DAIRY COWS REQUIRE SALT

Best Plan to Give Small Quantity in Feed and Place Rock Salt in Boxes in Yard.

(Prepared by the United States Depart-ment of Agriculture.)

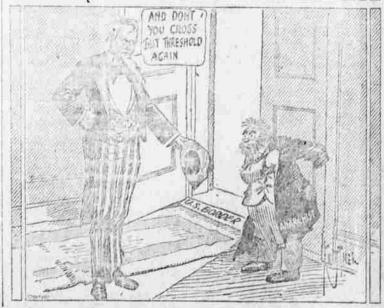

The dairy cow requires an ounce of salt a day, and while she should be given all she needs, she should not be forced to take more than she wants. It is best, therefore, to give only a small quantity in the feed and to place rock salt in boxes in the yard.

Forest Hospitality.

One morning our company was drilling, when a Boche plane flew over. We usually go into the woods when they are first sighted, but this time the "Everybody captain and lie still." Then he added: "No nee making a break for the woods. Hell see where we go and probably bomb us tonight." An acting private in the rear rank

GRANTS PASS HENS ARE WORLD BEATERS

Jealous of the far-famed pullets at the O. A. C. and disgusted with the boasting of numerous eastern chickens, a modest Grants Pass hen got busy this week and set a record that may never be surpassed. She laid an egg. And such an egg! It measured 9 1/2 inches in circumference and weighed 614 ounces. Not only that, but this hen did it up in tinsel by placing another egg inside the big one, and the egg on the inside of the record-breaker was a fullsized hen's egg and was protected by a hard shell.

There is nothing small about Grants Pass hens, although they are modest and this is a dry town. This particular hen is owned by S. A. Pottorf, 715 North Ninth street.

Miss Anna Dorin, an employee of the Packard Motor company of Detroit, who was questioned by federal agents following the arrest of Ira O'Malley, in whose possession secret plans of airplanes were found.

AMERICANS AFTER BUSINESS IN SOUTH

London, ar, 18 .- Jorge A. Mitre, editor of La Nacion, of Buenos Aires, gave Great Britain some advice concerning the extension of its trade in South America while speaking at a dinner of journalists and public men the other day.

"It may be a matter of some concern to you," said Mr. Mitre, "that Great Britain, with the control of roads, rallways and Argentina, has an inferior position to other countries in the market! Take, for instance, the case of agricultural machinery. In that line the United States is ahead of you because the American has made himself familiar with the needs and the fancies of the farmers.

"The South American people durng the next few years will have ioney to spend. There is worldwide demand for food, ours is a food exporting country, and prices are likely to be favorable to the producer. We shall want to buy not only locomotives, ploughs and ther muchinery, but motor cars, cutlery, plate, furniture, lewelry Who la and finished leather goods. going to supply us with these things?"

How Fast Shot Travels.

When standing within a few yards of a gun's muzzle at the time of dis charge, a person would be amazingly astonished were he only able to see the shot go whizzing by. Experiments in instantaneous photography prove that the shot not only spread out, commilike, as they fly, but they string out, one behind another at a much greater distance than they spread. Thus, with a cylinder min, when the

shot of a charge reaches a target that is 40 yards away, the inst shot is lagging full ten yards behind. Even a chokebore gan shot will lag belind eight yards in 40. This accounts for the wide swath that is moved in a flock of ducks on which a charge of shot falls just right. About 5 per cent only of the shot, according to the most reliable deductions from experiments. arrive simultaneously at the inrect strand at. the others lagging in the fathe named alove.
