GENERAL PERSHING LIVES
SIMPLE LIFE AT FRONT

Champlain, Hawaii, Nov. 25.—Correspondence of the
Associated Press. — Gen. Pershing has been
soberly and always has been a
model

Here's a piece of news
that will appeal to
the American housewife. Three
of our best known automakers
have decided to
increase
the fuel efficiency of their
models. Buick, Cadillac, and
Chevrolet have all announced
that their new models will get
better gas mileage than the
current models. This move
is aimed at reducing the impact
of gasoline prices on the
buying public, as well as
concerning the need for
more sustainable transportation
options. The new models
are expected to feature
improved engines and
efficient aerodynamics,
aimed at optimizing fuel
consumption while maintaining
power and performance. Buick
announced its new model will
achieve 30 mpg in the city and
40 mpg on the highway. Cadillac
will offer a 25 mpg city/35 mpg
highway rating, while
Chevrolet's model is expected
to deliver 28 mpg in the city and
38 mpg on the highway. Buick
also announced plans for
an electric vehicle lineup,
starting with a mid-size sedan
in 2022. Cadillac and
Chevrolet are expected to
follow suit with their own
electric vehicle models as
well. These announcements
are part of the industry's
greater push towards
sustainable and
efficient transportation,
reflecting a broader trend
across the automotive
sector.
