## COLTON-ESTACADA ROAD TO BE SCENIC

It was the writer's good fortune to walk over the route of the Molalla-Colton-Estacada road the other day. We had frequently driven over the different roads in that section. Every road was rough and had steep grades. While anxious to have the road from the Estacada and Springwater country connected with the valley, we were entirely unprepared for finding such an excellent grade as has been found.

Four per cent will be the steepest grade. Besides the excellent grade the road will follow along Dorn creek in such a way as to make a most delightful drive. It will be as beautiful as the famous Zig Zag on the Mt. Hood Loop.

There will be no expensive construction difficulties to be met. It will not be a costly road to connect. It will be a road to attract tourists as making one of the most delightful loop drives out of Oregon City or Portland. There will be many different loops connecting with this road. The Mt. Hood Loop can be taken on either side of the mountain. The loop can be shortened by returning by way of Springwater, Estacada or Gresham. Either of these would make an excellent drive. It will open the eastern end of Clackamas county to a short cut south to Salem or any southern point. It opens a short route to eastern Oregon from the south by way of Wapinitia.

With the completion of the Oregon City-Molalla-Silverton road and the road west of Molalla to the Pacific highway at Hubbard, this new road will connect eastern Clackamas county and central Oregon with the Tillamook beaches and all southern points of the state.

Without question this small road enterprise opens more territory and will do more for the development of Clackamas county than the same amount of money spent or mileage of road constructed in the history of the county's road building. It will be one of the county's most popular drives.

The spirit of the market road construction is not violated in building of this road because it is primarily a farmer's road. It will make possible the development of a vast farming and fruit growing section which is held back, and in many cases deserted, because of not having a road outlet. The importance of this road calls for all speed possible in its construction.—Molalla Pioneer.
