Greenville, Miss., April 26 .- There was another break in the levee on the Mississippi side at Shipland, or "The Promised Land" levee, at 10 o'clock this morning, forty miles by rail south of Greenville. The break will cover 19,000 acres of land near the flood, and will add to the volume of water already covering most of the lands in its vicinity. The levee is ten feet high, and the break is fully 300 feet wide. There was a foot on the levee when it gave way. The break will submerge Mayorsville, the county seat of the county, a town of 400 people. The town is situated twelve miles north of the break. From Mayorsville south to the Yazoo river every plantation in Issaquena and two-thirds of those in Sharkey, besides a number of others in Yazoo and Warren counties will be put under water from ten to twenty feet deep.

General Miles Wants to Go to Greece to Observe the War.

Washington, April 26. - General Miles has applied for permission to go to Greece to observe the war between that country and Turkey from a military point of view. Secretary Alger has brought the matter to the attention of the president. Should the order be made by the president, it will be the first time in history that the general commanding the army has gone abroad during actual war as a military attache. It is true that General Sheridan accompanied the German army as an attache in the war with France, but he was not at the time of as high rank as General Miles.

#### TELEGRAPHY REVOLUTIONIZED.

#### Syncronograph Is Expected to Accomplish the Transition.

New York, April 26 .- At a meeting of the American Institute of Electrical Engineers last night Albert Cushing Crehor, professor of physical science, of Dartmouth college, exhibited an instrument designed to revolutionize telegraphy.

'By the use," he said, "of the syncronograph, 3,000 words a minute can easily be telegraphed, and what is, of course, equally important, can easily be received and recorded. A duplex line will carry 6,000 words a minute."

In Chicago last night Professor Crehor's collaborator in the invention of the syncronograph, Lieutenant George Owen Squier, United States navy, was describing the remarkable machine to another branch of the same institute.

It may be here stated that these two gentlemen, Crehor and Squier, invented the polarizing photo-chronograph with which the most successful experiments were made at the electrical laboratory of the United States artillery school at Fortress Moaroe. The photo-chronograph is a machine to tomorrow on the steamship La Chammeasure the velocity of projectiles.

There is some question as to whether or not the authorities have the right to hire out convicts. The matter is being investigated.
