#### "It is an Ill Wind That Blows Nobody Good."

That small ache or pain or queakness is the "ill wind" that directs your affection to the necessity of purifying your blood by taking Hood's Sarsaparilla. Then your whole body receives good, for the purified blood goes tingling to every organ. It is the remedy for all ages and both sexes.

### Hood's Sarsaparilla Never Disappoints

IMPROVED TOURIST SLEEPERS. Sailroads Are Acceding to Demands of

Middle Classes Who Want Better Steeping Car Service. In response to the demand of the times the O. R. & N. and its connections are placing in operation a much better grade of tourist sleepers for Pacific coast service than at any provious time. The largely increased traffic to this section of the country has demanded all the improvements of latter-

lay transportation, and in considers tion of tihe the railroads are establishing a service which is excellent in every particular. Not only are the wishes of the first-class passengers served, but those who are traveling to and from the East on second-class tickets are splendidly cared for. There are was a time when a tourist sleeper appealed to a limited number of people who were traveling on the "chesp" order, in every meaning of the term. Now, however, there has been a radical change. With the better tourist sleepers in operation the class of passengers has been improved, and one may now travel upon them; and enjoy all the privileges of a first-class sleeper at a greatly reduced rate.

Daily, on the O. R. & N. Eastbound fast mail, Is attached one of these latest improved tourist sleepers, a model of beauty and handsome appointments. The new cars are almost an exact counterpart of the first-class sleepers.

One noticeable feature of the new tourist cars, is the absence of a smoking apartment. The new cars being built by the Pullman Company are not porvided with smoking spartments. This new departure has been taken because of the fact that most through trains are provided with composite cars, which provide a smoker for the alceping-car passengers.

Kit Carson's rifle, which was carried in the possession of the Montezuma lodge of Masons, at Santa Fe, of which lodge Kit was a member.

MARINE RAILWAY NEAR NEW YORK IS UNIQUE.

It is Only One buil Mi'e in Length, but It How a Monopoly of a Good Business and Earnan Great Deal of Money.

The death of Mr. Vanderbilt brought

back to my memory recollections of Austlu Corbin. My attention was recently called to the least known enterprise which the late Mr. Corbin found ed, and which, according to one source is the richest railroad in the world. The road is within half an hour's ride from New York and is known as the Marine italiroud. The entire distance covered by this road is barely a quarter of a mile, and the fare is the uniform and small rate of 5 cents. The road serves to connect the two summer resorts Manhattan Beach and Brighton Beach. The trip over the road occupies only a been an absolute monopoly of traffic, of land. This strip Mr. Corbin, wise issued orders that any one who wanted to walk alongside the roadbed was taking chances of arrest for trespass, and On one side of this strip is the ocean, on the other swamps and marshes. To circle around these swamps in order to reach the opposite beach would require | shouted; a walk of at least three miles, hence the profit accruing from the Marine Railroad The road operates only three months a year, but during these three months it carries on an average 50,000 or 60,000 passengers a week. Last Fourth of July the two engines and two coaches carried 28,000 persons at 5 cents, and no baif fares for children either. The stuff is in keeping with the extent of rolling stock. It consists of two engineers, two firemen, two conductors, two ticket sellers and two gates men. The superintendent of Manhattan Beach is at the same time general manager of the Marine Hallroad, its generat passenger agent and freight agent all in one person, It is said that the by him for more than 40 years, is now operating expenses for the three orths of the senson do not exceed \$3,000. In 1891 the road is said to have cleared \$57,000 above all expenses. Its cupital is \$20,000, and, according to one of its stockholders, it has cleared upwards of \$1,000,000 for the shareholders during its existence, a dividend of 250 per cent, per annum. The hundreddollar shares are therefore worth in the neighborhood of \$5,000, a higher premtum than that commanded by Chemican Bank stock, which is usually considered to be the most remarkable investment in that respect. That the shall as the staff of the road can be easily imagined, and that none of the stock is for sale is also self-understood In one respect the miniature railway resembles the ministure states of An-

#### CLIMATE SHOWS FEW CHANGES.

Weather Conditions Now About the Same as in Ages Past. This subject is of extreme interest ship contest, by which Saeller wins the and merits a most thorough study. We case by 60 plurality, an increase of 40 find the "early" and the "latter" rain to-day in l'alestine precisely as described 3,500 years ago. "Jordan overflows all its banks" in February to-day exactly as it did in Joshua's time. thirty-three centuries ago. Plants taken from mummy cases in Egypt, which must have been gathered more than 5,000 years since, are practically of the same size and have the same ap pearance as those growing to-day. Records of vintages in France over 700 years show practically the same dates as today. Actual observations of rainfall for over 200 years in France show no change. Observations of temperature for almost 200 years at St. Petersburg show no change appreciable to us, though, of course, the earliest observations were extremely crude and some what unrellable. Facts of this kind might be adduced to fill a small volime. On the other hand, we have records of most extraordinary cold weather in ancient times. One winter the light wine in France froze. Another winter the River Po froze over so as to bear teams, an unheard-of phenomenon to-day. In this journal The shifting sands continually enrecently it is stated that "Parnassus and Socrate, now free from snow, were covered with it in classic antiquity." Also "the name of Greenland, which strikes us as so singularly inappropriate, was not inapplicable at the time it was named, in the fourteenth century." It is entirely probable that descriptions of the cold in ancient times were much exaggerated. Parnassus and

Socrate have snow at times, and, in earlier days, when protection against the cold and snow was much less than now, a little snow would go a long way. The earlier voyagers fro a Iceland, more than 1,000 years ago, leaving a land of almost perpetual ice and snow, and reaching a land in the summer with its beautiful green color to their unaccustoned eyes, would very naturally give the name of Greenland to it. At the summer time, it is said that Greenland presents a most beautiful green near the Danish settlements to this day. Our oldest inhabitants, who have been wont to describe the terrible cold and deep snows of their boyhood days as incomparably greater than anything which does or can occur to-day, have completely lost their reckoning the last winter when reading of ship that had sunk in New York harbor by weight of the ice upon it; also, that Washington had had thirty-four inches of snow on a level and the lowst temperature ever noted in that fair city. I am sure a careful study will show no appreciable change in the cilmate of this earth since the early his-

which changes have been established

THIS ROAD IS A MINT time-marker of their own. They take the kernels from the nuts of the candle tree and wash and string them on the minutes and then set fire to the next one below. The natives tie pieces of bark cloth at regular intervals along the string, to mark the divisions of time." Among the natives of Singan, in the Malay Archipelago another pecultar device is used. Two bottles are placed neck and neck, and sand is put n one of their which pours liself into the other one every half-hour, when the bottles are reversed. There is a line near regular appointed keeper attends to the bottles and rods, and sounds the hour upon a gong.

Characteristic of Funston. The Ohlo State Journal, after interviewing a member of the engineer corps, concludes that Gen. Fred Funstop, the Kansas boy, can be original minute with the comparatively alow even while in a semi-comatose state locomotive, two of which, with two It was before the battle of Carocean. cars, make up the entire rolling stock. He had had no sleep for two days and was in bad shape. He therefore rolled himself up in some leaves and went to sleep. Jeantime, the division received orders to advance, but Funston could not be found. Many scouts had been killed, and it was feared that the Colored the sun shines \$57 days of the average year, and it blends with the crisp, electric mountain are to produce then—had led him into trouble. Presently, however, a glimpse was caught of his red hajr in the tangle, and later of this wealthy road. The road has was in had shape. He therefore rolled though, between the two beaches, sleep. Jeantime, the division received which are connected by a narrow strip orders to advance, but Funston could man that he was, built his road on and killed, and it was feared that the Colo this senson a number of special officers of his red hair in the tangle, and later headed off all would be promenaders they found him shrouded in leaves. As who wanted to save the fare of 5 cents. this is the way bodies are prepared for burial in that part of the world, they got more and more apprehensive with each step, until, at length, some one "Colonel, are you dead or "Neither," grunted the Coloalive?" nel, as he rolled over for another nap;

s Mt. Sangay, 17,190 feet, situated on | fine grade combed yarns. the eastern chain of the Andes, South America. It has been in constant eruption since 1728.

The atmospheric ocean surrounding the earth is frequently disturbed by gigantic waves, which are invisible except when they carry parts of the air, charged with moisture, up into a colder atmospheric stratum where sudden condensation occurs. In this manner long, parallel lines of clouds sometimes make their appearance at a great height, marking the crests of a ripple stockholders are numerically almost as of air waves, running miles above our heads.

Prof. Alexander Agassiz, with a corps of men of science, and under the auspices of the United States Fish Commission, set sail from San Frandorra and San Marino. One never hears cisco about the middle of August, in have restored the 10 per cent reduction anything about either. Philadelphia the steamship Albatross, on one of the most important scientific expeditions of recent times. An immense area of the Pacific Ocean, including the Paumota, the Friendly, the Eilice, the Gilbert and the Marshall Islands, and many unnamed groups of coral islets, will be thoroughly explored for the first time. The voyage will cover about 20,000 miles, and the explorations will include the life and phenomena of the sea from its surface to its greatest attainable depths.

It has often been suggested that the brilliance of the sun's disk is due to incandescent particles of carbon, and within a few years past the presence of carbon in the sun has been demonstrated by the spectroscope. Lately Prof. Hale, the director of the Yerkes Observatory, has shown that there is a thin layer of carbon in the lower part of the sun's atmosphere. It surrounds the solar globe like a luminous shell, and under normal conditions is probably not more than five hundred miles above the sun's surface. But when an eruption takes place from beneath the carbon layer, like all the other constituents of the solar atmosphere, is brok n up and locally dispersed by the tre rendous agitation.

The work of keeping the mouth of the world's greatest commercial river, the Thames, open and free for ships of all classes is not lacking in difficulty. croach upon the channels of the great estuary, and the latest surveys show that the Duke of Edinburgh Channel, which is at present the principal passage into the Thames for heavy vessels, has narrowed since 1882 from a mile and a half to about half a mile. "Its total obliteration, which seems by no means impossible," says Nature, would entail a long circuit at the time of low water." The "Middle Swim," the main route for traffic between Lor don and the north, has also contracted and shoaled much within late years.

Occasionally small diamonds have been found among the ridges of gravel brought down from the north in the age of the glaciers and scattered over the States bordering on the Great Lakes. Prof. Hobbs, of the University of Wisconsin, thinks that these diamonds came from some place in Canada, and that by tracing back the line of advance of the glaciers the original location of the gems may be dis covered. An effort to carry out Prof. Hobbs' suggestion is to be made, and Prof. H. L. Patrchud, of the University of Rochester; Prof. I. C. Russell, of the University of Michigan; Prof. J. P. Iddings, of the University of Chicago. and Prof. O. C. Farrington, of the Field Columbian Museum, will co-operate by examining, without charge, suspected gems found by persons living near the glacial moraines,

the crown of Granada in spite of the superior claims of his elder brother Jussef. He was very unsuccessful in his conduct of the war against the Christians and was at length assassinated by poison absorbed through his skin from a shirt. He entertained a desperate dislike to the brother whom be had injured, and when he knew that his own fate was sealed he sent an order to the governor of the prison in which Jessuf was confined that he should be executed immediately. When the order arrived Jessuf was playing chess with the chaplain of the prison. With great difficulty Jessuf obtained a respite from the governor permitting him to finish the game. Before it was ended, however, news came that the neurper had died of the potson. This cancelled the order of excution, and Jussef, instead of going to the scaffold, mounted the throne.
