## THE LARGEST PHOTOGRAPH.

The Scientific American, of September 9th, gives this account of the making of a photograph that cost

attended by the cat and ber two at the World's Fair is to be seen in was surely going to die this time. little kittens and lame old Beppo, the gallery of the Mining building. It belongs to the exhibit of the rifle. Resting his elbows on his Standard Oil company. Among knees and his chin in his hands, he other things are transparencies illustrative of oil works and distilleries, storage tanks, etc., in various parts of the country.

> Recently the company had a large "I wonder if the birds and squirrels relief map made, and the work of feel as frightened as I did. I guess they do, for sometimes, when I only hurt and catch them, their hearts as just thumping. And how cowardly tographs. A good sized negative that big man seemed coming out to shoot me—so much smaller! But tographs. A good sized negative was made of the relief map, and upon I'm a great deal bigger than the a paper print from the negative were things I shoot, and we don't use From the print a negative twenty them in any way. Mother won't inches square was taken, and from this an enlarged transparency on glass, seven feet long by four feet two inches wide, was made.

> No ordinary camera could do the work, so the photographer made a camera of a room twelve by tifteen first in size. The room was blackened inside and made light and even air tight. The shutter was placed in the window and the lens in the shutter. Mr. Hillers had three expert "She's ever so much better, I photographers assisting him in the work, and they built a silvering vat which used \$250 worth of nitrate of |silver, and a developing vat, both in the gigantic camera, so that probalaughed Rob, turning toward the biy for the first time the camera room.

The work was focused on a groundglass plate, the same size as the photograph. This was done by three men holding the plate and moving it back and forth until the proper tive plate was made ready. This was a piece of American plate glass, three-eighths of an inch thick, made never before been attempted on such a large scale, Mr. Hillers was obliged to feel his way, for he did not know just how long the plate should be exposed. A test was first, made with a small plate, and this gave him an approximate measure

With rare good fortune, the first exposure of the new plate was a sucthe head, and a note dropped into cess, and a beautiful photograph was secured. Then a specially arranged hose was turned against the big plate to wash away the chemicals, It took an hour to do this. After And Robert Anderson Craig is a the toning process came the matter boy who will keep his word. of varnish. This was the critical was laid on four rubber balls, one at each corner, and Photographer Hillers tilted it while an assistant poured on half a gallon of varnish. Success still remained with him, and the transparency was ready for its
