The Trail of the Dead: THE STRANGE EXPERIENCE 御堂的 OF DR. ROBERT HARLAND By B. FLETCHER ROBINSON and J. MALCOLM FRASER (Copyright, 1905, by Joseph B. Bowles)

CHAPTER XIII.-(Continued.) Friday, Nov. 27 .- I have quite an im-Mr. Diary. portant piece of news to-day, So no more grumbles, please, about your having sunk into a weather report. Yes, sir, I have met a stranger-fancy thatsitor, in the winter, at Polleven!

Mr. Hermann-for that is his name -has been a dabbler in science, he tells me, all his life. I shall snare him before long and lay my spoil in triumph at father's feet. Since the weather has been so bad, it has been very lonely for him indoors, poor dear, with only ignorant me for company. I am certain Mr. Hermann will be just the man for him. A good stiff talk will brighten him up won-derfully.

I chanced upon him this afternoon. He was struggling along the cliff edge in His age should the teeth of the wind.

be about sixty, but he is very well preserved. He is clean-shaven and close cropped and is altogether very neat in glasses are absurdly young, if I can so describe them. They are so active and clear that if it were not for the wrin-kles above them, I should have knocked ten years off his age. He asked me the way to Polleven, and as I was bound for the village, I took him in charge. On the way he told me that he had just taken a room at the inn there. He is Henry, which, as he believed, contained writing a book, it seems, and wanted a quiet corner. He will find it at Polleven! He speaks with but a slight accent, having lived much in England, though his father was a German, as his name denotes. This was his first walk, and he seemed much impressed with the wildness of the scenery.

I told father about him at supper. He said he would be very pleased to meet

Mr. Hermann the triumph of success. and father are hard at it over their pipes in the study. They do not seem to be get into dreadful tempers with each othwhen contradicted.

It is the butcher's day at Polleven, so orders. I met Mr. Hermann coming up a homicidal mania. from the quay. mann is unusually well read, and that he had had a most interesting talk with are small and beautifully made, his fin

ence, and, telling him curtly enough that the writing was mine, went out to get the tea. At the kitchen door was the small boy who brought us our letters and papers from Polleven. There was only one letter that afternoon, which I placed amongst the teacups on the tray which

I was carrying to the sitting room. As I entered Mr. Hermann stepped forward to help me. "I fear I am giving you a great deal of

trouble," said he. "Please don't apologize," I answered, laughing. "I always do it when our ser-

vant is out."

"As she is now?" "Yes."

"Then you have no one in the house?" "No one -save my father." "Indeed! Is that so?"

He dropped into a chair by the fire and sat staring into the coals, his chin resting on his hand. Certainly his behavior was extremely odd that afternoon. A his appearance. His eyes behind his he did not speak, I opened the envelope, which was addressed to my father. contained a second letter, and a short note from the editor of the University, stating that a person of the name of Sir Henry Graden had called for "Can tab's" address, and inquiring whether he might have permission to disclose it. He forwarded. he added, a letter from Sir

> an explanation of this request. I have the original letter before me now. This is how it runs:

"Jerrold's Hotel,

"Strand, London, W. C. "To 'Cantab.' "My Dear Sir-As Mr. Rolles, the

editor of the University Review, has not seen fit to inform me of your name and present address, I have written this let er on the understanding that it will be

Saturday, Nov. 28 .- I am filled with forwarded to you immediately. I should much have preferred to explain the mat ter personally, but as I may not receive your answer for several days, I dare not opposed on any big question, which is delay. It is my duty to inform you that most lucky, for some very learned men Prof. Rudolf Marnac, of the University of Heidelberg, is now a fugitive from the police. The charge against him is one I know that the man is of murder. I walked there this morning to give the guilty; I believe him to be the victim of

"So I imagine," I replied. "You relieve me of a load of expla-There is, however, one point nations. on which I myself desire information. Through the courtesy of the editor-or assistant editor-of that admirable periodical, the University Review, I was allowed a glimpse of the manuscript of an article signed 'Cantab.' It was a scurrilous effort, dictated by the meanest jealousy. It was designed to destroy my book-my book which is my life's work -do you understand ?- my whole life's work.

His voice rose to his last words till it ended in a shrick of passion.

"Well, and what of that article?" I answered boldly.

There was a crafty leer in his eyes as he in Farm and Fireside. At one time I spoke again.

"Of course, it was your father's. No ficulty by planting the newer bush sentence it contained was unworthy of limas. The latter however have never so scholarly a pen. But why, dear lady, why was the original MSS. in your hand?

'My father had nothing whatever to do with it," I said, speaking very slow-ly and distinctly. "I wrote it myself." "You!" he cried, staring at me. "You wrote it?"

"Certainly. Do you think me incapable? If so, I direct your attention to the record of the honors that I took at Cambridge."

If ever a lie be pardoned, may I not claim mercy for this of mine? "Will you swear this to me?"

"Why not? I am not ashamed of my work.

He stood staring at the table in front of him for some moments, his hands pressed to his head.

"She must suffer, then," he muttered. "But if I had known! A girl-it was hardly worth the trouble."

"Don't you think you had better go back to your inn?" I suggested.

"Not until we have settled our little account together, dear lady. You are young, yet young vipers can sting. Is it not better at once to put an end to their powers of mischief?"

"Yet the young can run where the old cannot follow. I am nearer the door than now put several rows side by side, and you. At your first movement I shall be clear of the house.

"And leave your father as a hostage." His words struck me like a blow. 1 swayed forward, gripping the table with both hands. He could have seized me then if he had wished; but he knew I was in his power, and held away.

continued: "it must be either you or him. There is no way of escape for both, I am afraid."

I am writing down the facts as they occurred. I desire no credit for following my duty. What I did then, many ably so, to the strings, even without thousands of girls would do to-day. For much assistance or coaxing on the part there remained no way out of the pit of the grower. which we had fallen-my father into

and I-save one, and that I accepted gladly, readily.

"Then take me," I said to him. "You have sadly upset my little arrangements. I had not thought of so fair an offender. Let me see." He paus-

They are trained to a

post, wire and string trellis. Posts should be set firmly, and not too far apart. I use galvanized wire

of fair strength and find it good for a number of years. It has to stand quite a strain, as the load of thrifty vines is very heavy, and I, therefore, give as much support, by supplementary stakes (between the posts), as is convenient. The wires are made to rest in a crotch at the upper end of the pole or stake. To make the trellis still stronger, I

LIMA BEAN TRELLIS.

connect the posts and stakes across the rows by cross strips fastened high enough to allow the horse in cultivating to pass under it.

For each row I stretch two wires, one about six inches above the ground surface, the other about five feet from "Do not forget that, dear lady," he the ground. Common binder twine is wound zigzag around the two wires. It makes a useful and quite ornamental support for the limas, and the vines take readily, particularly and remark-

Superiority of the Mule,

The mule is less nervous than the horse and therefore loses less energy in useless fretting. In fact, one of the chief characteristics of the mule is his ability to take care of himself under all circumstances, says Farming. Much make every effort count. The result of this instinctive care on the part of the mule is that he is able to turn out "Let us make a move to the front a horse of the same weight under the same conditions. The mule instinctive-

danger which are not so successfully avoided by horses. It is a matter of

Make an Asparagus Bed.

Here is a reminder from one who evidently appreciates the good things every farmer may have in his garden. He advises everyone to make an asparagus bed, and says very truly it is easily and quickly done. Asparagus needs a rich, mellow, warm soil. Manure the ground thoroughly with well rotted stable manure. Plow eight to ten inches deep or deeper. Plant in a long row. Pulverize thoroughly with disk and harrow. Secure a hundred 2 year-old plants at a cost of from 50 cents to \$1. Open a row with plow or a cultivator. Set plants two feet apart in row with crown three inches below surface. Press soll firmly about plants, fill up the row and cultivate same as corn or beans, and next year you will have an abundance of delicious and healthful food, and the same will continue for years if you keep free from weeds and add each year a fresh supply of farm fertilizer.

Value of a Silo.

It is very important to provide some means by which the dairy cow can be supplied with good food at all seasons of the year in order that she may yield milk most economically. Such medium may be found in the silo which furnishes a place for the storing of food in the form of silage. It is a wellknown fact that the nearest an ideal food that can be obtained for the dairy cow is good pasture; but for several months in the year green pasture is not available. At such times the best substitute are corn sliage and such roots as mangels and turnips. Corn yields an average of twice as much dry matter per acre as root crops; and since the latter involve much more labor, and greater expense, silage is far more economical.

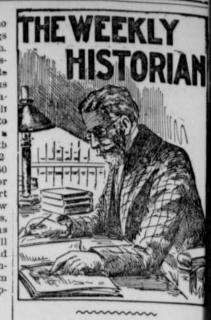

How to Grow Rhubarb.

Have the ground on which rhubarb is grown very rich, it requires wellrotted manure. Divide the roots, allowing one tuber to the hill. This should be done every other year. Keep the dirt hoed up loosely around them and as soon as the first leaves come and begin to droop over on the ground, cut them off; this will start the stalks to growing the taller and straighter. All stalks should be cut when they be gin to droop toward the ground. Never pull them, for if you do, you take with them the shoots for the next stalks and also break the small roots that help nourish the plant. Cut them one luch above the ground. Always cover with about three inches of straw in the fall. Follow these rules and your pleplant will yield abundantly till frost kills it.

Home-Made Corn Sheller.

This is a cheap way to make a good corn sheller. Get a poplar plank six inches wide, one inch thick and three

Sunday, Nov. 29 .- Mr. Hermann sat behind me at church this morning. sang the hymns in a high voice that would have been amusing under ordinary circumstances. Atter church he walked with me some distance up the hill. He condoled with me on my lonely life, and To make amends, I invited him to 11.

tea on Tuesday. Monday, Nov. 30.—Father is not so well to-day. He has had more trouble with his cough, I fear, though he tries to make light of it. I wish I had not asked Mr. Hermann. I must take care that he does not see father to-morrow. The doctors were most particular in their instructions that nothing should over-excite him; I fear that the two might get into some silly argument.

CHAPTER XIV.

Tuesday, Dec. 1.-Under this head my diary is a blank. I will try to set out the events of that day as calmly as I May God in His mercy help me, in His good time, to forget them!

My father seemed no worse in the morning, though by my persuasion he kept to his bed. His own room was on the ground floor-for he had been forbidden to climb stairs-and looked out upon the little garden at the back of the ground, at his own terms, and try the cottage.

Marjory had begged off for the afternoon, and I agreed, though this would leave me alone to serve my visitor. However, tea-making is no very difficult matter, and to pacify me Marjory had cooked one of her best cakes. She left shortafter two; Mr. Hermann arrived half hour later.

I had not expected to see him so early. was copying out some letters which my father had dictated, when he knocked at the door. As I showed him into om, he chanced to pass the table on which they lay. "What a beautiful hand your father

writes!" he said politely.

"Thank you for the compliment, Mr. Hermann," I answered. 'My dear young lady, I am too old for

riddles.

"The writing is mine.

"Is that really so?" he exclaimed, with a quick, startled look at me. "I could harsh note in his musical voice. "May I ave guaranteed that it was a man's Is there nothing private herehand. may I examine?

Oh, certainly," I said. "They are letters to tradesmen.

He picked up the sheets, and moving to the window examined them closely.

"You are sure this is your writingthere is no mistake?" he said presently.

I was rather annoyed at his persist-

doubt of any pleasant stranger, I beg you to note his hands.

"On receipt of your answer I am pre-He pared to come to you at once. I shall then be able to give you further particulars

"I beg you not to disregard this warning, and until you see me to be most careful in your movements. Of course, that always annoys me. Indeed, I am if your pseudonym is an absolute secret afraid I was rather rude to him about you will be safe enough. But there are always chances.

"Sincerely yours

"HENRY GRADEN (Bart)." I glanced up cautiously. Mr. Her-mann still sat huddled in his seat by the fire. One of his hands I could see clear-ly, for it lay upon the arm of his chair. It was small as a woman's, and the unils had received so fine a polish that they shone pinkly in the firelight!

A wild terror clutched at my throat, so that for a space I sat dumb and motion less, gasping for breath. But then there came to me the realization of the purpose for which this man had come, and at thought of it my blood came surging back into alert activity. There may be many an English girl who loves her father as dearly as I do mine, but there is never one of them that loves him more. can say honestly that after that first great shock of fear my mind was swept clean of my own danger. For my father I was ready to meet death on his own 8411.0

And yet my first act was one of such folly that I can bardly bring myself to set it down. Perhaps it was that the words of the letter were rioting in my head; perhaps that my whole will was centered in an effort to control the tones of my voice.

"Do you take sugar in your tea, Prof. Marnac?"

That was what I said to him.

It was out, and I could not recall it. As he rose, I sprang back, placing the table between us. A cup, caught by my skirt, smashed loudly on the floor. So we stood watching each other.

He showed no sign of anger. Only the expression of his eyes had changed to cold, sneering insolence that was a most dreadful thing to see in so old ; man.

"I observe, dear lady, that you hold a letter in your hand," said he, without a suggest that it contained the discovery which you so very incautiously have an nounced ?"

"I shall answer no questions."

"If you will consider, dear lady, you will perceive that you merely waste time. Tell me-do you know the object of my visit?"

I hesitated a moment. Was there anything to be gained by pretending ignor- Baltimore American.

in the porch and watch you as you walk over the moor, down into the little valley, up again, and so to the cliff edge. After a time for suitable meditationlet us say two minutes-you will step off into eternity. Do not fear, it is an easy method of putting an end to an infinity of troubles. • • • Keep back! keep

back, I say!"

the smoked glasses, "would youse give er dime to a pore man wot impaired his to become compact again. Water filsight a-lookin' for work?"

"Huh!" rejoined the female with the cold-storage heart. "You must have been looking for a mighty small job."

Defined.

"What is love?" asked the beardless youth, after the manner of his kind. "Love," answered the man with the absent hair, "is an obsession that will cause two otherwise sane young persons to leave their happy homes to become flat dwellers."

All Had a Hand, "Who scored that new opera?" "About all the critics, I believe."-

Fumigation to Protect Orchards. In Germany some interesting experiments have recently been made in the protection of orchard trees against night frosts by means of fumigation. A part of an orchard in bloom was thus successfully guarded against an April frost by the dense smoke of napthalene. But the experiment was very expensive, fifty kilograms of napththalene being consumed by seven flames in one

"I tell you," said the tall man with hour. Later a new preparation of chemthe carroty whiskers, "the Chinese are Icals was tried, producing a comparatively large volume of smoke with the "I should say they are," replied the expenditure of only two kilograms of short man in the green suspenders, the material per hour. These trials are "Why, my laundryman has actually ta- under the direction of an experimental gardening association.

Pulling Old Fence Posts.

Fasten chain to post close to the ground, pass it over the wheel of an

POST-PULLING DEVICE.

ordinary corn planter, hitch team to chain and go ahead. It don't damage the wheel and the broad tire keeps it from sinking into the ground,

Setting Fence Posts.

Some farmers argue that it is best to set posts early in the fall, when the ground is solld. Of course, a post carefully set at any time will remain in its place, but the fall season is really a much worse time than in the spring. "Please, ma'am," said the hobo with Digging the hole makes the soil loose, and if done in the fail it has not time ters down through the loose soil, which will raise the post a little every year until it throws it out altogether. If the soil has time to settle it absorbs less moisture, and after the first year. if the heaving out has not already begun, it will rarely begin.

Anthrax and Earth Worms.

From recent experiments it is certain that earth worms are responsible for conveying the spores and anthrax from various buried carcasses to the surface of the earth and thus bringing about a reinfection. This process of reinfection was urged by M. Louis Pasteur, but without success.

feet long. Dress the plank smooth;

drive some 8-penny nails into the plank to within one inch of the heads; put them one-half inch apart in rows in a square six inches each way.

Bees and Smoking.

Many times bees are smoked more than is necessary ; perhaps, because not every one knows that during a nectar flow some honey is lost every time a hive is opened, says Farming. When bees are smoked they fill themselves with honey and if so much smoke is used that most of the bees in the hive at that time take honey, it will be more than an hour before it is redeposited into the cells and the regular work resumed. Bees sometimes gather nectar enough to make a pound of honey an hour, so one can see that it would be quite a loss if every colony in a fair sized aplary were smoked enough to interrupt the work for one hour.

To Ripen Cream.

Cream left to itself will become sour spontaneously. This is the result of the growth of lactic acid bacteria, which feed upon the milk sugar, and as a final process convert it into a lactic acid. Other forms of bacteria are always present in cream; some have little or no effect in the ripening process, while others, if allowed to develop, produce undesirable and often obnoxious flavors. To cultivate and develop these "wild" germs is called 'spontaneous" ripening, and is often attended with uncertainty. Good butter making demands the use of a "starter," either home-made or a pure culture. The former should be made of selected skim milk.

Keeping Hogs Clean,

To give the plgs a thorough scrubbing may appear to be labor thrown away, but if two lots of pigs are treated allke in every respect, except that one lot receives a thorough scrubbing with soapsuds once in a while, there will be a marked difference in favor of the hogs that are washed when the time for slaughter arrives. A clean bed of straw with a dry house, so as from 1000 to 1904, while the capital to afford them comfort at night, will creased 41 per cent. An interesting of also promote thrift and growth. The hog is naturally a cleanly animal and enjoys a bath. If considered a filthy try in this country and though England has 362 furnaces at a though England has 362 furnaces at a second animal, that devours filthy food, it is and the United States 323, still and the United States 323, because of the treatment given.
