

## Little Soldiers

In your blood are the millions of corpuscles that defend you against disease.

To make and keep these little soldiers healthy and strong, is simply to make and keep the blood of the right quality and quantity.

This is just what Hood's Sarsaparilla does—it helps the little soldiers in your blood to fight disease for you.

It cures scrofula, eczema, eruptions, catarrh, rheumatism, anemia, nervousness, dyspepsia, general debility, and builds up the whole system.

### An Infallible Record.

A way of deciding dates of certain important events is suggested by the following anecdote from Lipinotti's. The parents of a college son were disputing as to the date of their last letter to their "hopeful" from whom, somewhat to the distress of the mother, they had not heard for some time. "Are you sure, Thomas," asked the mother, unconvinced, "that it was on the 12th that you last wrote to Dick?" "Absolutely!" was the father's decisive response. "I looked it up in my check book this morning."

### Not Ambiguous at All.

The donkey is—or has been—associated with party politics in other countries besides our own.

In one of England's elections a candidate for Parliament, the late Lord Bath, called attention to himself by means of a donkey, over whose back two panniers were slung, bearing a ribbon band on which was printed, "Vote for Papa."

It must be added, however, that in each pannier stood one of Lord Bath's daughters.

### Unexpected Petee.

With a deftness acquired by long and patient practice the pickpocket extracted an old but well-filled purse from the hip pocket of the unsuspecting old gentleman with the beaming countenance against whom he had carefully brushed when leaving the Tube station, and on reaching a secluded place he opened it.

The contents had been wrapped with great care in numerous thicknesses of blank paper. Removing the wrappings one by one he found in the center of the package a card with this inscription on it:

Young man, give up your career of crime! Nothing in it!—Tilt Bits.

### Defrauded the Government.

Franking privileges were greatly abused in days gone by. The government employee's friends shared in his opportunities. In a letter written by Wordsworth in 1815 the poet said: "By means of a friend in London I can have my letters free. His name is Lamb, and if you add an 'e' to his name he will not open the letters. Direct as below without anything further.—Mr. Lamb, India House, London." Coleridge, too, saw that a postage saved was a postage gained, and made use of the Mr. Lamb of the India House—Charles Lamb.

### Unpardonable Ignorance.

Hostess—You don't know who she is? Why, she's the celebrated Miss de Winter. You must have seen her in "East Lynne."

Guest (with some embarrassment)—No, indeed, ma'am. I was never there in my life.—C. W. T.

### Heroic Remedies.

"According to this magazine," said Mrs. Biffingham, "sliced onions scattered about a room will absorb the odor of fresh paint."

"I guess that's right," rejoined Biffingham. "I know a broken neck will relieve a man of catarrh!"—London Answers.

### Probably Guilty.

"Sir!" thundered the prosecuting attorney, "you are evading my question."

"Darn it," answered the prisoner before the bar, "if you knew the facts in the case as well as I do, you wouldn't blame me."—Birmingham Age-Herald.

### Crop Was a Failure.

"I suppose you know of my family tree?" said Baron Fucash. "Yes," answered Mr. Cumroo. "It may have been a good tree, all right, but it looks to me as if the crop was a failure."—Washington Star.

### Would Be to Him.

Wife—What in the world is a joy ride?

Hubby—It must be the kind a married man takes when he travels alone and rides in the smoking car.

### Thought He Knew Better.

"Well, anyway, it is safe to say that when women really want the ballot they will get it."

"No, I don't think it would be—quite safe for you to say it in the presence of my wife."

### To Correspond.

"I notice the sign 'Clerkship got into disreputable habits' doesn't use the perpendicular style in its handwriting."

"No, and he doesn't use it in his walk, either."

### Prompt Action.

Anxious Friend—Gayman, you ought to do something for that uncontrollable thirst of yours, and you ought to do it quick.

Gayman (putting on his hat)—I'm ready to go and join you in one right now, old chap!

### Logical Conclusion.

"You look sweet enough to kiss," says the impressed young man.

"So many gentlemen tell me that," coyly answers the fair girl.

"Ah! That should make you happy." "But they merely say that," she replies. "They merely tell me the facts in the case and never prove their statements!"—Life.

Save the Baby—Use PISO'S CURE THE BEST MEDICINE FOR COUGHS & COLDS

Should be given at once when the little one coughs. It heals the delicate throat and protects the lungs from infection—guaranteed safe and very effective.

All Druggists, 25 cents.

## TAFT TELLS BOYS TO HANG TO FARM

Deplores Tendency of Young Men to Drift Towards City.

Thinks Americans Must Discard Old Methods of Agriculture and Pay More Attention to Fertilizing Soil—Land Too Valuable for Present Wasteful Methods.

Jackson, Miss., Nov. 2.—President Taft would have young men of America stay on the farm with its plenty and certainty, rather than decide on a life in the city. Mr. Taft indicated his sentiments in this respect in an address at the state fair here yesterday.

"We must admit," he said, "the occupation of the farmer is among one or two of the most independent occupations that go to make this country great—and a state which is great because it is entitled to recognition as typifying Americanism in the highest degree."

"We have arrived at a time in the development of this country and the world when old methods of agriculture must be discarded, if we would keep up with the procession. Land is becoming too valuable to treat it in the old wasteful way. I am glad to note Mississippi has one of the best agriculture institutions in the country."

"Here you have been able to restrain that tendency of your young men to come into cities and live in tenements, in order that they may be where the wheels go round. If I were advising a young man as to his future profession I should say to him there probably is greater opportunity for real reward in the profession of agriculture than in any other."

### TARIFF WAR BEGINS.

France Fires First Shot at New American Duty Law.

Washington, Nov. 2.—France's Rowland for America's Oliver is the action of the Paris government in putting in effect yesterday the maximum tariff against goods coming from the United States. It did not surprise treasury officials.

Ever since notice was given to Paris that the reciprocity agreement with its low rates on both sides of the Atlantic so far as the two governments were concerned would expire at the end of October, this government has been anticipating the step taken at Paris.

This government cannot directly meet the French maximum until next spring, but the question of what to do has been canvassed.

Sparkling wines seem to be the most vulnerable point, for officials here do not assume that this is the beginning of a tariff war of itself. A jump from \$6 to \$9.60 per dozen in the duty on champagne, which is what the restoration of regular tariff rates means at the United States ports, and the unofficial talk of prospective substantial raising of that figure to the American maximum when the opportunity comes on March 31, next, have not helped French sentiment toward the United States.

It was hardly to be expected, as treasury officials view it, that France would figuratively "sit idly by."

### Pauper Miners Return.

Seattle, Nov. 2.—The United States revenue cutter Bear arrived here today with 140 indigent miners and laborers brought down from Nome at government expense. The dry season on the Seward peninsula was largely responsible for the misfortunes of the miners, sluicing operations being at a standstill during the entire summer. One man, a cripple, was found to have a miner's "poke" containing \$700 hidden among his bandages. Another had confided to a sailor on the Bear that he had sent \$25,000 home from Alaska.

### Chief Orders Results.

Chicago, Nov. 2.—Following an order today from Chief of Police Steward that men wanted for holding bombs in the war between gambling syndicates in Chicago must be found, Captain Stephen Wood, head of the city detective bureau, told members of the department tonight that if they fail to get definite results in the investigation they should get out of the bureau.

Captain Wood even declared that should his department fail to run down the perpetrators of the prolonged series of crimes, he would resign.

### Some Classes Barred.

Chicago, Nov. 2.—Jury Commissioner William A. Amberg, testifying today before Judge Barnes in regard to the system of drawing jurors, admitted that a large part of the population of Chicago never had a chance to become jurors. Those whose names are never drawn include:

Laborers, tailors (if foreign), actors, saloonkeepers, bartenders, peddlers, junk dealers, scavengers, porters, cabdrivers, waiters, train dispatchers, railway tower men, theological, law and medical students, boiler-makers.

### Navigators of Air Combine.

Boston, Nov. 2.—The first association of international aeronautic pilots was organized here today. It marked the 119th anniversary of the first ascension of a man in a balloon from Boston. Memberships will comprise persons who hold balloon pilots' licenses, and the association is to be devoted to the encouragement of navigation. France leads with 114 aeronautic pilots. The United States and Great Britain have 35 each.

### Comet Observed at Kiel.

Cambridge, Mass., Nov. 2.—A cable has been received at Harvard observatory from Kiel, stating that Winnecke's comet was observed by Pooro of La Plata, Argentina, on October 31, about midnight, Greenwich time. It was then in right ascension 17 hours, 11 minutes and 51.6 seconds, declination 27 degrees, 13 minutes, 43 seconds. The comet is visible in a small telescope.

## FAVORS WARRANT PLAN.

Senator Carter Proposes Method to Obliviate Bond Issue.

Denver, Nov. 1.—United States Senator Thomas C. Carter, of Montana, chairman of the senate committee on irrigation and reclamation of arid lands, arrived in Denver this morning, several others of the committee arriving later in the day.

"There are projects now under way," said Senator Carter, "which call for the expenditure of between \$40,000,000 and \$50,000,000 for enterprises which ought to be rushed to completion immediately, in order to open up homes for the settlers and to provide for replenishing of the reclamation fund."

"It has been suggested that government bonds be issued to provide the capital necessary. My own idea is that warrants issued against the reclamation fund would serve the purpose equally well."

"There has already been expended on the Pathfinder system in Wyoming \$1,000,000, but until the distributing system is completed there will be no payments collected by the government."

"The Salt river project will require an expenditure of more than \$3,000,000. Up to this time \$2,000,000 has been expended and the dam which impounds 1,000,000 acre feet of water is just so much dead effort unless we go further immediately and place the water on the land."

### BUILD FREIGHT AIRSHIP.

Pioneer Aeronaut Believes He Has Problem Solved.

Los Angeles, Cal., Nov. 1.—After 60 years of activity in the field of construction Professor Thaddeus S. C. Lowe, of Pasadena, announces that he is about to complete the labor of his life and give to the world a practical freight-carrying airship.

"The day of experimenting has passed," said Professor Lowe today, "and I hope before long to be able to start the largest practical airship the world has ever seen on a trip to the Atlantic coast."

While the plans of the airship are as yet a guarded secret, the inventor has shown them to General Allen, chief of the United States signal service, and to the practical minds that have conceived and reviewed them they contain no flaws destined to prove fatal in the final test.

"If you will imagine that I had in my balloon car when I went up for reconnaissance with General McEllan the 100 or 150 horse power motor engines of 1909, you will see that I could have ended the Civil war in a week. I will be able to carry 20 tons on my experimental airship," he said.

### BLIND MAN READS MINDS.

Russian Studies Medicine Through His Sixth Sense.

Chicago, Nov. 1.—Blind from birth, but able through telepathy to take the different courses of medicine and surgery without study, is the remarkable condition of J. W. Bowlotin, a student in the Chicago College of Medicine and Surgery.

Bowlotin, a young Russian, asserts that through a sixth sense, which he cannot explain, he can read the minds of his friends and classmates, and in that manner acquire from them the knowledge they obtained through hard study.

H. Wolk, a roommate of the mysterious blind student, said yesterday that after completing his studies for an evening, Bowlotin, even though no conversation had passed between them, would be familiar with the subject which he (Wolk) had been reading. Bowlotin does not believe his power is anything supernatural nor anything beyond what any man could do if he would think hard.

"The whole thing is largely a thing of memory and sound reasoning," he said. "With Wolk here I get along nicely. We understand each other thoroughly."

"Is it true that Wolk reads minds to himself and you understand what he is reading?"

### Imports White Slaves.

San Francisco, Nov. 1.—Julius Toussaint, a local restaurant proprietor, was arrested today by Immigration Inspector Anton de la Torre on a charge of importing girls into the United States for immoral purposes. He is charged with having imported Henriette Perrin, a French woman, whom he met in London three years ago. According to the Federal immigration authorities in Washington, on whose complaint Toussaint was arrested, the accused man induced the girl to come to this country on promise of marriage.

### Fire Sweeps Black Hills.

Deadwood, S. D., Nov. 1.—No less than six forest fires are now burning in the Black Hills, and damage already done will run into hundreds of thousands of dollars. The most serious one, near Pactola, is still unchecked. The Deadwood office of the forest service has been notified of a fire burning north of Custer, another east of Hill City, one between Mystic and Merritt, and still another near Merritt. The Homestead mine force at Pactola has been recalled to save its timber reserves.

### Nine Lives Lost in Fire.

St. Johnsbury, Vt., Nov. 1.—When the ruins of the Citizens Savings Bank block were thoroughly searched today it was learned that nine lives had been lost in the fire which practically destroyed the principal buildings of this town early today. Two other persons were probably fatally burned. The property loss is estimated at \$50,000. Of the dead, two persons fell from the upper stories while seven were burned to death.

### Spain Suspends Cases.

Barcelona, Nov. 1.—Premier Moret telegraphed today to the authorities here to suspend the execution of all court martial cases until they could be examined by the government.

A Hen can hatch a duckling, why can't a bunch of any sort of feathers hatch a chick? As a matter of fact, they can, as has been demonstrated by the freese brooder invented by a California man. In general appearance the brooder resembles other machines of the kind, but there is no space in it for the lamp, or other heating apparatus used in the older types. Instead, a number of bunches of feathers are fastened to the under side of the

When the fertilizer is allowed to lie upon the surface for a period, exposed to the sun, much good is lost from the fact that it forms but a small amount of humus when plowed under. Therefore it is important that the soil should always be moist when fertilizer of any kind is plowed under.

In many ways humus benefits the soil. In the first place, it makes the soil lighter as well as looser. This condition allows good ventilation and gives a chance for poisonous gases to escape. The soil does not become over-heated, and in clay territory, the ground is lightened, making it more easy to work. It is equally beneficial in a sandy soil, inasmuch as it assists in binding it together, allowing more substance.

The time is near when farmers will be digging their potatoes, and then is the time to select the seed for another year; when a hill of nice, smooth potatoes is found, free from scab or rot, and a goodly number are just the shape and size wanted for table use, put them one side. At night gather them up and put them away for seed next spring. You will be surprised to see how you can change the type and improve them in a few years, says a Vermont contributor to the American Cultivator. We do this every year, and while our townspeople are complaining of their potatoes running out and buying of us to renew their seed, we are planting potatoes (Green Mountains) that started from the seed that was bought for \$5 a bushel when they first came around. If farmers would take as much pains in selecting their seed potatoes as they do their seed corn, we would not hear so much complaint about potatoes running out.

Some farmers think that a strawrick is a good place for the sow and her brood to sleep. This is a mistake. It is best to keep them away from the straw pile winter and summer. In the winter the pigs will burrow beneath the straw, get too warm and take cold when they come out into the freezing atmosphere. Coughing and wheezing is the result, and the pigs do no good or die. Besides, if burrowed beneath the straw they are liable to be stepped on and seriously injured or killed by the stock running to the rack.

During the summer months especially should the sow and her young be fenced from the straw pile. If they burrow down into the half rotted straw they will be very apt to contract some disease.

Rye as Horse Feed.

Rye is a good grain to feed horses. It is equal to oats and wheat, but it must be ground middling fine and mixed with cut straw or cut hay. The straw or hay should be cut into half-inch lengths, moistened with water and the rye meal mixed with it. It is very sticky and horses cannot get the meal without eating the straw or hay with it. In feeding corn to horses we always grind half rye with the corn to make the corn meal stick to the cut straw. Corn and rye ground together in equal proportions and mixed with bright cut straw moistened with water make a well-balanced ration, equally as good, as eagerly sought after by horses and a cheaper horse feed than oats and hay.

Poultry Notes.

Others have built up an egg laying strain. Why not do so yourself? Lazy hens cause much of the high prices for eggs. Make 'em get busy and hustle.

The warmer the weather the more water required, as more is thrown off by the body.

Many a hen that is otherwise well fed may fall to lay on account of lack of water.

Successful poultrymen, in order to keep their poultry on a paying basis, are continually culling their flocks.

One of the great values of green food, it is said, lies in its ability to aid in the digestion of other things.—Farm and Ranch.

Feeding Stalks to Hogs.

When the green stalks are given to hogs care should be taken to prevent cattle from having access to the woody fiber which the swine will leave after chewing the stalks. Pigs relish chewing the stalk for the greenness in it, but leave enough saccharine matter in the fiber to make it attractive to cattle, especially the younger stock. This fiber is indigestible, and the cattle, if allowed to pick it up, will frequently eat a sufficient quantity to cause impaction and harmful if not fatal results. It is not safe to let the cattle into yards where swine are given green corn stalks.—Columb's "Swine in America."

Grades of Cream.

The Kansas Agricultural College grades cream as follows: First grade cream, 20 or more per cent of butter fat; second grade, 25 per cent and less than 30; third grade, having less than 25 per cent butter fat. Creameries like to get high-testing cream, say 30 and above. They make more butter from this, as the overrun is greater.

Dr. W. D. Hunter, the government entomologist in charge of the Southern field crop, declares, in a bulletin issued at Dallas, that the recent period of oppressive heat in Texas played havoc with that hitherto invincible enemy of the planter, the boll weevil. Ninety-nine per cent of the cotton plant parasites, he says, are dead. The heat not only dealt death among the boll weevil, but at the same time forced a process of incubation in the cotton bolls. The result will be a crop that may be harvested earlier than usual.

Movable Schools.

The United States Department of Agriculture recommends the establishment of movable schools of agriculture by the state experiment stations. Where fifteen farmers can be secured as students the school may be conducted for a year or longer. The kind of instruction will depend upon the needs of the section.

Angora goats are doing good work among the mountains of California, where they are cutting trails for fire guards through the brushy areas. The herd of 3,000 is divided into two bands, which are grazed within well-defined areas. They attack the heavy bushes, stripping off the bark and killing all wild growth. There is plenty of the same kind of work to be done in the East, but only small beginnings have been made. Perhaps an object lesson is needed in the shape of a large tract of rough land to be cleared and improved with the aid of the goats.

Benefits of Humus.

The substance left in the ground after the fertilizer has decayed is known as "humus." In order to secure the greatest results from the fertilizer and to get the largest possible quantity of humus, it is necessary that the soil be moist when the fertilizer is plowed under. Only a small amount of humus is obtained from the turned-over fertilizer should the ground be dry.

When the fertilizer is allowed to lie upon the surface for a period, exposed to the sun, much good is lost from the fact that it forms but a small amount of humus when plowed under. Therefore it is important that the soil should always be moist when fertilizer of any kind is plowed under.

In many ways humus benefits the soil. In the first place, it makes the soil lighter as well as looser. This condition allows good ventilation and gives a chance for poisonous gases to escape. The soil does not become over-heated, and in clay territory, the ground is lightened, making it more easy to work. It is equally beneficial in a sandy soil, inasmuch as it assists in binding it together, allowing more substance.

Perhaps an object lesson is needed in the shape of a large tract of rough land to be cleared and improved with the aid of the goats.

Wellesley Oak 500 Years Old.

A wide-spreading oak which experts have declared must have been growing at the time of the discovery of America by Columbus, is a landmark on the estate of the late Arthur Hunnewell in Wellesley, Mass.

The magnificent tree measures 26 feet in circumference at the base. It is a noticeable landmark on account of its unusual size. It intersects the fence which separates the fertile fields of the Hunnewell estate from the highway, and thus arrests the attention of the passerby.

The late Mr. Hunnewell took great pride in the ancient tree. It has withstood the ravages of pests for a great many years and is apparently in condition to live for a great many more decades. The late Mr. Hunnewell once had the tree examined by an expert from the Smithsonian Institute, who declared that it was between 400 and 500 years old.

Eliot, the apostle to the Indians, frequently passed the towering oak while going to and from South Natick, where he preached to the Indians, the tree being beside what was the old trail.

Rheumatism, Neuralgia and Sore Throat will not live under the same roof with Hamlin's Wizard Oil, the best of all remedies for the relief of all pain.

Honors About Even.

Hostess—Miss Somers, let me present Mr. Winter.

Mr. Winter—Charmed to meet you, Miss Somers. You ought, however, to regard me as an old acquaintance. You have seen perhaps seventeen or eighteen of me.

Miss Somers—Indeed, Mr. Winter, I am the one that should be regarded as the old acquaintance. You have seen not less than forty of me.—Chicago Tribune.

If It's Your Eye Use Pettit's Eye Salve for inflammation, styes, itching lids, eye aches, defects of vision and sensitive to strong lights. All druggists or Howard Bros.

On the Safe Side.

First Cat—Why, Tom, you are stinging out of range.

Second Cat—Out of range of that man in the window yonder—yes.—Montgomery Advertiser.

Tired of the Game.

"Billingsley tells me he has moved his gasoline tank into his garage."

"But that's awfully dangerous, isn't it? The garage may catch fire at any moment."

"That's what Billingsley hopes!"—Cleveland Plain Dealer.

Only a Void.

Bertie—Here's another great chess playah whose brain has gone wrong. I am glad I never took up the deuced game.

Jane—But in your case, Bertie, I'm quite sure there would be nothing to go wrong.—Cleveland Plain Dealer.

Caution.

Caller—I would like to see something in the way of a check.

Tailor—Er—yes—excuse me—are you a customer or a bill collector?—Boston Transcript.

DYSPEPSIA
