THE ETERNAL GOD is thy refuge, and underneath are the everlasting arms.—Deuteronomy 33: 27

BEASTLY BUG BITES

(Written for the Oregon Tuberculosis Association by Dr. B. S. Herben of New York.)

This is the time of the year when all the tribes of backbiting insects swarm around to take their little meal of red fluid and leave their lump-of-itch in the place of extraction.

We are concerned mostly over the fact that we cannot get to sleep, or that the itching spots are driving us mad, or that our faces present the aspect of a measles case. But there are other reasons why such a case should engage serious consideration. One is that insects may carry disease; the other is that the bites may give rise to serious infections because they are scratched.

Mosquitos may carry malaria, and though this is not so common a disease now-a-days, mild cases occasionally occur and may be mentioned in passing. In malaria the mosquito acts as the "middleman" for he takes into his body the parasites of malaria and then gives it to the human blood stream during the process of biting. In the human blood, the parasite develops and in the course of its growth causes the characteristic symptoms, "fever and ague".

In the southern half of our side of the hemisphere, the mosquito carries the germ of yellow fever, and the story of how medical research workers gave themselves to the discovery of the mode of transmission of this fatal disease and so enabled their co-workers to wipe out the wide spread cause of death, is a dramatic one.

Bedbugs, lice of pediculi also carry disease no doubt. But these insects, together with our common mosquito, are dangerous particularly because they cause the itching which invites scratching. Scratching with the always germ-harboring finger nails has more than once caused the loss of life by engendering blood poisoning.

As Woods Hutchinson describes it you often carry "death under the finger nail." I once saw a child who had scratched a bite on the skin and had terrible trouble with an infected knee as a result.

The thing to do, therefore, is to stop the itching at once, when there has been an insect bite. To do this bathe the locality with a two per cent solution of menthol of camphor, or cover it thickly with bakink soda sufficiently dampened to stay where it is placed.

CHEVROLET SHOWS BIG GAIN IN PRODUCTION

Detroit, Mich., JULY 17.—THE Chevrolet Motor Company having established successive production records for April, May and June, will exceed by August 20 the total production for the entire year of 1924, it is announced by R. H. Grant, general sales manager.

Chevrolet production during 1924 was 305,303. During the first six months of 1925 the total production reached 246,081 or only 59,222 under the aggregate for the preceding year.

The company produced 54,944 motor cars and trucks during June, exceeding any previous June in its history. The total for the month was exceeded by only one month of Chevrolet production, October, 1923. Sales to dealers during June were 54,725. At the end of June there still remained 24,654 unfilled retail orders in the hands of dealers.

"I stated recently that the motor car industry was becoming stabilized; that the undesirable peaks and depressions of production were being flattened out," said Mr. Grant. "This statement is substantiated by the Chevrolet production figures for the last three months.

"In April we produced 52,236 cars and trucks; in May 52,853 and in June 54,944. Thus we have only a variation of only 2,708 units between the lowest and highest of the three months. And of even

greater significance is the fact that our production crept up instead of downstead of down during a period in which past experience has led manufacturers to expect a decided decrease.

"Another significant figure is contained in the statement of the National Automobile Chamber of Commerce that the May 1925 Chevrolet sales were 233.6 per cent of the May 1924 sales and that the truck sales for the same months were 297.6 per cent of those for May, 1924."—From Chevrolet Motor Company.

FARM REMINDERS

O. A. C. Department Industrial Journalism.

Common vetch and gray winter oats have been used in the O. A. C. station trials for dairy cattle silage as recommended for Oregon in general. Purple vetch for the coast district shows a little more promise, and the new station product, Hungarian vetch, is recommended for the very heavy lands of the valley district.

Lead arsenate may be combined with bordeaux mixture, nicotine sulfate, cold preparation oil emulsions, and either self-boiled lime-sulfur, Oregon cold mix, or dry mix lime and sulfur. When combined with liquid lime-sulfur, the latter is first diluted to spraying strength and one pound of hydrated lime or caseinate spreader added. Just before application the lead arsenate is sifted in. When two or three classes of plant troubles—eating insects, sucking insects, and fungous diseases—are present at the same time, the growers can save time and labor by combining their sprays and controlling enemies with a single application

Increasing demand for canned goods and other horticultural products give ground for belief that

the Oregon cane fruit industry will continue to hold its own and undergo some slight expansion. Future plantings should be limited by present and prospective market conditions, says the experiment station, as potential production is far in excess of present market requirements. Western growers will profit by recognizing that producers are largely servants of consumers and must produce only to the extent consumers can be induced to buy. Vigorous demand for any cane fruit does not mean that the demand is the unlimited and justifies unlimited plantings.

Core break-down of Oregon pears can be controlled by picking at the proper time. This can be done without sacrifice of either tonnage or quality of the pears, reports the experiment station.

Hard to Get French to Leave Homeland

Vigorous attempts continue to be made by the colonial ministry to encourage French emigration to the colonies. But in spite of colonial exhibitions and a deluge of literature and motion pictures descriptive of life in those parts of the world where France has territorial possessions, few French people have been induced to leave their beloved homeland. The attachment of the French to their soil is, indeed, well known. They prefer making a mediocre living in their own country to prospects of wealth abroad. And not only is the average Frenchman loath to leave his country, but seldom does he abandon his native town or village. There are peasants whose families have been on the same farms or in the same districts for hundreds of years. A French writer has started investigating how long certain peasant families have been in the same place and has found some interesting examples. Thus in the village of Jeannet, in Burgundy, a farmer named Saclier has authentic records showing that the first Saclier began to till the soil of the farm in 1672 and it has been in his family ever since.

Skis Used by Swedes Since Sixth Century

In Sweden ski running is at least fourteen centuries old, and probably dates back to prehistoric times, according to Prof. Otto von Friesen, of the University of Upsala. A runestone at Boeksta, not far from Upsala, shows a picture of a ski runner, and it is probable that long before they knew how to write runes the Swedes learned the art of skiing from the nomadic Lapps and Finns. Professor Friesen says that in the Sixth century southern European writers described hunters in Sweden who were able to glide through the forest at high speed. The runestone, which dates from the middle of the Eleventh century, proves that ski running was then common in Sweden.

In the Viking age skis were in frequent use. Winter sports had a special divinity, Ull, who was himself devoted to the use of skis. Outwardly he was the symbol of the bright, sunny winter day that stimulates to outdoor life and warlike games. Roads being rare, the skis furnished means of communication, no matter how severe the winter, and speed on them was highly esteemed.

Ancient French Title

The title "dauphin" was borne by the heirs-apparent to the crown of France, under the Valois and Bourbon dynasties. In 1340, Humbert II, the last of the princes of Dauphine, having no issue, left his domains to Phillip of Valois, king of France, on condition that the king's eldest son be called the dauphin.

The first dauphin was Jean, afterwards John the Good, and the last the Duc d'Angouleme, son of Charles X, who renounced the title in 1830. It is said that Guy VIII, an ancestor of Humbert II, was surnamed Le Dauphin, because he wore a dolphin as an emblem on his helmet or shield. This surname remained to his descendants, who were styled Dauphins, and the country they governed was called Dauphine. The wife of the dauphin was called the dauphine.—Kansas City Star.

Laugh

The silverware salesman gave a laugh.

"Do you see that dame with the diamond stomacher?" he said. "Well, she must be one of them new-rich millionaires."

"Yes? Why so?"

"She's been buying sugar tongs—solid silver, you know. She chose our most expensive tong, and then she said:

"I'll take a dozen."

"A dozen? I said, surprised.

"Yes; one for each person," says she.

"Then she kind of reddened. She misunderstood my surprise.

"I never give big parties," she says. "A dozen'll be quite enough, young man."

OBITUARY

Van Woodard, age 30 years, died Thursday, July 23, 1925, at the Veterans' hospital following an illness of many months duration. He was removed to the hospital a few weeks ago thru the efforts of the Carl Douglass Post.

The funeral was held Saturday, July 25 at 2:30 P. M., from the Mt. Zion church and he was accorded full military honors by the members of the Carl Douglass Post of the American Legion. Rev. B. F. Clay assisted in the services. Interment was made in Mt. Zion cemetery under the direction of J. E. Gates.

The deceased was a World War veteran and is survived by his mother, Mrs. Dora Hirt and other relatives.

NOTICE OF SALE.

On Monday, August 10, 1925, at 10 A. M. at the office of the Estacada Telephone and Telegraph Company in Estacada, Oregon, 17 shares of the Estacada Telephone and Telegraph Company will be sold to pay former assessments made on said shares.
