A series of articles now appearing in the Scientific American makply to the charges against the American Navy contained in the McClure

article by Artist Reuterdahl. The first article aims to show that the various boards which have determined the characteristics of the American Navy have had a majority of their member

ship composed of sea-going officers, ontrary to the statement made by Renterdahl. The second one courralicts the statement that none of our battle ships has its main armor belt 6 iches above file water when fully quipped. It is asserted that our vesels show from 18 inches to 11 feet 6 ches of armor belt above the water ne when fully equipped. As to the alleged low freeboard of our ships, the Scientific American points out that, with the single exception of the Dreadnaught, there is not a ship in the British Navy with the forward dock 28 feet high. As to the broadside guns, the writer holds that they are as high as similar guns in the German and Japanese navies, and from 2 to 4% feet higher than those of some of the modern British buttle ships. The writer concludes that American ships in the matter of heavy armor are ton for ton

superior to the ships of other navies. The results of exhaustive experi-
