that convinces him in advance that their particular spot on this great earth is the one in which he should live. We have only one month left before the sale begins.

Rates to Oregon from Kansas City, Omaha, St. Paul, Minneapolis, and all the great Missouri Valley and west of there, is \$25, with a reduction of \$2.50 on each ticket east of Umatilla; from St. Louis, \$30; Chicago, \$33; New York, \$50, and a proportionate rate from every other point, large or small, but this ticket must be bought to your station, and not to Portland or some other city, if you expect them to come to you, and it devolves upon the readers of this paper to see that every letter that goes out of the post office carries with it correct information relative to these rates. Get all the facts from your local agent.

Get together from 10 to 25 active citizens, raise a little fund for the publication of a small leaflet giving the important facts relative to your community, along with these rates, and have the leaflet so light that it would not add to the cost of postage of a letter, and have a copy of it put in every letter written by business man or citizen.

Several ministers throughout the different parts of the state, realizing the importance of these rates, are announcing the details about them to their congregations and are asking that they write to their relatives and friends at a distance and tell them how cheaply they can come to Oregon.

Get your commercial body, or some one of your business men to offer a prize to the boys and girls who will write the greatest number of letters, or who will get actual results in bringing another family into the community.

The work of advertising these colonist rates is up to each community and each individual. If we could add a hundred thousand to the population of Oregon in the next year it would mean many millions of dollars of additional wealth to the state.

The school population of one district in Tillamook County was doubled in six months through the correspondence of the pupils. Corvallis caused the sale of \$600,000 worth of land through advertising in well-known agricultural papers in the older states. The Oregon Development League received over 16,000 inquiries from people wanting to know about Oregon farming lands.

There is an intense desire to come to the Pacific Northwest on the part of the people of the United States and this is particularly true of Oregon. Make it intensely true of our community. See your local agent and find out the exact rate. Get more particulars—post others—put up attractive notices in the post office and in other public places—get the new-comers to write to their old home papers, and as an inducement to do this, let them understand that they can compete for the eighty prizes, or a total of \$5000, offered by the Portland Commercial Club.

Nothing means so much to Oregon as the colonist rates, and when you read this remember that there is only one month in which to get in advance work.

Never mind the heat. Don't allow that lazy feeling to keep you from doing your duty. The new home-maker may buy something you want to sell.

—Men's patent leather button three quarters boxing cloth top, very neat Oxfords at Bailey's.

—Emory grinding done at the Miles Purdin Shop, First avenue.

—Take your Mohair and Wool to Hoffman and Allen Co.'s for highest prices.

—See Hoffman & Allen's windows. They contain new creations in skirts of all kinds.

—Men's gun metal, Blucher cut oxfords, medium high heel the latest at Bailey's.

—Hoffman & Allen Co. will pay the highest price for Mohair and Wool.

—Bring your wool and mohair to us. We will give you the most for it.—Bailey's.

—Ladies' hand turned patent leather oxfords, plain toe. Bailey's Big Store.

NEW HANDMADE LACE.

Princess Applique as a Trimming For Summer Gowns.

Never before has there been such a demand for handmade lace as an accessory to the toilet, but it is very expensive and out of the reach of most of us. In the easily made princess applique the woman of limited means has an opportunity of providing herself with everything requisite or in addition to a slender income by making it for others.

It is absolutely necessary that the net and materials used be of the very best, and even then they will cost very little.

There are two kinds of net sold for the purpose—fine for personal use and coarser for household articles.

The braids are made in various widths and degrees of fineness to suit individual taste. Of course for delicate designs very fine braid will be used, while for the bolder designs a coarser and wider one will be employed. The lace thread matches the braid in fineness, while all can be obtained in either white or cream color.

When tacking the net over the pattern be careful to have it perfectly smooth and flat and without creases. Tack all around the edges and here and there throughout, so that the net will be kept in place over the pattern, and keep the long stitches at the back of the foundation. If the design con-

SIMPLE PATTERN FOR PRINCESS LACE.

tains flower sprays the stems may be worked in darning, commencing well up to the flower pattern, so that the ends will be concealed beneath the braid, and working downward to the end of the stem and then up again to the beginning.

Care must be taken to have the stems gracefully curved. The braid can be cut where necessary for the neatness of the work and the ends turned in and sewed down in place.

The illustration shows a very simple design for the beginner, worked on the new shape cuff, and the materials used. The design is so simple that the merest tyro will find no difficulty in drawing it with pen and ink on a piece of white, somewhat tough, but pliable paper cut to the shape.

Tack the net carefully over the lines as illustrated. Then remove the net and darn in the centers with embroidery cotton.

The little rings can be bought or made by winding cotton round a small mesh and then working over this ring a close row of ordinary buttonhole stitch and then sewed into place. Be careful to sew the braid on the outside of the curves first. When the sewing is completed press the work on the reverse side with a hot iron.

Wonderful Collection of Chinese Vases.
In olden days these mantel ornaments came in sets. These are unique through the fact of their being three

pieces and a pair. Oriental in shape, they are English in decoration, the Chinese dog which is seen on each cover—showing their origin.

THE NEW VERMIN EXTERMINATOR.
It is a dessert for Rats and Mice. They crave it, but it is the last they ever eat. It kills the Rodent, seals up the pores of the skin and Chemically Cremates the body. Absolutely no smell. Guaranteed if not satisfactory, your money back. FOR SALE BY

Dairymen's Corner

Holding Milk and Cream

What is now needed is a satisfactory method of holding the milk and cream in good condition up to the time of delivery. The length of time which milk and cream can be held in good condition is determined by two things, the cleanliness with which it is handled and the temperature at which it is held. We would not like to admit that refrigeration is more essential than cleanliness, but we know this to be true. By using the greatest precaution in milking and handling milk and cream, it is practically impossible to obtain it absolutely free from bacteria. When we think of the rapidity with which bacteria multiply, conditions being favorable, a single bacterium reproducing itself in from fifteen to forty minutes; we realize that milk held at ordinary temperatures, in the course of twenty-four hours will contain many million per cubic centimeter. One of the easiest methods of arresting the development of bacteria is by subjecting them to cold. What the producer needs is refrigeration. Nothing could do more toward the producing of good butter and good cheese than the holding of the milk and cream at low temperature from the time of milking up to the time of delivery at the creamery or cheese factory. Knowing this, the dairy division of the United States Department of agriculture, also the dairy sections of the various experiment stations and colleges, are doing what they can to induce the farmers and dairymen to use water and natural ice for cooling.

The dairy division has been sending out plans for building ice-houses and giving any information they can regarding the benefits to be derived from the

use of ice. In some sections of the country, where the possibilities for producing milk are greatest, natural ice is nearly unknown.

The producer in these sections is almost wholly dependent upon artificial refrigeration, and at the present time has very little.

Let us review briefly the relations of refrigeration to butter and cheese:

To obtain the best finished products we ought to have it for preserving the raw materials (milk and cream). To obtain a uniform grade of butter we are dependent upon definite temperature during the process of manufacture. We have cold storage to keep butter from the period of greatest production until time of shortage. The value of cold curing of cheese is each year being better understood. The manifold relations between refrigeration and dairy products make us aware of what we owe the refrigerating engineers.—Kans. Farmer.

GOOD DAIRY POINTERS

Pastures beginning to drop off? Now is the time to start in on the soiling crops. If the cows begin to fall off in yield it will be hard work to bring them up again this season.

For keeping up the flow of milk we like to have some oats and peas to feed first. We try to make two or three sowings of oats and peas, so that they come on at different times.

It is not always the cows that give the richest milk that are the most profitable. We want quantity as well as quality.

The more there is of the small white clover there is in your pasture the better the cows will hold out in their milk. Nothing is nicer for the pasture than that.

It does seem as if it would pay you to spend the time every morning to

spray the cows before you let them out to pasture. As it is they spend a good share of their time fighting flies or standing in the shade where they will be free from the pests. When they are doing that they are not eating or chewing the cud with any degree of comfort, and when they are not doing that they are not making much milk for you.

Don't mark your butter "fancy" unless it really is fancy. If you do, it will not be long before your customers will tell you that they have different ideas about what fancy butter is from what you have and you will have to hunt up new markets.

Brindle cows are usually good ones, but not all good cows are brindle.—E. L. Vincent.

STATE ACTIVITY NOTES.

The supreme need of all Oregon and particularly our community is more homemakers. The opportunity to secure them under the most advantageous conditions is now at hand.

Several cities, towns and villages in this State will make a material addition to their population as a result of energetic work done collectively through the commercial bodies and individually by the citizens in advising thousands of people back East of the low priced one-way colonist rates which will be put on sale September 1st and continue until October 31st, to Oregon, from all points in the United States.

These rates are agreed upon by all the railroads in the United States and Canada and are controlled by the Trans-Continental Passenger Association, and Oregonians must bear in mind that the home-maker is being invited on similar rates to Canada, California, Washington, Texas, Georgia, Oklahoma and other States, and the state and community to which he buys his ticket is the one
