When Stuck in the Mud

Here is one method suggested by the United States Fire Company: Put the car in low, and if you cannot feed the gas with your foot evenly, so that the wheels will revolve slowly, put your emergency brake on. Do not put it on so that the wheels

will not revolve at all, but tightly enough to keep them from revolving rapidly. With the wheels turning slowly, the maximum pull is delivered to them by having the car in low gear, and so long as they turn slowly they can get the benefit of the tremendous power.
