MORE RED CROSS YARN AVAILABLE VERY SOON

The local Red Cross chapter wishes to advise those who are knitting or who contemplate knitting, that yarn is being purchased and will be available in a few days. Those who are knitting for the Red Cross should obtain this yarn from the local sewing rooms, where they are charged with the amount of yarn taken out and credited with the weight of the garment returned. The local chapter was able to purchase the first shipment of yarn under \$2.50 per pound, but the last shipment cost \$2.30 a pound, and we are still able to purchase yarn at that price. All of the yarn has been purchased from the Red Cross organization at Seattle. In other words, the northwestern division of the American Red Cross has purchased yarn in large quantities and sells it to the chapters at its approximate cost. This is practically the same yarn that is being sold in the retail market at \$5 per pound.

HARMON OPENS CAMPAIGN

FRENCH SEA LOSSES LIGHT LAST WEEK

Washington, Mar. 22.—Submarine or mine sank only three French merchant ships during the week ending March 16, one over 1,600 tons and two under that tonnage. The weekly report received here records one vessel of over 1,600 tons which was sunk during the previous week, but was not included in last week's announcement.

How to Tell Age of Eggs.

There is a simple method of ascertaining the age of eggs, based upon the fact that the air space at the broad end of the egg increases with its age. Now, when the egg is placed in a tumbler of water in which any amount of common salt is dissolved, it will, with increasing age, tend ever more to assume a position with its longitudinal axis in a perpendicular direction. A fresh laid egg will lie horizontally on the bottom of the vessel. An egg from three to four days old will rise with its broad end, so that its longitudinal axis forms with its horizontal axis an angle of 20 degrees. At the age of eight days the angle increases to 45 degrees, at the age of two weeks to 90 degrees, and at the age of three weeks to about 75 degrees. When the egg is more than a month old it will float perpendicularly on its small end.

COME IN THE DAY TIME

The person who entered my premises last night, trampling down a newly planted rose bush as she did so, perfoliated all of my pink narcissus, one paper white, the only Von Blon double in bloom, and even plucked a white one from a flower pot, has my profoundest sympathy for having a nature endowed with a love of flowers coupled with too indolent a disposition to raise them. I hope to have other flowers during the summer and should my efforts prove successful and last night's trespasser again be tempted, if she will come in daylight instead of as a sneak thief at night, to save her from again becoming a criminal, I will cheerfully divide with her the results of my labor.
NELLE O. MILLER.
