Farm Telephones

In some parts of the country telehones are becoming very common. ems that once a telephone is estabished in the family it is there to stay. Other sections of the country are very much behind the times in this respect, robably because no one has gone ahead with the preliminary arrange

A farm telephone is not only a great luxury, but it is fast becoming an absolute necessity. With the addition of more business to the farm every year and the scarcity of labor anything that saves steps is worth money. When you get accustomed to doing business over the telephone you realize its reat value.

A short time ago I heard a farmer order 100 bushels of seed oats by phone from another farmer about ten miles away. He had seen a sample at the fair last call and made the negotiations accordingly. The business was transacted in about five minutes while the farmer was sitting at his lesk after reading his morning mail left at the box by the rural delivery man. It would have taken him all day to get his mail and drive to the other farmer and buy his seed oats. But there is a social side to farm ife that is fostered by the telephone. often happens that a woman is left alone for the day and she can easily make arrangements to have a neighor call and spend the time pleasantly, instead of feeling lonely. Then it

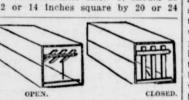

asion requires. There are always people in a neighborhood who are public-spirited enough to go ahead with the necessary arrangements to establish a telephone ervice. Others should encourage them romptly by subscribing to the fund equired. Everybody is benefited, because the arrangement is mutual in the neighborhood. — Agricultural Epitomist.

s so easy to make social arrangements

or evenings or to meet friends as oc-

A Trap Nest.

The accompanying plan of trap nest s quite simple and can be made from a box of suitable size. It should be 12 or 14 inches square by 20 or 24

inches long. The slats should be nailed o a crosspiece about one-quarter the drawbridge, where the wind held the baugh has been at work on a plan to distance from the top. A couple of vessel firmly until the passengers were unify and improve the writing, and nails are driven through the box and into the crosspiece to swing on. Half way back, on the inside, a narrow piece of board is nailed, back of which the nest is made.

To set the trap simply raise the slats inward from the bottom 8 or 9 inches high and place a small stick under one of the slats. As the hen According to the new code, writing enters the door is raised off the stick. The teacher will be about five slats for a box 12 or 14 which falls to the floor. There should inches in width, slats close against inch strip at bottom.

When Vegetables Mature.

The following list will show the gardener how long after planting the various common vegetables will mature their growth and be ready for use:

Study Fertilizer.

A few simple fertilizer maxims are so important that they should be Fertilizers may be direct or indirect in action. The former contains needed plant food, the latter enables the plant to get food from soil or air. Lime is not plant food under common conditions; it corrects a bad condition of soil-sourness-and unlocks soil materials. Sulphate of iron (copper as), sulphate of copper (blue stone) sulphate of magnesia (Epsom salts) and sulphate of lime (gypsum) are among these indirect fertilizers.

To Sharpen a Lawn Mower. First remove the handle, to get it out of the way. Take a flat file and the horizontal or stationary evenly and alike at its entire length. adjust the revolving blades so they will slightly rub on the horizontal blade.

Getting Even with the "Town Man." We have a neighbor who has two cows and 104 hens. From these he sold eggs and butter amounting to \$75 between Jan. 1 and May 1, 1908. While this is not such a great sum, it helps wonderfully when we consider that a Madrid, July 12.-The First brigade large family had all the butter, milk between this farmer and the man in

Hog Cholera.
In the way of treatment the United States Bureau of Animal Industry has discovered a vaccine which saves about 80-odd per cent after cholera ap pears in a herd, and a larger per cent if vaccinated before the disease is in troduced. Time will demonstrate the practicability of this method. The pacteriology department of the Kansas State Agricultural College is also working along these lines, but is not yet ready to announce anything but

When symptoms of cholera appear in a herd, it is wise to dip the whol herd, disinfect their quarters thoroughly, give them a slight change in feed, and add to this about five drops of tincture of prickly ash for each hundred pounds of hog once or twice a day. The old remedy of wood ashes and salt is good in many instances. A little powdered sulphate of copper dried sulphate of iron or charcoal given daily when the animals are not perfectly healthy frequently does much good. After all, the old adage, an ounce of prevention is worth a pound of cure, holds good here.

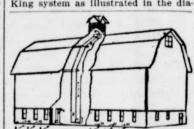

Saves the Fertilizer. Fertilizer is expensive. By the old method of distributing it there was usually enough wasted to represent a

pretty penny. Then came along a Virginia man and invented the hand fertilizer dropper. This device consists of an odd shaped bucket, running to a point at the bottom and having a small open ing there, through which the contents filters. A

hinged valve, operated by a rod that leads to the handle of the bucket, controls the flow. The top of the rod is connected to a crossbar which runs under the handle of the bucket. This bar is in close reach, and, when resting on the top of the bucket the valve is open. To close the valve the operator merely extends a finger and lifts the bar, thus shutting off the fertilizer. The valve flares at the bottom, spreading the fertilizer in a broad, fine stream. For small farms, gardens and lawns this device is of great convenience, and is a money saver.

Take an ordinary baking pan and have the tinsmith rivet on an "ear" on one side for nailing to a tree. Have him also make a hole in the bottom in one corner, that the water can be let out every day and the pan be kept clean. Nail the pan to a tree about twelve inches from the ground, so the chicks can drink without getting into it with their feet. The birds will soon discover that it is a fine place from which to get a drink on hot days. Sometimes they find, too. that it is a convenient place for a bath, and this of course makes the water dirty. But it is not much trouble to refill the pan with clean water, and this should be done two or three times a day. Chickens and birds require a great deal of water, and they often suffer for lack of it. Don't neglect them.-Boston Herald.

The King System of Ventilation Ventilation for stables and barns is now regarded as one of the essentials to be provided for in construction. The King system as illustrated in the dia-

SHOWING THE VENTILATING FLUES. gram consists of two sets of flues one set to admit the fresh air, the other to furnish an escape for the vitiated air. The inlet or fresh air flues should be placed not more than ten feet apart and located in the exterior walls of the barn. The outlet may include one or more flues.

As Usual. He bought a hoe, a rake, a spade, Some little seeds to sow, At last he got the garden made And saw the green things grow.

He work'd the rows and beds each day; Each little plant he knew, And as he smiled and sweat away

Oh, joy; how fast they grew. No floods came down to wash things out.

No frosts to kill or blight; No neighbor's chickens scratched about; No kine strayed in at night. Each seed he planted did its best And not a one did rot-No other garden, East or West,

Such veg'tables begot. But still this man did not enjoy These veg'tables so new, For every night a neighbor's boy

weeds.

Spraying to Kill Weeds. Kill weeds by spraying. To make the spraying solution, empty a hun-cook? dred pound sack of sulphate of iron her yet. into a fifty-gallon barrel; fill to the for a few minutes until dissolved. "Let me see—the census gives your Strain through several thicknesses of town about 6,000 doesn't it?" chine with water and stir with a hoe cheesecloth tacked over the manhole of the spraying machine. Apply with 6,000." of the spraying machine. Apply with a powerful spraying machine, producfile the edges of the revolving blades, ing a real mist, free from drops. Use being careful to file each blade alike, about fifty gallons to the acre, and wrote the Junius letters?" being careful to file each blade alike, about fitty gamons day, or on a "I—I don't know, ma'am," and evenly, so all parts will strike spray on a bright, warm day, or on a "I—I don't know, ma'am," and evenly, so all parts will strike spray on a bright, warm day, or on a "I—I don't know, ma'am," and evenly, so all parts will strike dark, damp day; it does not matter, so long as rain does not come within File also the horizontal blade, then eighteen or twenty hours. This spray will not harm grain crops and will kill wild mustard and various other

Scientific Small Farming.

An experiment from which much may be learned is being tried in Hungary. It is embodied in the new land bill, which is now coming into operation. The proposal is to break up 24, 000 acres into settlements, which settlements will be subdivided into plots of seven acres each. But the interesting point is that in the center of each group of small holdings there will be a larger holding of not more than 666 acres, which will be in the hands of a capable and experienced farmer.

What is Castoria.

CASTORIA is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The children's Panacea.-The Mother's Friend.

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children-Experience against Experiment.

Letters from Prominent Physicians addressed to Chas. H. Fletcher.

Dr. F. Gerald Blattner, of Buffalo, N. Y., says: "Your Castoria is good for children and I frequently prescribe it, always obtaining the desired results."

Dr. Gustave A. Eisengraeber, of St. Paul, Minn., says: "I have used your Castoria repeatedly in my practice with good results, and can recommend it as an excellent, mild and harmless remedy for children."

Dr. E. J. Dennis, of St. Louis, Mo., says: "I have used and prescribed your Castoria in my sanitarium and outside practice for a number of years and find it to be an excellent remedy for children." Dr. S. A. Buchanan, of Philadelphia, Pa., says: "I have used your Cas-

toria in the case of my own baby and find it pleasant to take, and have obtained excellent results from its use." Dr. J. E. Simpson, of Chicago, Ill., says: "I have used your Castoria in

cases of colic in children and have found it the best medicine of its kind on the market." Dr. R. E. Eskildson, of Omaha, Neb., says: "I find your Castoria to be a standard family remedy. It is the best thing for infants and children I

have ever known and I recommend it." Dr. L. R. Robinson, of Kansas City, Mo., says: "Your Castoria certainly has merit. Is not its age, its continued use by mothers through all these years, and the many attempts to imitate it, sufficient recommendation?

What can a physician add? Leave it to the mothers." Dr. Edwin F. Pardee, of New York City, says: "For several years I have recommended your Castoria and shall always continue to do so, as it has

invariably produced beneficial results." Dr. N. B. Sizer, of Brooklyn, N. Y., says: "I object to what are called patent medicines, where maker alone knows what ingredients are put in
