

U. S. MORGAN

D. H. MORGAN

THIS SPACE BELONGS TO

We have just received two truck loads of alfalfa hay, and one of cheat is expected immediately. These won't last long, so don't delay for it will be first come, first served.

We have sold our store at Viola to William Mattoon, who has our best wishes for his success, and whom we cordially commend to the good people of that vicinity.

MORGAN BROTHERS

(Successors to the Estacada Feed Co.)

We wish to announce

the arrival in town of the first

BEEMAN TRACTOR

This is a small machine calculated to do your cultivating and small jobs of plowing. It is especially adapted for the man with a few acres, or the man that has a regular farm tractor. It will take the place of one horse, in the truck or berry field.

We will announce a demonstration as soon as weather conditions will permit.

REED & SHIBLEY

"It Will Surprise You"

says the Good Judge

When you learn how long a little of the Real Tobacco Chew lasts.

How long it holds its rich tobacco taste.

The real satisfaction.

The money saved.

Any man who uses the Real Tobacco Chew will tell you that.

Put Up In Two Styles

RIGHT CUT is a short-cut tobacco

W-B CUT is a long fine-cut tobacco

Weyman-Bruton Company, 1107 1/2 Broadway, New York City

Owners of Electrically Equipped Automobiles Take Heed!!!

The storage battery which was first used for starting and lighting purposes in 1912 is an exceedingly important part of the equipment of the modern automobile, writes Vern Duus, batteryman for the Cascade Garage.

Few people who have not made a special study of the mechanics of their car realize that it is the heart of the entire system, without it there would be no electric light and horn and the engine would have to be cranked by hand.

Many car owners are of the impression that a battery stores up the electricity actually used in charging it. This, however, is an error, as the energy produced by the battery is created by certain electro chemical action within the battery itself.

This electro chemical action decomposes the water, which is part of the solution of the battery in the form of hydrogen and oxygen gas. The other part of the solution being sulphuric acid, is absorbed by the plates during the chemical action which is produced by the discharge.

This water should be replaced with pure distilled water at least every two weeks and the battery should be tested for specific gravity and voltage at least once every month. If one cell shows a specific gravity decidedly lower than that of the other cells and if the difference continues to increase the cell with the lower gravity has internal trouble which probably consisted of a short circuit between the plates caused by broken down insulation.

If the entire battery shows a gravity below 1.200 it is not receiving enough charge to replace the energy used to crank the engine and should be charged from an outside source.

The Cascade Garage operates a complete and up-to-date battery service station and repair shop, and will give free battery inspection to all owners of electrically equipped automobiles.
