Fern Stagers

The Extention News of the Oregon Agricultural College this week contains an article which should be of interest to every farmer in this community.

This article is headed "Fern Poisoning or Fern Staggers" and deals with the latest investigation of that disease among horses and other livestock, so prevalent during the rainy months in fern infested districts.

This community has each year suffered a heavy loss in horses from this, hitherto, more or less undiagnosed disease and the reading of this article by the local livestock owners, may mean the saving of many animals this winter.

One copy of this article is now on file at the News office, but others may be had by writing to the O. A. C. Extention Dept., or this office will try to supply them.
