Raw Food Must Be Washed.
"Gritting of sand between the teeth while eating vegetables raw is a certain sign that they have been cleaned improperly, if at all," says the New York Medical Journal and adds that because of improper washing it is often not safe to eat raw vegetables, salads or fruits.

THE ROAD TO SUCCESS.

Fill Whatever Job You Hold to the Best of Your Ability.
"In climbing the ladder of success what have you learned that you could pass on as aid to other struggling young men?" I asked H. P. Davison of J. P. Morgan & Co. "Did you conceive any shining goal and bend everything to getting there?"
"No," he replied emphatically. "Whatever job I had was to me always the very best job in the world, and I tried to fill it. I made no elaborate plans for the future. If I had any system in my labor it was first to do my own work; second, to teach the fellow below me how to take my place; third, to learn how to fill the position ahead of me."
"Boys and young men should not imagine that their work is so unimportant that nobody takes note of how they do it. It does not take long to find out whether a boy is on his toes watching how he can best be of help in a situation or whether he merely sits down and waits to be told what to do. The simple virtues of willingness, readiness, alertness and courtesy will carry a boy farther than mere smartness."
"Perhaps it will not be out of place for me to describe an incident which may carry a lesson for the young men you are anxious to help. One day when I was teller a customer offered me a very fine gold pen. I went right into the office and asked if this man had any loan from the bank. I explained that he had asked me to accept the gift. The bank promptly acted, and it was not long before the fellow was in bankruptcy. The simple course I took saved the bank a good deal of money."—B. C. Forbes in Leslie's.

The Larch in Labrador.
The soil and atmosphere are so cold and dry in Labrador that scarcely any vegetation thrives at all. The larch is a species of pine tree which is found in all northern countries, but its growth is so stunted in Labrador that a specimen found on the most southern part of that dreary land was but nine inches in height and the trunk was but three-eighths of inch in diameter. A careful examination of the miniature tree revealed its age to be at least thirty-two years, for there were that number of ring growths shown in its small trunk. The very cold currents pouring down from the north and the fact that Labrador has less sunshine than Alaska, together with several inland climatic conditions, make the summer seasons shorter and colder than are those of Alaska.—Exchange.
