## MASTER OF ART OF WOOING

Missourian Gives Out Some Pointers That May or May Not Be of Value to Others.

There are experts in all lines, but shall not a man who can persuade eight women to marry him rank as an authority on matrimony? According to the Missourian who is locked up in the Tombs as a confessed bigamist, the way to a woman's heart is through her higher emotions. "I appealed to the best in women always," he says, "and never to their lower natures."

Women also, this artist in love discovered, "like to be swept off their feet by those who woo them; they have no patience" with the dawdler. Nor did he find that it was essential for the wooer to be handsome or more than neatly dressed. But these, of course, are old precepts in the manual of courtship. Ugly men have often been great rakes, and ardor is traditionally effective in sweeping the reluctant fair "off their feet." His main contribution to the art of love, and it is one worthy of Ovid, is that of the potency of an appeal to the higher nature of women.

But is "the best" in women a fixed quality, or does it vary and require to be diagnosed in the individual? That is no doubt a difficulty that will confront ordinary wooers. Is the higher feminine nature compatible with matinee tickets and tea dances, or does it incline seriously only to more elevated interests? The recipe apparently leaves the problem about as it was for less successful suitors to whom the mystery remains of other men's easy mastery of an art of which they fail to learn the rudiments.—New York World.

## CAUSES OF BROKEN ROMANCE

London Newspaper Points Out Two Reasons Why Love's Young Dream is Rudely Shattered.

Engagement breaking is in season. "The marriage arranged between Captain X and Miss Y will not now take place." That cold print end to romance can be read any day now in the society columns of the papers. It is becoming a habit.

Experts who study these matters declare that the percentage of broken engagements has never been so high, and they set down several reasons. The main one is:

The great khaki illusion. (a) The woman: "You would not believe how different he looked in his civilian suit, my dear. I simply couldn't do it." (b) The man: "She was awfully charming as a driver in the Women's Legion, but when I saw her in one of the new evening gowns—well, it just couldn't happen."

The house-famine is given as another cause. Two young people who believe themselves to be twin souls go out and try to find a future home. It is physically impossible for any person's temper to stand the strain of present-day house-hunting. They quarrel, and there is another broken romance.

The oldest watch factory in the United States and the largest in the world is at Waltham, Mass.

**BAD BLOOD**

Pacific Coast Folks Testify

Sandlake, Oregon:—"I want to write a testimonial telling what Dr. Pierce's medicine has done for me. I was bothered with an ulcer on my right shin for a year. I went to a doctor here but his medicine did me no good. The sore got worse right along, so I tried a Chinese Doctor and his medicine did me good for a while, then the sore seemed to be getting worse so I tried Dr. Pierce's medicine. I took two and a half bottles of Dr. Pierce's Golden Medical Discovery and used Dr. Pierce's All-Healing Salve and the ulcer was all well before I had the medicine all used, and I recommend these medicines to other sufferers."

—MISS BERTHA HAYES.

**"For Over 40 Years"**

Tonic and Blood Builder

Chehalis, Wash.:—"I have used Dr. Pierce's medicines in my family for over 40 years and have always found them just as represented. I think Dr. Pierce's Pleasant Pellets have no equal for constipation; and the 'Golden Medical Discovery' as a tonic and blood builder cannot be beat, in fact, I can heartily recommend any and all of Dr. Pierce's remedies."

"My daughter had chronic constipation from babyhood and doctors could not cure her. Dr. Pierce's Pleasant Pellets is the only thing that ever helped her."

—MRS. JENNIE K. SWOFFORD, 1320 Alfred St.

## TERRACES WILL AVERT EROSION

Most Effective Method Can Be Employed to Prevent Washing of Soil.

## BENCH TERRACE IS ANCIENT

By Ridge Plan It is Possible to Eliminate Steep, Uncultivated Strips That Interfere With Farming Operations.

(Prepared by the United States Department of Agriculture.)

Terracing is the most effective method of preventing erosion. There are two distinct types of terraces—the bench terrace and the ridge terrace. A field of bench terraces resembles a series of benches or a flight of steps. Ridge terraces, as the name implies, are simply ridges of earth thrown up across the slopes of hillsides.

Of the two types the bench terrace is much the older. The ridge terrace has come into general use only during the last 25 years. Bench terraces for agricultural purposes were used by the ancients of Europe, Asia and South America. The ancient Peruvians in South America terraced the steep slopes of mountains, the walls of the terrace embankments being built of stone.

**Bench Terrace.**  
The bench terrace is essentially a steep-land terrace. Ridge terraces are much superior for lands of moderate slopes, as with them it is possible to

Method of Carrying Terrace Water Under a Roadway by Means of a Culvert.

eliminate the steep, uncultivated strips that interfere with farming operations and often are seed beds for weeds.

The bench terrace is usually built with the reversible hillside plow by which the soil is always thrown down the hill. This is done for a number of years until the bench becomes level or the slope of the bench is slightly reversed. A ridge of earth is kept at the outer edge of the bench to prevent the surface water from running from one bench to the next bench below. Bench terraces should be level; that is, they should have no fall along the direction of their length. Before the bench between the terrace embankments is made level by plowing the soil down the slope the surface water is held above the shoulder at the outer side of the bench. Part of the water may move off slowly to the ends of the terrace and the rest will either sink into the soil or evaporate. A heavy sod should be kept on the shoulder and embankment to prevent erosion should the shoulder be overtopped due to heavy rain.

When a bench terrace is first started, the shoulder should be built about one foot high and three feet wide at the base. These dimensions can be reduced some as the leveling down of the bench proceeds. When the bench has become level it is only necessary to maintain a small shoulder about one-half foot high at the outer side of the bench. This will prevent possible damage to the terrace due to an excessively heavy rain.

The distance between the terraces is governed by the vertical distance or drop and not by the distance along the surface of the ground. The distance along the surface of the ground will be different for different slopes of the land where the same vertical distance between the terraces is used.

The proper drop or vertical distance between bench terraces depends largely on how much care and attention is given to the terraces, the greater the drop the more care required. The greater the drop the higher will be the embankment, and it is much more difficult to maintain a high than a low embankment. The best practice indicates that the drop between bench terraces should never be less than three feet nor more than six feet, although a drop of eight feet has been used successfully on steep slopes where the terraces are carefully maintained.

## NOTICE

All persons knowing themselves to be indebted to the Grants Pass Lumber Co. will please call and make payment of accounts before February 1st so that we may close our books by that time.
