

Is Your Hair Sick?

That's too bad! We had noticed it was looking pretty thin and faded of late, but naturally did not like to speak of it. By the way, Ayer's Hair Vigor is a regular hair grower, a perfect hair restorer. It keeps the scalp clean and healthy.

"I am well acquainted with Ayer's Hair Vigor and I like it very much. I would especially recommend it as an excellent dressing for the hair, keeping it soft and smooth, and preventing the hair from greying at the ends."—SARAH J. VANDERBILT, New York.

No Mystery at All.

"Speaking of strange and unaccountable experiences," remarked the man with the bulbous nose, "I remember one that happened to a friend of mine in the summer of '93, while he was at the Columbia exposition. He was in the Fine Arts building, looking at the picture they called 'Breaking Home Ties,' when he heard a voice behind him say distinctly, 'That's what is happening at your house, over on the west side.' His friend then looked to see who it was that spoke, and there was nobody near him."

"Is that all?" asked the man with the fishy eye.

"No; the strangest part is to come. When he went home in the evening he found that his youngest brother had slipped with the hired girl and gone to St. Louis. It had taken place, too, at the exact moment when he heard the voice. How do you explain that, I'd like to know? Was it telepathy? Or what was it?"

"'Humph! Who tells that story?' 'The man himself,' like Sirhanam."

"O, Sirhanam tells it, does he? Why, you gourdhead, that's the explanation."—Chicago Tribune.

The new administration and jobbing house building erected by the W. L. Douglas Shoe Co. as a part of its mammoth manufacturing plant in Brockton, Mass., was dedicated June 19. The program included open houses from 11 in the morning until 8 in the evening. There was a musical program and refreshments were served all day. Fifteen thousand invitations were sent out including over 11,000 retail dealers in the United States who handled the W. L. Douglas shoes. Mr. Douglas says that his three large factories, also the new building just dedicated, will all ways be open to inspection and visitors from everywhere will be welcome.

The new jobbing house just dedicated will enable hurry orders for Douglas shoes to be shipped the same day they are received. The new building is 260 feet long, 60 feet wide and two stories high. The jobbing department occupies the entire lower floor and the new offices of the Douglas Shoe company occupy the entire second floor. In the new building there will be special offices occupied by the Western Union and Postal Telegraph companies; also by the telephone companies and there is an elaborate mailing department. The completion of this new administration building marks the establishment of a modern, up-to-date wholesale jobbing house and office building.

Mr. Douglas has long considered the advisability of a jobbing house, not only for the purpose of supplying his own retail stores more readily, but that the 11,000 dealers throughout the United States handling the W. L. Douglas shoes might be able to obtain shoes for immediate use with greater facility.

The new building is said to be the most complete and convenient of any ever built for a commercial house in the United States, so were the expressions of appreciation by the many persons who visited it for inspection nature. Architectural beauty as well as adaptability to the uses to which it is to be put has been the aim in construction, and the result is most satisfactory, to the visitor as well as the firm.

No Remorse.
The Young Man (at the other end of the sofa)—"Er—It isn't true, I hope, Miss Pirtle, that you told Miss Gawisp I was a—sardine."

The Young Woman—"If I did, Mr. Fairhart, I take it back. You're not the least bit in the world like a sardine. You seem to be terribly afraid you are crowding somebody."—Chicago Tribune.

Uncle Allen.
"My boy," counseled Uncle Allen Sparks, "it is a mighty serious thing to be a young man these days, and to have to make your choice between Opportunity and Responsibility. That's where a lot of you go wrong."

In the Sweet Subsequent.
Reporter—"It's to be a quiet wedding, isn't it?"

Prospective Bridegroom (prominent ward heeler)—"Yes, sir; de wedding'll be quiet enough, but we're goin' to have de gol-whoppin' shivaree dat ever was pulled off in de precinct!"

TORTURED WITH GRAVEL.

Since Using Doan's Kidney Pills Not a Single Stone Has Formed.

Capt. S. L. Crute, Adjt. Wm. Watts camp, U. S. V., Roanoke, Va., says: "I suffered a long, long time with my back, and felt draggy and listless and tired all the time. I lost from my usual weight, 225 to 170. Urinary passages were too frequent and I had to get up often at night. I had headaches and dizzy spells also, but my worst suffering was from renal colic. After I began using Doan's Kidney Pills I passed a gravel stone as big as a bean. Since then I have never had an attack of gravel, and have picked up to my former health and weight. I am a well man, and give Doan's Kidney Pills credit for it."

Sold by all dealers. 50 cents a box. Foster-Milburn Co., Buffalo, N. Y.

AGRICULTURAL

Prevents Mud Around Tank.

To prevent a mud hole forming around a watering tank a structure like this can be built. A hole or pit is dug the size of the tank to a depth of six feet and is filled with broken stones. The tank is then mounted on whatever kind of foundation desirable which can be made of brick or stone. The overflow pipe is placed in the center of the tank instead of at the sides which is usually the manner of attaching it. When the wind blows the water instead of slopping out of the sides and

PLAN FOR THE WATER TANK.

making a mud hole runs over the top of the waste pipe in the center of the tank and runs down to seep away in the broken rock and porous sub-soil. The accompanying illustration will indicate how it is constructed and the manner of disposing of the overflow water from a stock tank. It will be better to have the water line a few inches lower than the top edge of the tank so as to preclude the possibility of any water escaping and making a mud hole.

Crops Following Cow Pens.

One ought not to get the idea that a worn out piece of ground can be planted to cow pens one year and be sown to so as to raise a paying crop the following year. Cow pens renovate the soil and supply nitrogen, but they can not and do not entirely rebuild it in a short period. If one has a worn out strip of soil, he must expect to spend some time and energy on it to get it in proper condition. A plan somewhat after the following would work well: Sow five pecks of cow peas per acre broadcast and with them four or five hundred pounds of some good fertilizer, using a fertilizer more heavily endowed with potash and phosphoric acid than with nitrogen, although it should contain some nitrogen. About the middle of the summer plow the cow pens under, lime the soil heavily, five hundred pounds or more to the acre, harrow in and sow to a mixture of crimson clover and rape. This, plowed under the following spring, would give one a soil fairly good for some cultivated crop upon which a liberal quantity of fertilizer should be used.—Exchange.

Marker for Corn and Beans.

The runners of this marker for corn, beans, etc., are of ash, with pieces of oak 1x4 nailed on top. The crosspieces are of spruce, 1x3. Can mark rows 2 1/2, 3, 3 1/2 or 4 feet, with guide pole to swing either way. What makes this

NEW STYLE OF MARKER.

marker all the more valuable and really a short cut, are the cultivator teeth to the rear of each runner. These teeth are set one inch below the iron shoe of the runner and bolted fast to the 1x4 oak; they make a good, soft seed bed.

Care of Old Orchards.

The man who starts out with a young and vigorous orchard is quite likely to give it reasonable good care, for he believes that, in time, it will bring him good returns. On the other hand, the man with an old orchard, that is an adult orchard, so to speak, generally believes that its days of usefulness are over and gives it little or no care and, as a result, it amounts to but little. Experienced orchardists who have gone into the matter extensively think that the orchard which is not too old is well worth caring for and many of them have made them pay handsomely by the simple process of cultivation of the soil, pruning and spraying the trees.

Horse-Eating in Germany.

Germany ate 96,834 horses in 1905, which was 15,522 more than in 1904. Also 407 more dogs were eaten, not counting the careful statisticians add, those dogs which were slaughtered privately for table uses.

To Kill Canada Thistles.

It may be a trifle early to discuss Canada thistles, but if you are liable to forget, clip this out and put it where you can get it readily, and apply the remedy when the season comes. Put half a bushel of salt in a barrel, and hot water enough to dissolve the salt; stir till dissolved. Add water enough to nearly fill the barrel and dissolve in it one quart can of concentrated lye. Let it cool, then sprinkle freely on the thistle patch. It is claimed they will wilt and die. This ought to be effective if anything will.

Theory Not to Be Scorned.

It is safe to say that in no other profession, for farming is a profession if properly carried on, are there so few practitioners who understand the fundamental principles of their work as among farmers.

We call in a physician, and feel that if he can not tell us pretty nearly what the trouble is with the patient that he does not understand his business. We give a case to a lawyer, and if he makes a mess of it we feel, and rightly, that he is not up in his profession. We of the farm have a poor crop under normal weather conditions, and guess at the cause.

If we plow and sow we hope the soil will bring a certain return. If it does not, how many of us can tell why? The truth of the matter is, we plow and sow without much regard to why we do it, and with even less regard of what our soil needs are and whether we have supplied them.

If every soil worker in the country could take a course of one year in practical soil chemistry, there would be such a change in farming operations and results as would startle the world. We read and see many agricultural successes, and in each and every case we would find, if we investigated, that the owner of the farm was well acquainted with it—as well acquainted with the case as the successful lawyer is who wins a case before the bar. Why not begin to study the farm? It surely will pay.—Indianapolis News.

Alfalfa in Connecticut.

I took three and one-half acres of the very highest, driest and poorest section of my field, 100 feet wide and water line, and intensely cultivated it to the depth of six inches or more. Then I sowed twenty-five pounds of alfalfa seed to the acre on the 3d of June and 800 pounds of high grade fertilizer to each acre. On July 24, fifty-two days after seeding, I cut and cured 13,706 pounds of dry hay, and on Sept. 13, I cut and cured 10,850 pounds more of dry hay, or 21,610 pounds, almost eleven tons, in 103 days from time of seeding—it is safe to say three tons to the acre of dry alfalfa hay. I would not advise others to go into the cultivation of alfalfa very extensively at first, yet not I think that there are many high and dry fields in New England that could be utilized in the production of alfalfa.—George M. Clark in Farm and Ranch.

Trap for English Sparrows.

In many localities the English sparrow has become a great nuisance. To

ENGLISH SPARROW TRAP.

poison them is dangerous. To make an effective trap, buy wire screening and make a box cage. Cover the top with thin boards; make a large round hole in center, inserting a wire funnel just small enough for the bird to pass through at lower end. Bait well. The bird lighting on the cage and seeing bait through the funnel will readily pass in.

Curing Hogs of Worms.

According to Doctor Peters, a well-known veterinarian, nothing is better for worms in the lungs of hogs than creosote. It cleans out the intestinal tract. It can be administered in the following manner with the best success: Coal creosote, one ounce; water, ninety-nine ounces. One pint of water, weighs sixteen ounces. One pint of the mixture is the dose for a full-grown animal, and is the dose administered with the morning feed. If it is necessary to drench the animal, use a drenching tub made by taking an ordinary tin funnel and a rubber tube, place the rubber tube into the animal's mouth and allow it to bite on it, and pour the drench into the funnel. It is better to place a piece of metal on the end of the rubber tube so that the animal may bite on it continually without stopping the flow by pinching the rubber tube.

Heavy Draft Animals.

At a recent Missouri Association meeting, Prof. Kennedy spoke as follows about the heavy draft horse: "The heavy draft horse weighs from 1,000 to 2,000 pounds, and is worth, at a minimum, \$200. Each of the first two additions of a hundred pounds above 1,000 increases the value of the horse \$25, after which every addition in weight means \$50 a hundred pounds. So a draft horse of 2,000 pounds is worth \$500. Light draft horses, weighing from 1,300 to 1,600 pounds, are used for express wagons, fire engines and other heavy but quick work. These bring about \$125 to \$200. The high-class carriage or coach horse is worth from \$200 to \$2,000. The roadster or gentleman's driving horse, and the saddle horse vary from \$200 to \$300 respectively up to \$1,000. In the last years there has been an advance of 25 per cent in the draft horses of Iowa and Missouri.

Acting on Information Presented by Attorney General Moody.

The Supreme Court has summoned Sheriff Shipp, his deputy, and twenty-five alleged members of the Tennessee mob which lynched Ed Johnson, March 19, to appear and show cause why they should not be punished for contempt. The lynching of Johnson occurred after he had been sentenced to be hanged and after an application for a writ of error had been granted by the Supreme Court. The jail officers are accused of acting in collusion with the mob.

WASHINGTON GOSSIP

So far ten States have declined the invitation sent out by Assistant Secretary Oliver, of the War Department, to send some of their national guard organizations into camp with the regular troops this summer. Colorado has declined because the guard is too much scattered about the State to admit of easy concentration. The approaching trials for murder of the labor leaders in Idaho have made it prudent for the authorities to retain the entire force of the regular troops in the State ready for any uprising against the State authorities. Pennsylvania, Massachusetts and Ohio already have planned to have their entire national guard go into large State camps, and are unwilling to do to the expense of another camp, in going which the State authorities are meeting exactly the suggestions of the War Department, which is going to be taxed to the utmost to make the expected appropriation of \$700,000 meet all the expenses of the combined camps. California reports that the experience of the State troops in guarding San Francisco and other places devastated by earthquake and fire and the expense to the State has been put makes it inexpedient to join in the regular camping. South Dakota reports that the national guard is not equipped or uniformed for a season in camp.

A merry war is on in the House between two desiring measures, which may result in preventing the consideration of both at this session. The pure food bill, which passed the Senate, and the Immigration bill, which has not been considered in the Senate, occupy the same position upon the House calendar. These two measures, with the naturalization bill, are in form for consideration whenever the Speaker gives his consent and when appropriation bills are not claiming the floor. Some of the leading supporters of the Immigration bill oppose the passage of the pure food bill. To prevent its consideration at this session they are working to have the Immigration bill given preference. They believe they can accomplish the double purpose of temporarily defeating the pure food and of securing the passage of the Immigration bill if they are able to prevail upon the Speaker to recognize them. On the other hand, the friends of the pure food bill have primed themselves to rush it through the House as soon as Mr. Hepburn is recognized to call it up.

Another measure which will be added to the list passed by Congress because of the influence of the President is the bill to preserve the scenic beauty of Niagara Falls. The bill as agreed upon by the House committee admits the free use of water for domestic and sanitary purposes (instead of limiting it to a maximum quantity, as suggested by the international commission. William Livingston, president, and other members of the Lake Carriers' Association contend that this unrestricted use of water will result in materially lowering the levels of the lakes as soon as the Chicago sanitary canal is operating to its full capacity. They estimate that with 14,000 cubic feet of water passing through the canal each second the levels of Lakes Michigan and Huron will be lowered nine inches and of Lake Huron eight inches. This, it is calculated, will decrease the carrying capacity of each 10,000-ton boat annually \$13,500.

The Supreme Court has reaffirmed its opinion that the duties imposed on Philippine imports from this country for the date of the signing of the treaty of Paris and the enactment of the tariff law were collected illegally and that the resident lacked power to impose them, notwithstanding that Congress had ratified the previous action. Justices White and McKenna dissented. The duties to be refunded amount to about \$6,000,000 on claims already filed.

Chief Engineer Stevens, on arriving from Panama Thursday, said that the work had reached a point where it must now be known whether the canal is to be at sea level or above. He said that dredges could be gotten cheaper in Europe, but were hard to get anywhere, and cost \$350,000 each. It would take five to ten years to complete the work of a sea level canal and from eight to nine years for a lock canal. There are now between 15,000 and 16,000 men at work.

The United States Supreme Court ruled Monday that the American sugar refining company could not recover 20 per cent of the duties paid on sugar imported from Cuba between the date when the reciprocity treaty was to have gone into effect and the date of its proclamation by the President.

Rubber heels for flat dwellers at the expense of landlords is the latest innovation of Washington rental agents. There is a clause in the more recent leases of apartments requiring every occupant to wear rubber heel shoes while in the apartment. The purpose of the innovation is to reduce the noise in crowded apartment houses. In apartment houses where 20-carts are permitted it is specified that the wheels must be equipped with rubber tires.

SSS THE GREATEST OF ALL TONICS

The ingredients that enter into S. S. S. and the method of combining and preparing them so that they build up and strengthen every part of the body, make it the greatest of all tonics. S. S. S. is nature's remedy—PURELY VEGETABLE—and while it is restoring the lost appetite, overcoming that tired, run-down feeling, and other ailments common to Spring, which warn us that it is necessary to take a tonic, it is purifying the blood of all poisons and waste matters so that it can supply to the system the strength and nourishment it needs to keep it in perfect condition during the depressing summer months that are to follow.

Spring is the season when most every one needs a tonic. It is nature's time for renewing and changing; and as everything puts on new life, the sap rises in vegetation, the earth thaws out from its winter freezes, and all respond to Spring's call to purge and purify themselves, in our bodies. The blood endeavors to throw off the poisons and accumulations which have formed in the system, and been absorbed by it, from the inactive winter life, and calls upon every member to assist in the elimination. The system is often unequal to the struggle, the appetite grows fickle, the energies give way, the spirits are depressed, and a general run-down condition is the result.

Then the body must have assistance—it must be strengthened and aided by a tonic, and S. S. S. is the ideal one. Being made entirely from roots, herbs and barks, it does not disagreeably affect the system in any way as do most of the so-called tonics on the market, which contain Potash or some other harmful mineral ingredient to derange the stomach and digestion, unfavorably affect the bowels, or otherwise damage the health. S. S. S. tones up the stomach and digestion and assists in the assimilation of food; it rids the system of that always-tired, worn-out feeling, and imparts vigor and tone to every part of the body. It re-establishes the healthy circulation of the blood, stimulates the sluggish organs, and calms the unstrung nerves which make one feel that he is on the verge of prostration. S. S. S. gives an appetite and relish for food that nothing else does, and by its use we can outdo ourselves with as hearty, hungry an appetite in Spring as at any other season.

It acts more promptly and gives better and more lasting results than any other remedy, and is absolutely safe because of its vegetable purity. Dyspeptic, irritable, nervous, debilitated people will find S. S. S. just the medicine that is needed for the purification of the blood, which, from its diseased or impure condition, is causing their trouble, as well as for toning up and helping the entire system. When you take your tonic this Spring do not experiment, but get the best—the tonic with forty years of success behind it, and the one endorsed by the best people all over the country—S. S. S., THE GREATEST OF ALL TONICS. It is necessary at this time, when the system is depleted and weakened at every turn, that the right remedy be used—one that is especially adapted to the condition, and S. S. S. has proved itself to be this remedy for many years. If it is taken at the first sign of Spring the system will be so built up and strengthened that the disagreeable affections of the season will not be felt as warmer weather comes on.

AN EFFORT TO PULL THROUGH THE DAY.

I have used S. S. S. quite extensively and unhesitatingly recommend it as the best blood purifier and tonic made. I am a machinist by trade and at one time my system was so run down that by 10 o'clock every day I would be completely exhausted, and it was with the greatest effort that I could pull through the balance of the day. Since taking S. S. S., however, all this has disappeared. I am a strong, vigorous man, abundantly able to do my day's work, my sleep is sweet and refreshing, and I know further that it has purified my blood and put it in good condition. I cannot speak too highly of your great remedy, S. S. S. 817 W. Broad St., Columbus, O. A. B. MONTGOMERY.

SHE FOUND IT THE BEST SPRING TONIC.

On two occasions I have used S. S. S. in the spring with fine results. I can heartily recommend it as a tonic and blood purifier. I was troubled with headache, indigestion and liver troubles, which all disappeared under the use of S. S. S. My appetite, which was poor, was greatly helped. I can eat anything I want now without fear of indigestion, and my blood has been thoroughly cleansed of all impurities and made rich and strong again. As a tonic and blood purifier it is all you claim for it. MRS. G. WIEGEL, 771 E. Main St., Springfield, O.

On two occasions I have used S. S. S. in the spring with fine results. I can heartily recommend it as a tonic and blood purifier.
