### DAIRY WISDOM.

If you separate the calf from its mother on the third day, give it the mother's warm milk.

When a man begins to test his cows he always feeds better; for then, if not before, he will begin to realize the great importance of the right kind of feed.

Take the chill off the water for the fresh cow for a week or ten days.

Whatever breed of cows you keep, strive to keep the best of that breed.

A good thrifty cow will consume about twenty pounds of hay daily when it constitutes the entire roughage.

The dairy farmer who has a good well and adequate pumping facilities has a modest refrigerating plant of his own.
