A woman's fondest hope is to stay young. She often resorts to paints, powders and cosmetics to hide her years. Some women pay large sums to so-called "Beauty Doctors" in the belief that money will buy youth. Others wear girlish dresses, thinking they can fool the world about their age. But no one is deceived. The more you try to hide your age, the more it shows.

There is but one thing that holds old age back, and that is health. Sickness and weakness bring old age early in life. Dr. Pierce's Favorite Prescription is a building-up medicine for women. It makes them healthy and strong when they suffer from women's troubles. It keeps them looking young by keeping them well. It is a woman's tonic for the frail, the delicate and those who are nervous, dizzy and who have backache and dragging pains. Favorite Prescription is altogether vegetable and without a particle of alcohol. It is safe to take. Try it now. In tablet or liquid form at all druggists, or send 10c for trial package of the tablets to Dr. Pierce's Invalids' Hotel in Buffalo, N. Y.

ANOTHER TRIUMPH FOR AUTO

Southwest's Most Dreaded Spot, Death Valley, Has Been Made Safe for Travelers.

Death valley, once the terror of the traveler in the Southwest and the last resting place of many early-day prospectors, is being made safe for travel both day and night.

This erstwhile barrier to human progress has been conquered by the automobile. Its trackless waste of sand has been sign-posted and its hidden water holes marked by Uncle Sam. Not content with merely making the desert easy to cross for travelers in daylight, the Automobile Club of Southern California is going farther and is placing signs in such manner that the rays of the headlights from passing machines will fall upon them and guide the night tourist as safely and surely as the day traveler.

The Automobile club also will signpost all lateral routes of the famous Death valley district. Included in the sign posting being done will be a complete set of road signs directing tourists to picturesque Palm canyon, on the edge of the desert—one of the most unique spots in the world.

This oasis in the sandy wastes is to be made a national monument by the government. Its distinctive feature is the presence of ancient palms of weird beauty, standing in straight rows, apparently planted by the hand of man, but antedating history of the first human beings in this section.

Ossian

Ossian, a mythical Gaelic hero and bard, is said to have lived in the third century, and to have been the son of Fingal, a Caledonian prince and hero, whom he accompanied on various expeditions. The story goes that Ossian was carried away by his fairy hind-mother to the "isle of the ever young," but he returned later, and then old, blind and alone. "Ossian after the Feinn," he told the story of the heroes to St. Patrick. In 1760-63 James Macpherson published two epics, which he claimed to be translations from Ossian's poems.

Stern Critic of Education

The teacher had sent numerous notes in vain endeavor to get Johnny bathed and cleaned up. There was no reply and no visible improvement in the boy's appearance, until at last the mother, driven to desperation, sent the teacher a long letter saying, among other things: "What is it to the teachers whether the children in their schools have a bath once a day, or once a week, or once a month, or once a year? They are washing the sap all out of the children, and that is how so much tuberculosis gets started."

LIVE STOCK

USEFUL ANIMALS FOR FARMS

Department of Agriculture Assisting in Improvement of Horses in Range Country.

The United States department of agriculture has bred and developed several stallions in its horse-breeding project now located at the U. S. Wyoming Horse Breeding Station, Buffalo, Wyo. The stallions will be leased to private breeders and community breeding clubs for the breeding seasons. In this way it is proposed to assist in the improvement of the light horse stock of the range country where

Defender, Ten-Year-Old Bay Stallion—Photograph Taken at Wyoming State Fair.

stallions of merit are not available and in those sections where light horses are preferred.

The number of available stallions is limited to about 10, as only the best of those produced have been retained or will be allowed to go out for public service. These stallions range in height from 15 hands 1 inch to 16 hands 2 inches, weigh from 1,500 to 1,400 pounds, and in nearly all cases are tried sires and known producers.

The object of the work at the station in which these horses are being produced is the preservation and development of a utility horse suitable for range and farm conditions. The points especially emphasized are the development of size, soundness, tractability, action and stamina. In a useful animal which can be used under the saddle, on the road, or in the field.

Persons interested should address correspondence to the Wyoming Horse Breeding station, Buffalo, Wyo.

EARLY BREEDING ADVOCATED

Lambs Born in Spring Get One or Two Months of Mothers' Milk Before Fighting Worms.

Early breeding, in order that lambs may be old enough to offer strong resistance to worms when they are turned on pasture, is advocated by the Nebraska College of Agriculture. Ewes bred in October and November will lamb in March and April. This will give the lambs from one to two months on their mothers' milk and on grain before they have to combat worms. The principal objection to early lambing is the necessity of having a good barn. However, the expense and trouble from early lambing are more than offset by the ability of the lambs to survive the worm season. Extra feeding of ewes during the breeding season is urged. Well-fed ewes are more likely to produce twins.

TEETH OF CATTLE ARE LOOSE

Nature Intended Them to Be So to Prevent Injury to Jawbone in Cutting Off Grass.

The incisor teeth of cattle project forward and their upper surfaces come into contact with the "dental pad" of the upper jaw. Grass is cut off by the cow grasping it and jerking the head upward, thereby cutting it with the sharp edges of the incisors. If the incisors were firmly fixed in the jawbone injury to the dental pad would frequently occur. Don't worry when you discover that the cow's front teeth are loose. Nature intended them to be so.

LIVE STOCK NOTES

Quarantine your hog lots when cholera is in the locality.

Every pig lost at farrowing time lessens the chance of profit.

Alfalfa meal fed to breeding hogs helps to save high-priced grain.

Young hogs should be separated from their mates at or before five months old.

Don't be afraid to sit up all night when the pigs are coming. You will be well paid for it.

Keep cholera away by having everything clean about the yards and buildings. Use disinfectants.

In these days of high-priced feed it does not look like good business to feed brood sows all winter and then through carelessness or neglect permit them to lose most of their pigs.
