MRS. PINKHAM'S ADVICE.

What Mrs. Nell Hurst has to Sav About It.

DEAR MRS. PINKHAM:-When I wrote to you I had not been well for five years; had doctored all the time but got no better. I had womb trouble very bad. My womb pressed backward, causing piles. I was in such misery I could scarcely walk across the floor. Menstruction was irregular and too pro-

fuse, was also troubled with eucorrhæs. had given up all hopes of getting well: everybody thought I had consumption.

After taking five bottles of Lydia E. Pinkham's Vegetable Compound, I felt very much better

and was able to do nearly all my own work. I continued the use of your medicine, and feel that I owe my recovery to you. I cannot thank you enough for your dvice and your wonderful medicine. Any one doubting my statement may write to me and I will gladly answer all inquiries .- Mrs. NELL HURST, Deepwater. Mo.

Letters like the foregoing, constantly being received, contribute not a little to the satisfaction felt by Mrs. Pinkham that her medicine and counse are assisting women to bear their heavy

burdens. Mrs. Pinkham's address is Lynn, Mass. All suffering women are invited to write to her for advice, which will be given without charge. It is an exrienced woman's advice to women.

The Mysterious Crown Gall. What causes crown gall, what conditions favor it, what will cure it, are problems yet unsolved, according to a recent report from the Utah station, which says: "Almost sure death to a tree, without cure or preventive, supposed to be highly contagious, crown gall is becoming one of our worst orchard troubles. The galls do most dam-Some of them have been brought to age to the peach, though the apple and the old world until after America pear are oftentimes badly affected, and the other fruits, the raspberry especialthe world without leaving the British ly, are sometimes attacked. The name crown gall suggests the nature of the

disease. At the crown of the tree, between root and trunk, rough gall-like marble to that of a man's fist, constitute the disease. When these galls encircle the tree, the flow of sap stops and deach results. The galls are oftentimes found on other parts of the root system, where they do much damage, though death to the affected tree may not occur from galls found in such places. If the galls are on an unimportant root, the root may be cut off and the tree saved. But in general gall-bearing trees will have to be consigned to the brush pile, there to be

For Marketing Eggs.

A regular egg case is doubtless best for carrying eggs to market, but better than carrying them piled up one upon another in a basket is the plan shown in the cut. Get a candy pail at the grocery store and cut from old pasteboard a lot of circles, each one a trifle smaller than the one to go next above it in the pail. Put a layer of are made of 2x10 boards 516 feet long bran in the bottom of the pail, lay the eggs thickly over it and fill in between and over them with bran. Lay on a pasteboard circle and proceed as before. The storekeeper will take out each layer of eggs, lift out the circle with the bran on it, empty the bran into a box or pail. Then when the eggs are all out he will pour the bran all back into your pail, putting the cir-

cles on top, to be used again and again. Packed in this way the eggs will not break, though the horse trots and the roads be rough.-American Agricultur-

Protecting Newly Set Grafts. It often happens that a graft requires several weeks to effect a union with the stock, and until this is done it in liable to be moved by winds, thus loosening its hold and making union Impossible. To prevent this evil, it is always best to fit closely over the graft a small, conical paper cap, which is extended downward far enough to be secured there. This will keep drying winds from browning the leaves, and thus destroying the life of the graft before the union is effected. The cap should be removed as soon as it is known that the union of scion and stock has certainly been effected.

Growing Turn ps.

July is the month for planting turnips. As the seed is small, the ground be plowed and then harrowed down to as fine condition as possible. The most important point in growing turnips is in the fine soil. Sow the seed in rows which will permit of using ese hoes, and seed with a hand drill, which is regulated so as to cover the seed perfectly. Use plenty of seed, as the fly does considerable damage during some years to plants when they are ust appearing. If too thick in the rows and wattles, and diarrhea,

the plants may be thinned with a hoe. Cultivate as soon as the growth of the plants will permit. If this is not done weeds and grass may get the start, especially that persistent pest known as erab grass. A light skinning of the surface close to the plants after every rain, using a hand wheel hoe, will prerent weeds and grass. After the turnip plants have made considerable growth they shade the soil and can hold their own against weeds, but the best crops are secured when the turnips are kept clean. The ground should be manured and the manure worked in with the harrow before planting the seed.

Potatoes Among the Chinese. It has always been supposed that as the potato is a native of the Rocky Mountain regions, both of North and South America, it was unknown in was discovered. This is probably true enough, so far as our present stock of potatoes was concerned. But the potato has been known thousands years in China. It is said to grow wild in the regions of western China near the Tartary boundary. It is very largely grown there, and divides with rice the popular preference as an article of food. It is possible that the potato might have been introduced from western America in the long era when perhaps another continent lay between Asia and America, or when the Pacific was occasionally traversed by adventurous vessels which sailed around the coast in the far north, and then came southward to milder climates along our sible. Alaskan coast.

Water in Farm Crops. Those crops always pay best which have most water in them, as nature The farmer who sells potatoes or roots of any kind of fruits sells what is four-fifths water, while most of the solid part of the fruit or root is taken by the leaves from the air. In growing moisture in the soil is more important than manures. Whatever deepens the soil enables it to hold more moisture and to grow better those crops which depend on abundant supplies of water for success. It may seem paradoxical. but it is true that soll made deep by thorough underdraining will be the moistest in time of drought.

Wheat Drill Attachment. The device shown in the sketch is simply an A-shaped sled placed just in front of the hoes of the common one-horse wheat drill to prevent trash coming in contact with them. It works almost perfectly. The sides of the sled

ATTACHMENT FOR WHEAT DRILL and 31/2 feet apart at the rear. To the crosspiece b is attached a chain, c, by which it is hitched to the drill. The sloping point, d, is covered with an iron band and from the upper end a chain should run to the singletree. Instead of the one chain, c, there should be two chains, one on each side to attach it to the uprights of the drill .-Orange Judd Farmer.

Sharp Tools.

There is little danger that either the by hand. But we have often seen mower knives dulled by contact with stones, or gummed up by the juices of grass so that it required far greater force to run the machine, besides frequent failures to cut all the grass. In such times an hour's work at the grindstone, sharpening the mower knives, will be work that well pays.

COALING WARSHIPS.

This Task at Sea Involves Great Difficulty and Expense.

The inventor who does away with coal as a fuel for warships and also the necessity for taking on fuel so frequently will have achieved one of the greatest triumphs of the age. The coaling of vessels at sea especially in time Hale, "do you know where Noah kept of war is often a most difficult prob-

Apparently methods of coaling have improved but little, and are almost as ble preacher as he passed out of earcrude as they were years ago. There perhaps seems but little need in improving this system when the coaling is done at the ship's dock, but at sea the difficulty of accomplishing the feat is increased a hundredfold. In the former case two or more coal barges are brought alongside of the boat at the wharf and manila fenders are suspended over the sides of the vessel to keep the two from injuring each other. Even under these most favorable conditions it takes hours or even days to coal a big ship. The best time the St. Paul could make before she was purchased by the Government was forty hours for taking on 3,000 tons of coal.

At sea when a ship needs coal it generally needs it very badly, and the coal must be transferred as soon as a collier can be brought to the boat, no matter what the weather may be, whether the sea be calm or the waves running mountain high. The collier must be fastened at both ends to the warship by cables. With these two vessels rolling and pitching to and from each other this joining of the two is a dangerous undertaking, for both might be sunk. The work requires the oldest and most experienced seamen. One set of men The first men drop rubber fenders where they are needed and the others, under the direction of an officer, tug at the helm and drop anchors to control the motion of the ship as much as pos-

The cost is simply transferring the coal is enormous. The St. Louis or the Harvard spends over \$56,000 in a year for getting coal out of colliers into its bunkers. For getting the same amount furnishes the water without charge. of coal from a collier into the vessel at sea the cost would be fully double that amount,

It is said by some that we owe the fife-"ear-piercing," as Shakspeare calls it-to the Swiss, and Sir James Turner, who busied himself in writing on military matters, names it the "Allemaine whistle." In France it was employed at least as early as 1534, in which year it was ordered by Francis I. that each band of 1,000 men was to have four drums and two fifes.

A few years later, in England, we find "drommes and ffyffes" included in the muster of London citizens. Shakspeare refers to the musician, not the strument, when he speaks in the Bread and milk make a good dish for "Merchant of Venice" of "the vile squealing of the wry-necked fife." An old writer observes, indeed, that a "fyfe is a wry-neckt musician, for he looks away from his instrument." About the reign of James II. the fife lost its popularity for a time, Sir James Turner observing: "With us, any captain may keep a fifer in his company If meal is mixed in boiling water the and maintain him, too, for no pay is allowed him-perhaps just as much as

Manila's Cigarette Girls.

One of the most interesting sights of Manila are the cigarette or cigar girls. About sunset any week day you may see coming out of a long, low building near one of the bridges, and wending their way by twos and threes, many hundred women, clad in the simple but picturesque costume of the Indian, of all ages from 12 to 59, most of them having fine eyes, hair and figure, but homely faces.

It's bad form to drink too much wine through the spring and summer will at dinner and it's bad taste in the morn-
