There are Stores in This City so good that they could use twice as much Advertising Space as they now use—and make it pay!

The better the store the better the advertising pays. Your own observations in the store-world will confirm this truth.

Publicity is bad only for a bad proposition. It is just as surely good for a good one.

What is a "good store?" One that really serves the public, protecting its patrons as to values, not merely as to prices.

There are many stores in this city answering to that definition completely. In every city there are always some stores that do not.

An important phase of a good store's service to its patrons is its newspaper advertising. This should be complete, frank, informing. It should tell the store news as fully as a good newspaper tells the news of the day.

Perhaps the best possible new policy for the good stores of this city to adopt would be that of doubling the advertising space that they use—thus giving them "elbow room;" giving them bigger opportunities for telling their patrons, in detail, about every selling event, about every bargain offering, about every dollar's worth of new stocks. Of course, even half enough advertising pay the really good store; but adequate advertising would pay much better.

Better Quality of Milk Results Where Sterilized Cans, Pails and Separators are Used.

(Prepared by the United States Department of Agriculture.)

An active campaign against the unsterilized milk can, pail, strainer cloth, and separator, as contributing causes to high bacterial count in city milk, is to be carried on this season by the United States department of agriculture in co-operation with the health and milk officials of a number of cities. Already health officers in 150 localities have accepted the department's offer to demonstrate to their local milk pro-

Each Dairy Farm Should Be Equipped With an Inexpensive and Serviceable Sterilizer Such as is Shown.

ducers a simple home-made sterilizer, costing not more than \$15, which if used on the farm will help guard the milk against this initial and serious contamination. How great a bearing sterilization of milk utensils on the farm has on the bacterial content of milk is shown by experiments which have proved that the average milk can, when washed in the ordinary way, may contain over eight billion bacteria, and that almost every milk can so treated harbors millions of bacteria which give a high bacterial count and hasten the souring of milk.

The home-made sterilizer for dairy utensils which is to be demonstrated uses steam as a sterilizing agent. All that is required to develop steam enough to sterilize the ordinary dairy utensils is a two-burner kerosene stove, and there is nothing about the device which calls for special skill in its effective use. The department has twenty of these sterilizers, described in Farmers' Bulletin 748, and has offered to supply an outfit for a two-weeks' demonstration to any local health or dairy official who will agree to show it in operation to the milk producers in his section.

The effectiveness of this sterilizer has been fully proved both in the laboratory and on the farm. In one experiment ten gallons of fresh milk were divided into two parts. Five gallons, passed through a separator into a five-gallon can, both utensils washed in the ordinary way, showed at the end of an hour 1,880,000 bacteria per cubic centimeter. The other five gallons, passed through a separator into a can, after both utensils had been washed and sterilized by means of the home-made sterilizer, showed only 24,000 bacteria per cubic centimeter.

The device, moreover, removes foul odors and leaves the utensils dry as well as sterilized. Experience shows that the bacterial count is thus materially reduced, while the producer finds that his milk does not sour so quickly and has an improved flavor.

The specialists of the dairy division are hopeful that the device, wherever it is demonstrated, will come into common use. It is believed that this sterilizer will find ready adoption among small dairymen because of its low cost of construction and operation, and because its use will tend to improve the quality and increase the keeping character of the milk.

Own First-Class Bull.

The owner of a large herd of cows can well afford to own a first-class bull, and the bull association has now made it possible for the owner of a small herd to own a share in a good, well-bred bull.

"I'd Hate to See You Fight." Sergeant R. F. Eddy, Sixteenth engineers, said in a letter received by his father, Frank M. Eddy, that a football game between the engineers and the medical corps, recently played in France, was one of the wickedest he had ever witnessed. Both sides were out for blood, and the fact that no one was injured he attributed to the hardened condition of the players, seasoned by many months of severe training.

About five thousand French soldiers witnessed the game, and afterward one Polin said to Sergeant Eddy: "If that is what you Yankees call play, I'd hate to see you fight."—St. Paul Pioneer Press.

Made Truck Driver Smile.

A Yankee truck driver's right forward wheel had just sunk with an air of finality into a half-filled shell hole on the road near Avocourt, and he was throwing over a terrific barrage of profanity when he suddenly stopped short and his jaw dropped.

Then it cased in a grin as broad as the Sacramento, from whose distant shore he had gone forth to war. He was contemplating the approach along the roadside of four stalwart and imposing officers of the famous Prussian guard. On their shoulders, as they marched along in the driving rain, was a stretcher, and on the stretcher lay a wounded doughboy smoking a cigarette.—Stars and Stripes.
