FRUIT AND FLOWERS

DAHLIAS.

Beauty and Decorative Utility of Different Varieties.

Among the flowers which are now largely used in our gardens few are more popular than the dahlia, says I. L. Richmond in The Queen. The original form of this flower has undergone so many transitions that we now have distinct groups of tall and dwarf varieties, cactus dahlias, too, in single and double forms, and these, with their starlike flowers and elegantly twisted petals, are certainly the most beautiful of all.

The dwarf, or pompon, form of the dahlia is very useful for bedding purposes, the brilliant colors of these neat little flowers being very effective in the border. Although the blossoms are small, they are so well held up above the foliage and produced in such profusion that they give rich coloring to the garden, and if plants are selected with care, so that the height, which varies from four feet to two feet, is considered as well as the tints of the blooms, few plants will give a brighter effect in a mass. Ceres, a very floriferous variety, in pale primrose, makes an excellent center to a large bed, with Fashion, light orange, also a profuse bloomer, as the next tint and Little Dorrit, a dwarf plant with the richest maroon flowers, as the outer circle; or Guiding Star, a lovely white variety, three feet high, may be used with Bacchus, in brilliant scarlet, which does not exceed 2½ feet in height, edging the two with Little Sweetheart, which is a dwarf plant bearing red flowers tipped with white. Mrs. Walter Besant, in shades of salmon pink, is very beautiful, and Revenge, in rich purple and mauve, is distinct and handsome. The variety of tints is endless, but any of them which tend toward majenta are best avoided, as they never harmonize well with the rest.

Messrs. Dobbie's new introduction, Mrs. Ireland, is in shades of orange scarlet and white, a very brilliant flower, which does excellently in a balcony

CACTUS DAHLIA ETHEL.

when grown in a large pot or a box of rich soil. In fact, all the best dahlias can be cultivated with success for the decoration of verandas or balconies, and, as the rooted cuttings can be obtained early in the spring, there is no difficulty in having them in bloom in June, when they will continue to supply a quantity of flowers until the latest autumn.

A new race of hybrids, combining the older pompon dahlias with the cactus varieties, has lately been introduced, the lovely Aurora being one of the best of these. This is a dwarf plant, producing many flowers in exquisite shades of salmon pink and vieux rose, with a metallic blue sheen on the tips of the petals, giving it a very refined and uncommon appearance. The blooms are small and of the cactus shape, a most decorative plant either for the border or the balcony. Cannell's Gem is a pompon cactus in shades of scarlet and yellow, a glowing little flower of good form and habit, not exceeding two feet in height. Crawley Gem must not be forgotten in this connection. It also is a pompon cactus, deep blood red in color. These three will probably be the forerunners of many others of these fascinating flowers, which are perfect for cutting, not being so heavy as those with larger blossoms and consequently far easier to arrange in vases. Of the true cactus dahlias there are now a great many, but they are not all of that perfect form, with quilled petals, which is seen only in the best varieties, such as Ethel, here represented.

For Easter Bloom.

Dielytra spectabilis is one of the easiest plants to force into bloom that can be taken in hand. It responds to heat so readily. To bloom for Easter four weeks should be ample time in a temperature of 50 to 55 degrees—not higher, or the growth made will be too soft to stand well, says Gardening.

The buds of the Easter lily should be well developed four weeks before Easter. Then darkness and coolness will retard growth; heat and light will hurry it.

Mosquitoes Drive Cattle to Suicide.

"It is said that man is the only animal who perspires all over, laughs and commits suicide," remarked a resident of the lower coast to the New Orleans Times-Democrat. "The suicide claim has been disputed, however, and I can furnish a little evidence on the subject myself. Down near the mouth of the river the mosquitoes are at times a pest of a very formidable character, and if they are any worse in the Klondike I wouldn't go there for enough gold to start a brickyard. They come in swarms so dense that they look like clouds of black smoke, and when they make a decent there is nothing to do but beat a retreat. Of course cattle suffer intensely, and the poor beasts will become absolutely maddened by the pain. The mosquitoes penetrate their ears and nostrils, and on several occasions I have seen cows and steers rush into the river and to all appearances commit suicide by drowning. I mean that they wade into comparatively shallow water and deliberately hold themselves under water until life is extinct. Anybody who lives in the neighborhood will bear out the assertion, and if the act is not intentional suicide it certainly has all its aspects. It is a common thing to see cattle run into the river and submerge themselves until only their noses protrude. Old settlers say they will stand that way all night, and I know from personal observation that they will hold their position for hours at a time."

Shorts Not Good For Steers.

Shorts are not considered a very satisfactory feed for fattening cattle unless some of the lighter grades are used which are similar to bran, writes Professor Curtiss in The Breeder's Gazette. At the prices named corn is a cheaper feed than shorts, and I would not advise using more than two pounds of the shorts per head daily, and if the cattle are to be fed on grass it is not likely that it will prove profitable to use any shorts.

Gluten meal or gluten feed can be bought at about the same price as that quoted for shorts, and either of these will be much better for combining with corn and cob meal, as they are richer in both fat and protein and are better fattening feeds. If the gluten feed is not available, it would probably be more profitable to use one to three pounds of oilmeal per head daily during the finishing process, or for the last two or three months, at $20 or $22 per ton, than to use the shorts at $14. Oilmeal added to corn and cob meal will make an excellent ration for finishing fattening steers.

Grass For Pigs.

Notwithstanding the anatomy of the pig would seem to dispute the proposition, grass is necessary to its best development, says Texas Farm and Ranch. The small stomach would seem to indicate a grain ration or concentrated food of some sort, and so it does. Hogs are wanted to consume a large amount of feed, converting it into pork. Therefore the first thing required is to enlarge his capacity to eat, or, in other words, to enlarge his stomach. Grass, being bulky in proportion to its nutritious qualities, is the very thing and involves the only known method of enlarging the stomach. At the same time it furnishes the protein needed to develop flesh, muscle and bone. Then when we have a large frame built up with enlarged digestive capacity it is an easy matter to put on the fat with corn or other carbohydrate feeds.

Pedigreed Stock.

If the time to begin the education of a boy should commence at the birth of his grandparents, as has been said, the time for the selection of breeding animals should begin equally early, declares The American Cultivator. Herein lies the value of a pedigree for all farm stock, but it should be unbroken, not only in the line of descent, but in the possession of those qualities desired in the future animal. A neglect to conform with this requirement has caused some to lose faith in the importance of hereditary influence. "There are black sheep in every flock" is an old saying, and if one desires white lambs it is not well to accept the black sheep to produce them from, no matter how white its ancestors may have been. This is equally true in breeding any animals for special purposes. If one is not true to the characteristics of the breed, not the blood of blood should lend to its preservation to perpetuate the breed.

MONEY IN HORSES

BREEDERS DOING THEIR BEST TO SUPPLY THE DEMAND FOR SUPERIOR ANIMALS.

Advices from many of the breeding districts prove that the breeders of trotters and pacers are contemplating the mating of all available mares this spring, says The Breeder's Gazette. The owners of mares that might reasonably be expected to produce speed never discontinued breeding them to the extent reached by the farmers. For that reason the supply of trotters and pacers has not grown with the lapse of time so small as the supply of the commoner kinds of horses. Despite this

SHIRE COLT.

the demand for trotters and pacers of anything like high class has been extremely brisk this year, and the prospects are that without anything to cause a great setback the advance in values will proceed.

The department of agriculture gives us the pleasing information that the average value of horses has again risen during 1899. In 1897 we reached bedrock in prices, as in that year the average value of horses was only $31.51. In 1898 the value rose to $34.26, and in 1899 it was $37.40. But the numbers have been steadily falling since 1893, when we had 10,206,802, until in 1899 we had 13,695,307, a loss of 2,541,495, or at the rate of nearly 425,000 per year.

Extreme speed is what brings money today, says The Farm Journal, but it costs a great deal to raise fast horses, because there are so many blanks, and the development of those that prove fast is so expensive that men of moderate means cannot afford to dabble in fast horses. The best trainers command salaries of $4,000 to $6,000 per year, and a poor trainer is dear at any price, because he is liable to spoil a really first class horse if he is given one to handle. To sell without developing a horse is next to impossible at any price representing a profit. On the other hand, horses without great speed and combining size, style and pleasing colors can be sold to great advantage without expensive trainers and scientific training. Compactly built hackneys fill the bill.

Hungarian Hay.

Please allow me space to describe my experience in raising Hungarian hay and using it, says Thomas Hugh in The Breeder's Gazette. I am a breeder of both sheep and cattle of good strains, which is the first requisite of success on the farm, and the next step is without doubt to have good forage. Grain will keep up a good condition of flesh in either sheep or cattle, but too much will cause sheep to lose their fleeces and check the flow of milk from cows. What is wanted is a forage that is fat producing, but not so heating as to have the bad effects so characteristic of corn. I am not denouncing corn fodder. I feed it extensively each year.

In Hungarian hay I find the best combination of these two conditions. For milk cows there is nothing better, and when we consider the abundant yield there is no ground for complaint on the score of expense. From six acres of the poorest land on my farm I have harvested 16 large loads of this hay. It is not coarse like millet hay, but owing to its nature and an abundant allowance of seed the hay is fine and free from weeds. I sowed three pecks on well pulverized land and worked the seed thoroughly into the soil. I consider the best time to sow Hungarian seed is from May 15 to June 10, and from three pecks to one bushel of seed sown per acre the best results will accrue.

A natural grass field is very valuable in the preservation of the feet of colts. The surface is much softer than a field that is under regular rotation, and their hoofs in consequence are less liable to become worn and splintered.

Notice of Appointment of Administratrix.

The undersigned having been duly appointed by the County Court of the State of Oregon, for Washington County, administratrix of the estate of C. A. Raymond, deceased and having duly qualified, and entered upon the discharge of her duties as such administratrix, hereby notifies all persons having claims against said estate are hereby requested and required to present them, with the proper vouchers, to the undersigned, either at her residence in Gaston, Washington County, Oregon, or at the law office of Thos. H. & E. B. Tongue in Hillsboro, Washington County, Oregon, within six months from the date hereof.

Dated at Hillsboro, Washington County Oregon this 15th day of November, 1900.

ANNA J. RAYMOND,
Administratrix of the estate of C. A. Raymond, deceased. 26-31

Wheat on Storage.

I will in a short time move the machinery of the Crescent Mill from the mill-house on Gales creek to the mill-house recently purchased at the Forest Grove R. R. Station. Those having wheat in the mill to be floured are requested to call and get their flour within the next few days. And others who have wheat on storage are asked to call at the Forest Grove bank, or at the mill on Gales Creek and arrange with me for its disposition. Forest Grove, Dec, 6th 1900. E. W. HAINES.

BAD COLDS.

Quinine is 10 years behind. Colds do not now have to be endured. MENDEL'S DYNAMIC TABULES (called dynamic from their energy) crowd a week's ordinary treatment into 12 hours and abort the worst of colds over night.

"It was the worst case of grip I ever had. A half dozen friends had sure cures. Still I hung on. Heard of the DYNAMIC TABULES. To my amazement they stopped both cold and cough the first night. I endorse and recommend them to the people." BARCLAY HENLEY, Ex-Member Congress and Attorney 101 Sansome Street, San Francisco. July 7, 1900.

"Winter colds have always been serious things to me. They are hard and stay for months. But the last was stopped suddenly by MENDEL'S DYNAMIC TABULES. Both cough and cold disappeared in a couple of days. Nothing else does this for me." MRS. EMMA L. HOLLIS, 14 Moss St., San Francisco. Aug. 6, '00.

"I live across the street from where MENDEL'S DYNAMIC TABULES are made. That is how I first took them. They stop colds without notice. I took a dozen boxes with me for self and friends when I went to Nome." H. L. VAN WINKLE, Capitalist, 3017 Washington Street, San Francisco. August 10, 1900.

Sent postpaid for 25 cents in stamps by INLAND DRUG CO., 2634 Washington Street San Francisco.

For sale at the Pharmacy.

Notice of Final Settlement.

Notice is hereby given that the undersigned, as assignee of the estate of Chas. Collins, insolvent, has filed in the Circuit Court of the State of Oregon, for Washington County, his final account, as such assignee, and that said court has appointed Monday, the 18th day of March, 1901, at 10 o'clock in the forenoon of said day, as the time for the final settlement of said estate, and for hearing objections, if any, to said final account, and to the approval thereof.

A. J. FANNO,
Assignee of the estate of Chas. Collins Insolvent. 28-32

"I have used Chamberlain's Colic, Cholera and Diarrhoea Remedy and find it to be a great medicine," says Mr. E. S. Phipps, of Poteau, Ark. "It cured me of bloody flux, I can not speak too highly of it." This remedy always wins the good opinion, if not praise, of those who use it. The quick cures which it effects even in the most severe cases, make it a favorite everywhere. For sale by the Delta Drug Store.

DON'T BE DUPED

There have been placed upon the market several cheap reprints of an obsolete edition of "Webster's Dictionary." They are being offered under various names at a low price

By

dry goods dealers, grocers, agents, etc., and in a few instances as a premium for subscriptions to papers.

Announcements of these comparatively

Worthless

reprints are very misleading; for instance, they are advertised to be the substantial equivalent of a higher-priced book, when in reality, so far as we know and believe they are all, from A to Z.

Reprint Dictionaries,

phototype copies of a book of over fifty years ago, which in its day was sold for about $5.00, and which was much superior in paper, print, and binding to these imitations, being then a work of some merit instead of one

Long Since Obsolete.

The supplement of 10,000 so-called "new words," which some of these books are advertised to contain, was compiled by a gentleman who died over forty years ago, and was published before his death. Other minor additions are probably of more or less value.

The Webster's Unabridged Dictionary published by our house is the only unobtrusive one of that name familiar to this generation. It contains over 2000 pages, with illustrations on nearly every page, and bears our imprint on the title page. It is protected by copyright from cheap imitation.

Valuable as this work is, we have at vast expense published a thoroughly revised successor, known throughout the world as Webster's International Dictionary. As a dictionary lasts a lifetime you should
