

# AUTO LIVERY GARAGE

S. P. PESZNECKER, Propr.  
SAFTY FIRST.

If you need Auto service, call me up at any time. I will go anywhere and give good service for a reasonable price. Also light trucking.

I also do Plumbing, Tinning and Electric Wiring, Repairing and supplies of all kinds in the metal branch.

Agent for Mazda Lamps, Pumps and Fittings.

## ROOSEVELT MEMORIAL FUND

To the Roosevelt Memorial Association,

M. D. Latourette, County Chairman,  
Oregon City, Oregon.

I herewith subscribe the sum of.....  
to the ROOSEVELT MEMORIAL FUND.

Name .....

Address .....

The above amount is inclosed herewith.

According to the plans of the Roosevelt Memorial Association, the Roosevelt Memorial Fund of \$5,000,000.00 is to be utilized to erect a National Monument in Washington, D. C.; to acquire and maintain a public park at Oyster Bay, N. Y., and ultimately to include Sagamore Hill, the Roosevelt home, therein, to be preserved like Mount Vernon and Lincoln's home at Springfield; and to endow a National Society to perpetuate the principles and ideals of Theodore Roosevelt.

Each contributor to the fund will receive a certificate of membership in the Roosevelt Memorial Association. A certificate will also be presented to every school contributing to the fund.

The name of every contributor will be placed on the list of names deposited in the National Monument to be erected at Washington, D. C.

## MODERN POULTRY CULTURE

By PHIL. MARQUAM

### Experiment Stations: Past and Present.

The Benedictine monks conducted the first experiment stations. It is true that in those bygone times their farming enterprises were not called "experiment stations", yet that is in fact what they were. The Benedictines were the first "scientific" farmers. The rules of St. Benedict which assigned a certain time each day for reading, study and meditation, did not overlook the useful art of farming. Accordingly, a certain time each day was spent by the Benedictines in taking care of the poultry, growing a garden or reclaiming marshy swamps and turning them into fruitful fields. Into this work they en-

tered with an active interest and with inquiring minds. Led on by the spirit of investigation they sought to make each succeeding crop better than the preceding one. Their aim was to profit by past experience. Unfortunately, in those bygone times there was little real scientific farming experience to profit by. Today some branches of scientific farming are just in their infancy. It is therefore quite obvious that in ages long past the sum total of all farming experience was quite meager and indefinite. The spirit of investigation, however, lived on, and with each passing age added a little to the scientific knowledge of farming, but the progress was very slow and the accomplishment not always promising.

It is only in our own day that every branch of farming may, in fact, be placed upon a scientific basis. The chief factors in accomplishing this result are the experiment stations. For them the modern farmer should feel an unbounded gratitude. They

have indeed given him the formulas for success. All he has to do is to profit by them. If a person follows unapproved methods and fails he need blame no one but himself. The modern experiment stations, however, like the bygone monks, can do no more than by their teaching and by example. Obviously they can not run our farms for us. And so it is up to each farmer to make the most of the lesson.

To the poultrymen, these stations have given the balanced ration the open front house, and better principles of breeding. And it has taken all three of these essentials to place the poultry business on a paying basis.

And so when any one contemplates going into this line of work he would do well to get in touch with the experiment stations, and learn what they are doing. The men who conduct these stations have devoted their lives to the study of farm problems. If they do not know the answers to one's poultry problems, no one else does. The work of these stations, especially our own, under the able direction of Prof. James Dryden, at Corvallis, Oregon, is of a thoroughly practical nature, and hence the things they teach are always of value to the farmer.

A person going into this business would do well to get the bulletins dealing with poultry and learn a little of the theory of poultry farming before he begins to "keep poultry". Then when he starts in the business he will know what to do and how to do it. But if a person rejects the best teachings of the experiment stations, and relies upon his own "ideas", when in fact he has no worth while ideas to rely upon, he is headed for failure. On the other hand, if a person goes into this business in a small way, after having studied out slowly, and is patient and consistent the essentials of the work, grows in his work, sooner or later he will meet with a full measure of success.

Miss Marie Fall of Portland, is in town selling a series of volumes entitled "The Young Folks Treasury" and "The Mother's Book." The last named contains very valuable information to mothers in respect to the training of their children, and the remaining volumes are designed for the children to read and thus have their minds trained and knowledge imparted to them in a very interesting manner.

### Want and For Sale Column 5 cents per line. Cash in advance
