AIDING THE STRANDED

COOD WORK DONE BY AMERICAN SOCIETY OF LONDON.

It Assists Yearly a Thousand Fellow-Countrymen Who "Go Broke," Either by Sending Them Home or Lending Them Money.

The American Society of London helps upon an average a thousand stranded Americans in a season. So far this year, however, only 700 have been assisted, the New York Sun's correspondent says. The officials of the society attribute the falling off to the stories about high prices that preceded the coronation. The society, which has been in existence for 12 years, has paid the passage home of over 10,000 persons and has supported numbers in London until the arrival of funds.

Only five per cent. of the money expended has been returned. This, however, is not considered proof of a lack of gratitude on the part of the recipients, as a return is not expected of most of the beneficiaries. Of those who have been expected to repay 20 A per cent. have kept their word. considerable part of the efforts of the society is devoted to the assistance of American sailors. The home government through the consulates assists American sailors on American ships, but American ships are few and the number of stranded American sailors is considerable. The society is doing a work that many think belongs to the government.

Despite the supposed non-existence of a color prejudice in England, the society has the utmost difficulty in securing the return of American negroes to the United States. A white man can be assisted and can get a working pressure is greatest from two to six passage to any part of the country, but only three ports. Newport, Cardiff and Swansea, are available for the signing on of negroes.

> It is noticed this year that a number of husbands have deserted their wives in England, leaving them stranded. This contemptible method of getting a divorce on the ground of desertion has been nipped in the bud in a number of instances this year.

> Twenty-five per cent. of the applicants for assistance are not Americans, but Englishmen who think the society an easy means of getting free passage to America.

The usual story is that the appligave up the use of the silo in disgust cants are naturalized citizens, but they are never able to present their made air-tight. Unless the walls of to a more progressive man, who built naturalization papers. In previous wooden silos are made air-tight, with partitions across the same silo, mak- years school teachers have made up a tar paper, felt pads, or clay worked ing four small silos out of the large considerable percentage of the appli-into the joints, much silage will be one, and had no difficulty in obtain- cants, but with the development of wasted. Ninety per cent of stave silos ing good silage for his stock. The silo personally conducted tours with all should be deep. The deeper the silo charges included, there is now scarcely a case a year. Only one-third of The diameter should conform to the the sum expended is contributed by size of the herd, and if two inches of members of the American society. The occurred because the ends of the silage are fed each day there will be burden falls, with a few exceptions, upon the Americans who reside in

fall down as the staves shrink. Some times the iron splices rust. Unless a stave silo is well anchored it may be moved from its foundations or even blown down.4

The walls of a silo must be rigid or they cannot stand the pressure. When the sides begin to bulge, air can get between the silage and the walls.

Brick siles without reinforcement have been failures because of the pressure from the inside.

The modern silo is a structure with air-tight walls and a height usually spring.

the farmer wants at least a ten-horsepower as the purchase price and the cost of running one is but very little more than the cost of a smaller one and with the larger engine you can do a great deal more work than with the smaller one. With my engine I can drive a corn-

shredder just as easily as a steam engine would and with much less cost as the engineer's wages are saved. besides the cost of fuel for steam power, which is greater than the cost of gasoline for the same power.

For ten hours' running of my engine, which is ten-horse power, it takes ten gallons of oil per day. This at eleven cents per gallon, makes the tost of running for ten hours \$1.10that is when running up to its full capacity.

But, when the work is not so heavy you can run on less oil. This depends altogether on what you are doing, or the power necessary to do it.

This same engine may be used for driving a wood-saw. All you need is a saw frame, a good-sized circular cut-off saw and about 40 feet of sixinch belt and you are well equipped tions taken against the spread of the infection in the neighborhood. for wood-making.

With this outfit two men will saw as much wood in five hours as four men will saw in ten hours with the common cross-cut saw and do it so much easier and cheaper.

Avoid Close Grazing. Close or late grazing should be carefully avoided because the young plants I also use my engine for pumping need their green leaves in order to all the skin off our fingers .- Detroit water and running a cream separator. produce a vigorous root growth,

should irritate myself too much. The monks of the Middle Ages were not so very much in the wrong when they asserted that Greek was the invention of the devil. Lord knows what I suffered through it. It went better with Hebrew, for I always had a great predilection for the Jews, although they to this very hour have crucified my good name, but I never could get so far in Hebrew as my watch, which had an intimate intercourse with pawnbrokers, and in consequence acquired many Jewish habits-for instance, it would not go on Saturday-and learned the hold language, and was subsequently occupled with its grammar, for often when
