, neutralizes the acids, and dissolves the irritating deposits which are pressing on the sensitive nerves and tissues and producing pain, enriches the weak, sour blood, and removes every atom of impurity from the circulation. So instead of being a weak, sour stream, distributing uric acid to different parts of the system, the blood is strong and healthy and therefore able to supply every muscle, nerve, bone and tissue with nourishment and strength. Then the inflammation and swelling subside, the pains and aches cease, and not only is Rheumatism permanently cured, but under the fine tonic effects of S. S. S. the entire general health is benefited and built up. In all forms of Rheumatism, whether acute or chronic, S. S. S. will be found a safe and reliable treatment. Special book on Rheumatism and any medical advice you desire will be furnished free.

THE SWIFT SPECIFIC CO., ATLANTA, GA.

W.L. DOUGLAS SHOES

\$3.00 SHOES AT ALL PRICES, FOR EVERY MEMBER OF THE FAMILY.

W. L. Douglas makes an \$8.00 shoe that any other manufacturer in the world, because they had shape, fit better, wear longer, and are as good value than any other shoe in the world to-day.

W. L. Douglas \$4 and \$5 Gilt Edge Shoes cannot be Equalled At Any Price

W. L. Douglas is a name and name is stamped on bottom. You will find this the best shoe dealer everywhere. W. L. DOUGLAS, BROOKLYN, N. Y.

A Perverted Bromidiad.

"Oh, girls," exclaimed the gushing maiden on the crowded street car, "I've just washed my hair and I can't do a thing with it!" Just then the car gave a lurch and she shrieked as the man in front of her stepped on her foot.

"Beg pardon," muttered the weary strap-hanger who had done the stepping—"You see, I've just washed my foot and I can't do a thing with them."

—Judge.

Black Coated Paupers.
We are having not only a nation of shopkeepers, but a nation of clerks. Every young man wishes to be a clerk, every young woman a typewriter. The profession is frightfully overcrowded and frightfully underpaid. We have neither servants nor laborers, only an army of black-coated paupers.—London Graphic.

Mother's Mind.
Mrs. Winslow's **Soothing Syrup** is the best remedy to use for their colic during the teething period.

The Real Thing.
"Do you think that unconscious spell woman, Miss Sharp had at the ball was a success?"
"No, I am sure it was a feint."
"What do you mean?"
"She had declared her intention of making a sensation at the ball, and I think she was like her intention—she wanted to be carried out."

The Society for the Destruction of Vermis.
An English organization, with the object of warring on the rats in that country.

Extremes.
"Pardon me," said the dower with the mole on her chin, "but there is hardly room for two of us here if you are going to keep that thing on your head."
"O, I guess there's room enough, mad am," answered the sharp featured young woman with the umbrellas hat, who occupied the adjoining seat. "I'm not making any kick about the space you take up."—Chicago Tribune.

STORM IN OKLAHOMA

Whole Town of Vici Is Torn to Pieces and Scattered.

EIGHT PERSONS KNOWN KILLED

Huge Mailstones Destroy Crops and Injure Livestock—Devastation in Farming Districts.

Woodward, Okla., May 12.—At least eight persons were killed and scores of others injured in the several tornadoes in Northwestern Oklahoma yesterday evening.

There was a succession of tornadoes between 5 o'clock and 10 o'clock P. M. They appeared first in the western part of the devastated district and moved toward the east. The most serious occurred in the vicinity of Arnett, where fully 30 persons are believed to have been killed. Nearly all of these victims are residents of the farming districts.

The only town known to have been destroyed is Vici, a postoffice town in the southern part of Woodward county, where it is said there is not a house left standing. Postmaster E. A. Speck has asked that a postoffice inspector report on his office, which was demolished and the contents scattered in all directions.

The report of four deaths at Arnett includes the two at Little Robe, and is confirmed by the news that four caskets have been sent overland from Gage to North, Gage being the nearest railroad point.

Reports from the neighborhood of Vici state that the heavy hail that accompanied the storm did much damage to property, crops and cattle. Mailstones measuring 25 inches in circumference are said to have fallen.

QUESTIONS AND ANSWERS.

Valuable Information to Pacific Northwest Inquirers.

By Professor Elliott, Washington State College, Pullman.

Pullman, April 25.—This week the Washington State College experiment station received the following inquiry from W. L. R., who resides in Seattle:

"I wish some practical suggestions from you relative to the best grasses or grains to sow on 'upland' in Kitsap County, on sandy loam, which dries out too early in dry seasons to produce most crops. After having been cleared off, this land was allowed to grow up with young fir and ferns. Sowing rye in the fall, and plowing the rye under in the spring to plant potatoes has been recommended to me, but so far as I know little experimenting has been done in Kitsap County on upland soil. There are beds of muck near the lake. Would it be advisable to pile and dry this muck and later use as a dressing for strawberries, small fruits, and in starting apple trees?"

Professor Elliott replied: "I believe that the best grass for the region you mention is orchard grass, although I am not an authority on growing inquiries well. The land is much benefited by the application of land plaster, or gypsum, on sandy loam, which dries out too early in dry seasons to produce most crops. After having been cleared off, this land was allowed to grow up with young fir and ferns. Sowing rye in the fall, and plowing the rye under in the spring to plant potatoes has been recommended to me, but so far as I know little experimenting has been done in Kitsap County on upland soil. There are beds of muck near the lake. Would it be advisable to pile and dry this muck and later use as a dressing for strawberries, small fruits, and in starting apple trees?"

WHAT AILS THE MILK?

Also a Sure Test for Tuberculosis in the Cow.

By Dr. K. W. Stouffer, Assistant Professor of Surgery, Washington Agricultural Experiment Station, Pullman.

"Will you tell me what is the matter with milk when it turns thick and slimy, resembling a mixture of hot water and starch," writes A. H., from Chelan Falls. "Whenever my cows miss being milked, her milk for several days thereafter has this appearance. It litters all right, but to me it seems queer that milk should act this way. Also, tell me how to find out if an animal has tuberculosis."

Dr. K. W. Stouffer, assistant professor of surgery, replied: "The coagulation of the milk you refer to is no doubt due to a slight inflammation of the udder, due to the retention of the milk too long, coupled with some bacterial change in the milk, the latter possibly being due to infection passing through the milk duct of the test. The milk might, or might not, be wholesome, depending upon the organism causing the coagulation. Sentiment would revert against the use of such milk.

"In order to test an animal for tuberculosis, we use a biological product, or toxin, known as tuberculin. This must be injected by an experienced person, hypodermically, and a careful record kept of the temperature for several hours both before and after the injection. The test is very reliable, but in order to perform it, a person must have had specific instruction, as well as some experience in its application."

KOREA WAKING UP.

Begins to Realize the Importance of Maintaining Forest Area.

Korea, the Hermit Kingdom, is waking up to the necessity of protecting its remaining forests and replanting depleted tracts. This is being done by the Japanese, who are furnishing the inspiration and part of the money which will produce the change from the old order of things to the new. A school for training Korean foresters has already been put in operation.

The two governments drew up a cooperative agreement last spring and outlined a plan for the wise use of the forests in the Yalu and Tumen valleys, as well as a national forest policy for Korea has been developed. The new Korean forest laws are similar to those of Japan, according to United States Consul-General Thomas Sammons of Seoul.

Although Korean forests have been exploited and neglected, and the country has suffered severely from drought, floods and erosion, the population is beginning to realize the importance of maintaining its forests. The country is now beginning to realize the importance of maintaining its forests.

ALL FOR GOOD OF PRODUCER

Commission Favors Produce Business of Express Companies.

Washington, May 12.—An important report was transmitted to the senate by the Interstate Commerce commission on the results of inquiry made by the commission as to whether the express companies of the country were engaged in the business of buying, selling or handling consignments of fruit, vegetables and oysters entering into interstate commerce.

The commission finds that for the handling of perishable commodities the express companies have established order and commission departments. The agents of the companies undertake to find a market for producers and to handle the products offered. The products are marketed and the proceeds less the express charges, are turned over to the producers.

The commission reports that express companies do not buy or sell commodities transported by express, but that express companies are permitted to continue their business in the handling of perishable goods. It is a state business through order and commission departments, subject to the prohibitions of law against unjust discrimination.

After having been cleared off, this land was allowed to grow up with young fir and ferns. Sowing rye in the fall, and plowing the rye under in the spring to plant potatoes has been recommended to me, but so far as I know little experimenting has been done in Kitsap County on upland soil. There are beds of muck near the lake. Would it be advisable to pile and dry this muck and later use as a dressing for strawberries, small fruits, and in starting apple trees?"

QUESTIONS AND ANSWERS.

Valuable Information to Pacific Northwest Inquirers.

By Professor Elliott, Washington State College, Pullman.

Pullman, April 25.—This week the Washington State College experiment station received the following inquiry from W. L. R., who resides in Seattle:

"I wish some practical suggestions from you relative to the best grasses or grains to sow on 'upland' in Kitsap County, on sandy loam, which dries out too early in dry seasons to produce most crops. After having been cleared off, this land was allowed to grow up with young fir and ferns. Sowing rye in the fall, and plowing the rye under in the spring to plant potatoes has been recommended to me, but so far as I know little experimenting has been done in Kitsap County on upland soil. There are beds of muck near the lake. Would it be advisable to pile and dry this muck and later use as a dressing for strawberries, small fruits, and in starting apple trees?"

Professor Elliott replied: "I believe that the best grass for the region you mention is orchard grass, although I am not an authority on growing inquiries well. The land is much benefited by the application of land plaster, or gypsum, on sandy loam, which dries out too early in dry seasons to produce most crops. After having been cleared off, this land was allowed to grow up with young fir and ferns. Sowing rye in the fall, and plowing the rye under in the spring to plant potatoes has been recommended to me, but so far as I know little experimenting has been done in Kitsap County on upland soil.
