YOUR SOCIAL SECURITY

By James Piazza
 Q: Why doesn't social security pay a benefit big enough to provide for just the necessities? I can scrape by on my benefits, but I have to count the pennies very carefully.

A: I could use a lot of space in answering that question fully, because it involves so many things. Briefly, the entire system was established and has grown on the premise that benefits will only partially replace earnings lost by reason of retirement, disability or death. Social Security does not attempt to provide complete financial security by itself; that is the responsibility of the individual.

and a number of our great American institutions, of which social security is but one - all attacking the problem of financial insecurity in a different way.

Q: I'm over retirement age but I haven't quit farming nor do I want to. However, I don't see why I have to keep on paying social security taxes when I'm not getting anything in return.

A: You are getting something in return. You're continuing to get protection against the time when you or your family may suffer a loss of earnings because of old age, death, or disability. For working people between retirement age and age 72, social security can be considered as an underpinning of income. Consider it as a resource to be drawn on for low income years or periods of inactivity. Farmers, particularly should view it that way. You may have a bad year with small or no earnings. You could get old age payments to offset that loss, partially or wholly. Moreover they may be parts of every year in which you are not actively farming. You can get social security payments for those periods regardless of how much you earn in the farming season.

Q: What do the letters F.I.C.A. that appear on my W-2 Statement of Earnings each year stand for?

A: They stand for Federal Insurance Contributions Act, which is the authority by which the Internal Revenue Service collects the required social security contributions from covered employers and employees.

... every action admits of being outdone. Our life is an apprenticeship to the truth that around every circle another can be drawn; that there is no end in nature, but every end is a beginning; that there is always another dawn risen on mid-noon, and under every deep a lower deep opens . . . This fact, as far as it symbolizes the moral fact of the Unattainable, the flying Perfect, around which the hands of man can never meet, at once the inspirer and the condemner of every success, may conveniently serve us to connect many illustrations of human power in every department.
