THE CUTTER LABORATORY, Barkeley, Californ

Real "One-Hoss Shay."

The original "one-hoss shay" is now at the Berkshire museum of natural history and art. This shay was fea-tured in a poem. The old chalse was presented to the museum by Francis W. Rockwell, who owned it for many years. It was formerly owned by the late Amasa Rice of Pittsfield and his son, Robert A. Rice, has told Mr. Rockwell of Oliver Wendell Holmes' frequent visits to examine the old chaise during his residence in Pitts field, 1848-1865, and it is believed that this is how Mr. Holmes gained his in spiration for his famous poem, "The One-Hoss Shay." Mr. Rockwell writes that this chaise is over 100 years old. It was formerly the property of Sam-uel McKay, one of Pittsfield's first citizens in his day, 1793-1834. In the

inventory of his estate one item was "One gig and harness, \$130." Mr. McKay was interested in other forms of transit, for record shows that "S. M. McKay, Lemuel Pomeroy and T. A. Gould were incorporated with a capital of \$240,000 as the Pittsfield & West Stockbridge Railroad company." Mr. McKay gained the title 'colonel" as one of the governor's military aides.—Pittsfield (Mass.) Cor-respondence, Springfield Republican.

The Paper Strategists.

While the war lasts mathematical warriors will balance corps against corps and ship against ship in the newspaper columns, but in a real war all the paper strategy counts for nothing. That poor little Prussia, in 1756 could not possibly make head against Austria, France, Russia, Sweden and Saxony was as demonstrable on pape as that two and two make four. Buthe Seven Years' war was decided by a factor quite outside the range of mathematics—namely, by Frederick with a vial of corrosive sublimate in his pocket, and in his heart a black determination to fight while he had a regiment left, and then commit suicide. Revolutionary France had no show on paper, but in fact overran all grams laid down for it in advance. If the Spanish army in Cuba had been capably led and really determined to fight the ending would have been the same, but the story would have been different. If war could be determined on paper there would be no war, for a nation fights only when it has some hope of winning.-Saturday Evening

Germany's Invisible Aeropiane. An invisible aeroplane that may play no inconsiderable part in the Euro-pean war was invented by a German engineer and demonstrated shortly before the great conflict opened. In stead of having cloth fabric or other visible material used for covering the planes this aeroplane is constructed of a sort of transparent celluloid that is also fireproof. These celluloid wings let the light through, leaving only the light framework of the machine apparent, and when at a height of 3000 feet it is practicably impossi-ble to detect the aeroplane at all. The machine is fitted with a silent motor, which is also valuable in enabling an airman scouting over an enemy's position to escape detection. A further advantage is that the aviator's view is not cut off by the planes,—American Box.
